

74 F 74-1

December 16, 1958

C Dr. [REDACTED]

Dear [REDACTED]

Thank you very much for your accounting. It meets our purposes fine. We are looking forward to seeing the complete publication and are awfully pleased that we were able to help in its preparation.

Best wishes for the holiday season.

Sincerely,

C [REDACTED]
Executive Secretary

C
B
[REDACTED]

C Dear [REDACTED]

B Please find enclosed herewith my report on the \$1,500 grant so generously awarded by the [REDACTED]. I think good use has been made of it. It was of tremendous help in furthering my work.

May I thank you personally for your interest and help in this matter?

B I am enclosing - as a sort of supplement - a mimeographed copy of the report I made to the [REDACTED] for an earlier grant of \$1,000.00 for the same purpose. It gives an even more detailed outline of the type of work that was done also under the [REDACTED] grant.

With kindest personal regards and many thanks - and wishing you a very merry Christmas and a happy New Year,

C
Sincerely yours
[REDACTED]

Encl.

REPORT ON GRANT

74-2
5

The sum of \$1,500.00 granted for the paying of assistants, typing, photostating and bibliographic work on a TREATISE ON [REDACTED] HAS been paid out to the following persons:

- C [REDACTED] Ph.D. 1283.30
- C [REDACTED] Ph.D. 167.70
- C [REDACTED] Dr. juris 49.00

C The sum paid to Dr. [REDACTED] was exclusively for bibliographic work. Its purpose was to index material already in my files, to insure that it would not be duplicated by Dr. [REDACTED] in searching for new material.

C The sum paid to Dr. [REDACTED] was chiefly for work, looking up data in languages in which Dr. [REDACTED], main research associate, was not fluent. The remainder of the sum paid to Dr. [REDACTED] was for the photostating of relevant material, at current rates. She was originally given a check for \$200.00 of which she returned, as unused \$32.30.

C The sum paid to Dr. [REDACTED], my main research associate, was largely for looking up and copying new items. The rest was for photostating articles and lengthy excerpts. I might say that he did superlatively well, working hard, conscientiously and with imagination. I permitted him to use some of the [REDACTED] material he so ably located for a paper on [REDACTED] Hysteria, which he presented at the [REDACTED] Meeting in [REDACTED] and will publish, with credit to the [REDACTED]

C The money granted yielded an estimated 5-700 items, varying in length from a few lines to full length (photostated) articles. It permitted me to fill various large gaps on the map, chiefly on the [REDACTED] on which I had very few data.

C After utilizing this material in my TREATISE ON [REDACTED] it is my intention to make it available to other workers by placing it in the files of whatever Institution I happen to be associated with at a given time. Should I move from one Institution to another, I will, of course, move also the Files, since I am sure I will use these data again and again all my life, for various purposes.

C Any publication in which these data are used will give due credit to the [REDACTED]. I am personally deeply indebted to the [REDACTED] and its officers for this grant, which materially furthered my work. I am sure that, in addition to the TREATISE, there will be many articles, dealing with special problems, in which I will be able to acknowledge my appreciation. Last, but not least, I will have ample opportunities to use these data in lectures and in courses. I have, in fact, already used these data in that way.

I have examined and approved the submitted expenditures.

C Respectfully submitted

A [REDACTED] B [REDACTED] Ph.D.

C B

REPORT ON GRANT [REDACTED]

Purpose: Grant [REDACTED] was requested for the purpose of securing the services of a research associate, to locate, copy and photostat data on [REDACTED] in preparation for the writing of a TREATISE ON [REDACTED]

Summary Statement of Progress: Having been able to secure the services of [REDACTED] Ph.D., it was possible to locate, copy or photostat some 500 passages and/or articles dealing with [REDACTED]. The average cost per item located and copied was \$2.00. This low per-item expense was largely due to Dr. [REDACTED] exceptional efficiency and interest.

List of Results:

- (1) The 500 items located increased the quantity of data already in my files by some 20 per cent.
- (2) It was possible to fill in gaps in the file, regarding [REDACTED] or areas from which no data had been collected previously, most conspicuously as regards [REDACTED] among the [REDACTED].
- (3) The data collected under Grant [REDACTED] strongly supported the basic thesis that [REDACTED] are present in all [REDACTED] and, despite external variability, have the same psychodynamics.
- (4) They permitted the more precise definition of the dynamics and classical symptomatology of several [REDACTED] which are largely pre-patterned by [REDACTED].
- (5) The [REDACTED] data in particular forced me to revise my earlier hypothesis that nearly every patient who has an [REDACTED] (such as [REDACTED]) displays the complete repertoire of [REDACTED] prescribed or available symptoms. Actually, each individual [REDACTED] selects from this repertoire a set of symptoms fitting the idiosyncratic aspects of his own [REDACTED]. This finding led to the formulation of the [REDACTED] concept and provides an effective means for differentiating, in a concrete case, between [REDACTED] aspects of the actual illness. Such a differentiation is of considerable import, both theoretically and clinically.

Publications: Ultimately all of this material is destined to be used in a TREATISE ON [REDACTED] to be completed in the course of the next two years and to be published by [REDACTED]. In the meantime I gave permission to my research associate, Dr. [REDACTED] to use the [REDACTED] data he himself collected for us, to write a paper on [REDACTED] which he will read this month at the Meeting of the [REDACTED] and will publish, with credit to [REDACTED]. I have already used some of the material in lectures at [REDACTED] and [REDACTED]. I will use them further in the near future in courses and lectures at [REDACTED].

[REDACTED] The material also influenced indirectly my thinking in my forthcoming big book on [REDACTED] and in my paper [REDACTED].

though no part of these two works was financed out of Grant [REDACTED] or uses material collected under that grant. I am saving the material for the aforementioned TREATISE ON [REDACTED] which will duly acknowledge Grant [REDACTED] as will any paper I may write in the interim.

~~TOP SECRET~~

DRAFT / [REDACTED]
21 April 1958

MEMORANDUM FOR: THE RECORD

SUBJECT : Individual Grant under Project MKULTRA
Subproject 74

1. Subject to the approval of Chief, TSS, the Board of

B Directors of the [REDACTED] has

C recommended that a grant be made to Dr. [REDACTED] to
partially defray the cost of publication of his "Treatise on [REDACTED]"

C [REDACTED] as indicated in the attached proposal.

2. Financial participation in the above described activity

B will, in the opinion of the Board of Directors and TSS/CD, materially
aid in authenticating the cover of the [REDACTED] and in addition will provide

C a source of reliable background information on [REDACTED] of interest
to the Agency in various areas of the world.

3. The total cost of this grant will amount to \$1500.00 for

a period of one year beginning 1 May 1958. Charges should be made
against Allotment 7-2502-10-001.

B 4. The grant will be handled through the [REDACTED]

[REDACTED] as a cover grant and
sufficient accounting therefore will consist of evidence of disbursement

B of the funds by the [REDACTED]. No purchase of equipment is involved in
the project.

[REDACTED]

5. No cleared or witting persons are concerned with the
conduct of the project.

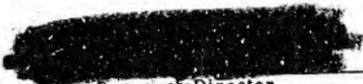

A.

Chief
TSS/Chemical Division

APPROVED FOR DISBURSEMENT
OF FUNDS:

Date: 23 April 1958

Attached:
Proposal

Distribution:
Original only

January 17, 1958

C
B
[Redacted]

C
Dear [Redacted]

Pursuant to our conversation I would like to apply for a grant of \$1,500.00 in connection with my research in [Redacted] and especially in connection with the preparation of a treatise on [Redacted]

If the grant is made, the money will be devoted exclusively to the following purposes:

- (1) Payments to a research assistant who, working under my direction, will track down and copy (or abstract) data bearing on [Redacted]
- (2) The photostating of material of the aforementioned type.
- (3) The translation of such material from Slavic, Scandinavian and Asiatic languages.
- (4) The checking of the accuracy of bibliographic references already on file.

No part of the grant will be charged to overhead or to any other item except the four listed above.

I have at present in my files:

(1) Factual data: Some 5,000 excerpts (a conservative estimate) consisting of:

- (a) All relevant data from the [Redacted] files. (Approximately 1000 typewritten pages.)
- (b) Some 500 pages collected under a grant from the [Redacted]
- (c) All data collected by the [Redacted] which were given to me by the [Redacted]. These data overlap in part with (a). Data not duplicating (a) estimated at 100 typewritten pages.
- (d) An estimated 150 typewritten pages of data I collected from my readings between 1935-1958.
- (e) My own exhaustive field material on the [Redacted] and [Redacted] of the [Redacted]. A 200 typewritten pages monograph on [Redacted] has been completed and was accepted for publication by the [Redacted]
- (f) My own field work data on [Redacted] and [Redacted] among the [Redacted]. (Estimated amount of raw, unpublished data: 150 pp.)

B
B
C

C

C

(2) Bibliographies:

- (A) A bibliography of some 500 typewritten pages made up of:
 - (a) Items I collected since 1935.
 - (b) Bibliographies placed at my disposal by the following colleagues: Professors [redacted] (the latter

has been published in the meantime).
(B) The bibliographic materials contained in the factual excerpts, which do NOT overlap to any extent with (A).

NOTE: Item (A) covers not only [redacted] but also [redacted] and [redacted]

(3) Reprint File: of several hundred items, including some photostated articles.

(4) Books devoted to [redacted] or containing relevant material in appreciable quantities.

I have already done a considerable amount of writing on [redacted] subjects; more than 2/3 of my 5 published books and 100 articles deal with various [redacted] problems. I would like to mention especially [redacted]

As regards the Treatise on [redacted] itself, a number of the chapters are already available in rough drafts or are partly outlined.

Publication: I signed a contract with [redacted] for the publication of the Treatise.

File: After completing the Treatise, it is my intention to make my organized files available to other research workers, by depositing them with a suitable institution, or allowing one or more institutions to photostat them and place them in their libraries.

I would like to say that - apart from the \$1,000 grant from the [redacted] - I have so far spent over the years something like \$2,000 of my own money on this project, of which \$600 were spent in 1957 and about \$500 (the entire advance royalties from [redacted] in 1953).

Assistant: Most of the grant applied for will go to pay for the expert services of [redacted] Ph.D. [redacted] who has been working for me since about a year ago.

I enclose a tentative table of contents of the proposed Treatise on [redacted]

Respectfully submitted

[redacted signature block]

C

17 April 1958

C,
B

C

Dear [redacted]

Thank you very much for your letter of 11 April and the enclosed check for \$5,000.00. I have turned the check over to the University, and it will be held in the Business Office to pay the [redacted] participants. I certainly appreciate the consideration the [redacted] has shown us in not calling for any particular accounting.

B
B

I have reworked the summer budget this morning and am not quite sure how things will turn out. I am hoping that we can pick up the extra \$400.00 to pay one of the three [redacted] people as a consultant. My feeling is that we should let it rest for the moment, and if there is a pinch, I may come screaming to you for the extra money.

B

The prospectuses from the various participants are beginning to flow in, and I shall send you a complete set, I hope, before the end of this month.

B

Once again may I express the appreciation of both the [redacted] and of myself personally for your very kind support.

Best wishes to you, and I hope that we may be able to see you sometime during the summer.

Sincerely yours,

C

Decr [redacted]

Your letter arrived this morning with the proposal from [redacted]. It seems to be adequate for my purposes, but you push me a little for time. I will process it as quickly as I possibly can.

I will let you know as soon as I have received word from my Directors.

Sincerely,

C [redacted]
Executive Secretary

A [redacted]
C [redacted]

This proposal @ 5M has much to recommend it in terms of establishing foundation affairs solidly, recruiting a bright young [redacted] crew, and getting at some interesting aspects of social science research to add to assessment study. Have sent to Directors - will recommend soon because [redacted] wants to hear by early Feb.

Proposed Activities of [REDACTED] Group
at Behavioral Sciences Conference
[REDACTED]

Participants

C [REDACTED], Associate Professor of Sociology
[REDACTED], Associate Professor of Psychology
[REDACTED], Assistant Professor of Psychology

(See each member's application to the conference for a description of his background and research interests.) Possible part-time or full-time additions:

[REDACTED]
[REDACTED]
[REDACTED]

General Problem and Approach

Our group would like to explore the relations among cognitive processes, interaction processes, and cultural processes as these relate to the development of shared meanings and values. Our projected summer activity would be directed at the formulation of a specific research proposal for long-term investigation of critical aspects of this general problem. The summer's work would consist of three phases: exploration of relevant literature, formulation of key problems, and design of research. These phases would be related through periodic seminars throughout the two-month period, at which each member would present for group discussion the results of his individual activity up to that time. The initial and final seminars would aim at relating individual concerns to the group

[Handwritten scribble]
B,
C

Specific Topics for Investigation (These will be elaborated and formulated more precisely as the summer's work progresses.)

1. The sharing of meanings and values: what is meant by this phrase; how is "sharedness" measured?
2. How does sharedness come about? What are the social and psychological factors which facilitate or impede the acquisition of shared meanings? More specifically:
 - a. What personality characteristics of the individual dispose him favorably or unfavorably toward participation in group consensus?
 - b. What are the perceptual and cognitive processes by which the individual identifies (or infers) cognitive characteristics of others, so that meanings may be shared?
 - c. What characteristics of the interaction process facilitate or impede the development of shared meanings and values?
3. What are the consequences of a group's acquiring, or failing to acquire, shared meanings and values?
 - a. Consequences for the individual member's cognitive structure.
 - b. Consequences for the interaction process, and for members' reactions to it.
 - c. Consequences for the cultural products of interaction.

Projected Time-schedule for the Summer

_____ and _____ will plan to be in _____ for the full eight weeks. _____ is about to deliver another psychologist, so will be doing most of his individual work in _____, but will

plan to visit ██████████ H twice for participation in intensive seminar meetings at these times. The group work-schedule is arranged accordingly:

Spring semester (prior to the conference): Periodic discussions to lay out topics for study.

Weeks 1-5 at ██████████: Review literature on topics of individual and collective interest. ██████████ will join ██████████ and ██████████ for part of the third week to discuss initial findings and future directions.

Seminar will be held twice a week.

Weeks 1-1: Gradual formulation of conceptual framework on basis of reading and discussions.

Weeks 2-8: Formulation of specific problems within the general area and development of research designs relevant to theme.

Seminar will continue twice a week; ██████████ will join the group for the entire sixth and seventh weeks to participate in general review and formulations.

[REDACTED]
January 24, 1958

MEMORANDUM TO: THE DIRECTORS

SUBJECT: Project Proposal

After considerable informal negotiations with the [REDACTED] group, the attached proposal was submitted as an expansion of the [REDACTED] program in personality description.

While it is obvious that the short period of time will not permit definitive research to be accomplished on such a complex problem as [REDACTED] I feel that the group has done sufficient work on this problem area to be able to make a significant contribution to our efforts. The small cost of the proposal argues for favorable consideration of the grant.

C
Dr. [REDACTED]B
C
Dear [REDACTED]:

Please excuse the delay in forwarding this proposal for our team's work this summer. I have had a fantastically full schedule of visitors and meetings this past week, which has just eased temporarily this morning. [REDACTED] and I have discussed our joint problem and feel that our separate interests will fit well into it. I present the area of investigation as a totality, although each of us will be predominantly concerned with different major aspects of it. We have discussed with [REDACTED] and [REDACTED] the possibility of their joining us for part of the session, and they seem favorably disposed, providing their other commitments can be worked out. You will probably hear directly from them about this. We would certainly be delighted to have them as either central or peripheral team members.

C B I trust that the proposal will be sufficiently informative at this time for [REDACTED] to judge its relevance to the [REDACTED] concerns. We would be happy to answer further questions about our plans, as soon as they become more specific. Good luck on your efforts to expand the [REDACTED] in this way. We will look forward to joining the Conference this summer in one way or another.

Sincerely,

C
[REDACTED]
Assistant Professor

[REDACTED]

[REDACTED]

[REDACTED]

22 January 1958

[REDACTED]

Dear [REDACTED]

I have received in today's mail the prospectus of the proposed activities of the [REDACTED] group. As you will notice, the participants are [REDACTED] and [REDACTED] from the [REDACTED]. They mention that they would like to bring in as part-time or full-time participants Drs. [REDACTED] and [REDACTED]. I am enclosing a copy of a letter from [REDACTED] concerning the proposal.

I have set a cut-off date for the final receipt of applications as February 10, and [REDACTED] agrees with me on this date. We intend to process the applications the following week-end, preferably the 15, 16 and maybe the 17th. Therefore, it is highly imperative that I receive a definite commitment from you before the 10th of February as to whether you will pick up these people. As I mentioned to you, the cost would be \$2000 per man. The way I figure this now would be as follows: \$2000 for [REDACTED], \$2000 for [REDACTED] and \$500-\$1000 for [REDACTED] depending on whether he comes in for two to four weeks. Since he said he could only be in part-time, it would be prorated according to the number of weeks he spent.

Regarding the participation of [REDACTED] and [REDACTED] I shall wait to hear from them, according to the information in the enclosed letter from [REDACTED]. If I do not hear from them shortly, I will write to them.

We have applications from what amount to about fifteen firmed up teams. Since the date is so late, which would prevent getting a proposal such as that by the [REDACTED] group, I would like to ask if you would be interested in picking up another team. In this case, you would have to trust my judgment, or rather that of the selection committee, who would be made cognizant of the purposes and aims of your organization. Knowing these purposes and aims, I could very well guarantee you a top notch group.

In any case, as I mentioned above, I must have a firm commitment from you regarding the [REDACTED] group. You now have the exact monetary costs for the team from [REDACTED]. Please let me know your reactions at once.

Very sincerely yours,

[REDACTED]

C
Dear [Redacted]

C
C
C
C

Enclosed please find a proposal which has been put forth by Prof. [Redacted] of our Department of Government at this University, Prof. [Redacted] of the College of Business Administration, and Mr. [Redacted] who is employed as an industrial psychologist at [Redacted] in this city.

C
C
C
C
C
C
C
C
B, C

[Redacted] has a very good background in political science and labor economics, having received his Ph.D. from the University of [Redacted] in 1949. He is an associate professor here now and has a good publication background. [Redacted] received his Ph.D. in 1953 in business economics and political science. He is assistant professor of industrial administration and has been administering a project requiring study of the [Redacted] and [Redacted] of the [Redacted]. He has a good general knowledge of individual and group behavior patterns and the norms by which these are measured. [Redacted] has completed all his requirements except language and thesis for his Ph.D. at [Redacted] and is now engaged in industrial psychological research at [Redacted] which, as you know, is the [Redacted] and a [Redacted]. He has no formal publications.

C
C
B

These three men would work together closely on the problem presented in the proposal. I do not know, frankly, too much about [Redacted] and [Redacted] but I do know that [Redacted] is an exceedingly hard worker and commands a great deal of respect in the field of political science. If you wish to pick these three men up, the cost to your group for the summer would be \$2000 per man, or a total of \$6000 for the summer. As with the case of the [Redacted] proposal, which I sent to you, I would very much like to hear from you about this group by February 10 if this were at all possible. I realize this is rather short notice, but of course you understand the exigencies of the situation at this time. Please let me hear from you.

Sincerely yours
C

Comments on Proposal submitted by:

C [REDACTED] Ph.D.

These comments are by: A. Dr. [REDACTED]

The proposal is modest enough, but the research does not seem too well planned from a methodological point of view. But, it is somewhat typical of psychoanalytic approach. It would probably be acceptable to that school. I can't feel very excited, but [REDACTED] may eventually be an important person for us to know.

A. [REDACTED]
June 19, 1961

An Exploratory Study on the
Effects of Circumcision

Statement of the Problem:

The aim of this research is to investigate the effects of Circumcision on the emotional state of [redacted] children in a [redacted] culture. In the [redacted] religion and specifically among [redacted] people, boys are generally Circumcised between the ages of [redacted] and [redacted]. Although the operation is in itself a minor one from a surgical standpoint, psychoanalytic observations of children of [redacted] cultures would suggest that it is apt to activate strong fears and anxieties in the child.

The psychological significance of surgical procedures in childhood is now generally recognized. Helene Deutsch found evidence in the analysis of adult patients that operations in childhood leave indelible traces on the psychic life of the individual. A study carried by Jesmer, Elen and Waldfoegel has demonstrated the stressful effects of tonsillectomy and adenoidectomy on children. The emotional impact of circumcision has not yet been dealt with. A study of its effects thus becomes meaningful particularly because of its specific phantasy implications- notably in terms of castration anxiety. The immediate goal of the research is to investigate how [redacted] children, of [redacted] religion, react to this operation.

The study raises a variety of interesting questions revolving around the universality of orthodox psychoanalytical conceptions and the specific role of cultural adaptation patterns for understanding these conceptions.

According to Freud, the male child, at about age five, is under the impact of castration anxiety. At this developmental stage, he experiences strong love feelings towards his mother and fear of his father (conceptualized as the oedipus complex); the discovery of sexual differences between boys and girls raises the expectation of castration for himself as a punishment for forbidden wishes towards his mother. Clinical observations by psychoanalysts indicate that the fear of castration is sufficiently strong to make the child turn away from the oedipal wishes. This resolution ushers in a new developmental stage - the latency period.

Freud proposed that these developmental stages and their accompanying fears and phantasies are universal, although neo-Freudian "culturalists" argue that divergent family patterns will make for divergences in the quality and degree of such phenomena. The proposed research, to be carried out with **F** children who are very much different from the **[redacted]** that Freud observed, can offer much data on the specific patterns of anxiety, and its possible meanings in terms of castration, generated by circumcision in a group where circumcision at the oedipal age is very much the norm.

The broader aim of the research is to throw light on the forms and methods of adaptation a culture offers in coping with the occurrence of a severe threat in childhood - whether or not this is experienced specifically as castration. It is expected that aspects of the personality of **[redacted]** **F** as compared to persons from cultures where circumcision is not practiced or is performed in infancy, will show distinctive modes of adaptation to anxieties about body image.

Procedure:

In this first exploratory study, 15 children between the ages of 5-7 will be used. The sample will be collected through the courtesy of a national **[redacted]** health service called **[redacted]** which organizes the circumcision of

children from low-income families.

Prior to the operation, the children will be given the Rorschach test, the Draw-a-Person Test and other projective devices (Incomplete Fables and Pictures, TAT). The same children will be re-tested following the operation. The two sets of protocols will be compared in relation to: 1) the general effects of the operation of the anxiety level of the child, and 2) the specific way in which the operation is perceived by him, i.e., his phantasies about what "really" was done to him, and why. The data will be examined for cues to cultural patterning of effects.

Implications for Further Research:

F

1) In ~~some~~ countries, children are rarely prepared in advance for this minor operation. If the child knows anything about it, it is through information picked up from playmates. Thus there is an interesting problem of how the child would react to the same operation after a period of quasi-psychotherapeutic preparation, and how such "rational" preparation clashes and coheres with built-in ways of handling the anxiety via the total culture.

2) In psychoanalytic theory, the inability to resolve the castration complex is linked with later emotional disorders, notably, for example, homosexuality. It would therefore be valuable to compare the psychological state of the circumcised child after a period of time, as a function of his initial reaction to surgery.

Subjects

The research is conceived of as an exploratory study. At present, a request for 500.00 dollars is made. An estimated budget is as follows:

71-13

Fees to subjects: \$2.50 per session (2 sessions min.)	:	\$ 75.00
Testing expenses: \$ 10 per session (2 sessions min)	:	150.00
Analysis of Data and Write-up		250.00
Additional expenses (ex. travel, office arrangements etc.)	:	<u>25.00</u>
		\$ 500.00

Memorandum to: ^{A.} [redacted] ^{C.}
Subject: Recommendation for Funding [redacted] ^B

Enclosed is a brief proposal from the [redacted] for the detailed analysis of some 200 questionnaires and interviews on attitudes of students in [redacted]. A sample of the interview is enclosed.

B.C
B.C
C
B.C

The substance of the questionnaire largely pertains to attitudes towards [redacted] and might properly be called a propaganda intelligence activity, more appropriately undertaken by the [redacted]. However, informal conversations with [redacted] lead me to believe that the analysis will attempt to look beneath prevailing attitudes and provide a fairly careful documentation on dynamics of social change in this [redacted] area. In this regard, the methodology becomes extremely interesting. It is proposed that the request for \$1,000 be approved from Small Grants in order to permit exploitation of this material previously collected at great expense.

C
Dear Mr. [REDACTED]

C
C
C This is just a note to let you know that I have now officially received [REDACTED] grant for one year's study in [REDACTED]. My plans remain as I explained them in my last letter.

C [REDACTED]
Sincerely yours,

B

April 24, 1951

C
B

C

Dear Mr. [REDACTED]

I am very glad to learn that the [REDACTED] may be able to provide supplemental support for my program. It seems quite certain that a [REDACTED] grant is forthcoming since, although an official announcement must come from the [REDACTED] in [REDACTED] inquired about the feasibility of my research program and at the same time indicated that I had been recommended for the grant.

B

If the [REDACTED] cannot complete action on a grant until July of August, this would be no real problem since I have sufficient funds to get started. I plan to leave for [REDACTED] on June 15 and arrive in [REDACTED] around July 15. My temporary address there is in care of [REDACTED]

Kr. [REDACTED]

C

Dear Kr. [REDACTED]

C

This is the current status of my various applications. The [REDACTED] should notify us whether I have been appointed by April or May, but perhaps later since mine was a late application. If I do not get a [REDACTED] or other grant I will still be able to carry out my project since the [REDACTED] is willing to pay my travel and maintenance as part of my wife's grant. In this case my application to you for a supplemental grant could be reduced by the \$5000. I had requested for six months additional maintenance, assuming that they are generous about extending a one year grant.

BC
BC

BC
BC

I have also applied for a private grant through the [REDACTED] which should be announced around April 1. The decision on a [REDACTED] application which I am in the process of submitting will not come until July.

Sincerely yours,

C

[REDACTED]

[REDACTED]

March 11, 1961

[REDACTED]

Here is my application for a supplemental grant from the [REDACTED]. I am now a little more certain about my sources of support than when I last saw you. Last week the [REDACTED] turned me down in their [REDACTED] program. However, in February the [REDACTED] asked me to file for a regular [REDACTED] and this application is now at the level of the [REDACTED]. The question here will be how the [REDACTED] looks upon my proposal. The answer to this won't come for several months.

Last weekend I met a [REDACTED] who has an unusual enthusiasm for behavioral science research in the field of public administration. He wants to compare the value systems of [REDACTED] administrators to those required for a rational bureaucratic system. I'm sure we can be of great help to each other in [REDACTED].

I will let you know of any other significant developments concerning my project.

Sincerely yours,
[REDACTED]

December 5, 1960

Memo to [REDACTED]

Subject: [REDACTED]

Last June 1960, it was thought that Dr. [REDACTED] was going to [REDACTED] and at that time a project was submitted for the completion of a report on the work accomplished by Dr. [REDACTED] and Dr. [REDACTED].

At the last minute, Dr. [REDACTED] persuaded Dr. [REDACTED] to stay with him at [REDACTED]. Dr. [REDACTED] was on the [REDACTED] payroll and was entitled to a month's vacation. However, it was agreed that Dr. [REDACTED] would work on his report during his vacation and we agreed to pay him \$1,000.00, a month's pay, for working on this report.

Do you want to reimburse us for this \$1,000.00 from Dr. [REDACTED]'s other funds? Do you want us to pay this from Consultants' funds? How would you like this handled?

[REDACTED]

As of telcon this date with [REDACTED] Dr. [REDACTED] ^{Gottlieb} instructed him to take the money for the above project out of "Cover Grants" or "Consultants".

B

[REDACTED]

C

Dear [REDACTED]

C

This is a brief progress report on the work I have done on the [REDACTED] at [REDACTED]

B

[REDACTED] under a grant from the [REDACTED]

At present, I have completed 35 interviews. By the end of the summer I should have completed about 50 cases from the 69 of the original [REDACTED]

C

Since September, I have been developing the interview schedule, (3 revisions) the [REDACTED] scales, the modification of the personality scales, the double blind translation of the personality scales, the locating of informants and the collection of data.

C

Still remaining to be done are the collection of the rest of the data, its analysis, interpretation, and finally the drafting of a report.

C, B

Since I plan to use this study as my doctoral dissertation in [REDACTED] I have asked some of the Professors who have been guiding me in my work to send you brief evaluations.

Even at this intermediate stage some important implications of this study are already apparent.

C

C

C

1. This is the first attempt to use an [REDACTED] scale which,
 - a. can be used [REDACTED]
 - b. on which different individuals can be objectively compared (something like the development of the IQ concept and test)
 - c. where both subjective and objective measures of [REDACTED] are used.

2. This is the only study where the most important known variable (on the basis of other studies) namely time, is held constant - all our respondents have been

C

3. Contrary to other studies, our findings seem to indicate that [redacted] habits do not seem to be most resistant to change - this has important implications both for learning theory and Freudian psychology.

C

Enclosed you will find a sample of the study kit used to collect information on each of the respondents with a brief outline of the study.

Since only the first half of the study has been completed, I would like to apply for another year of full time sponsorship from the [redacted] in order that I might complete the analysis of the data as outlined before. As I plan to use this study as my dissertation at [redacted] with special emphasis on [redacted] I thought it more appropriate if I applied for a grant directly to the [redacted] rather than through the [redacted]. [redacted] was kind enough to promise me his favorable recommendation.

B
B
C
B
B/C

I believe that it would be helpful if we could arrange an appointment to discuss the project at greater length.

Thank you for your consideration.

Sincerely yours,

C

C I should like to offer this letter in support of Mr. [REDACTED]
recent request concerning his ongoing research project dealing with the [REDACTED]
C [REDACTED] in the United States. During the
C [REDACTED] past year I have worked closely with Mr. [REDACTED] in the development of his study,
and have watched it progress from the idea stage to a fully operational project. He
has demonstrated from the start a high degree of competence and energy, so that I
have little doubt that his efforts will result in a significant contribution to our know-
C [REDACTED] ledge of this most interesting area of concern. As a scientist I share Mr. [REDACTED]
entirest for the problem, for it relates to our efforts to obtain a basic understanding
of behavioral change in the face of culture contact, and thus would hope that he be
C [REDACTED] given the financial support necessary to complete his work. Finally, I have every con-
fidence that Mr. [REDACTED] will, upon completion of his current project, continue to
contribute substantially to the growing body of theory and data in the science of human
behavior.

Sincerely yours,

C [REDACTED]

[REDACTED]
Assistant Treasurer

June 10, 1959

Mr. [REDACTED]

Dear [REDACTED]

In respect to the [REDACTED] material there seems to be no substitute for just plain knocking down to work. The roundabout method of collaboration between several groups who are variously committed to a number of projects at once has not jelled. At least, as of now, no plans for intelligent collaboration are in hand or on the horizon.

Since there is little impetus nowadays for implementing a collaborative design, may I say that a follow-up grant to complete the sociological analysis of the data collected in the initial [REDACTED] project sponsored by the [REDACTED] might contribute to the [REDACTED] goals.

What would emerge is a monograph of about three hundred pages describing and analyzing the regularities which characterize the sample group studied. In the main, we would stay pretty close to the materials and avoid undue speculation. A Table of Contents might include chapters on:

1. Historical setting and antecedents
2. Methodological considerations

3. [REDACTED]
4. [REDACTED]
5. [REDACTED]
6. [REDACTED]
7. [REDACTED]
8. [REDACTED]
9. [REDACTED]
10. [REDACTED]
11. [REDACTED]
12. [REDACTED]
13. [REDACTED]

A glance at this tentative list of chapters shows that we feel it necessary to link together historical and structural considerations with attitudinal and behavioral factors.

Hopefully, this monograph would be able to stand alone in published form. As such, it would be almost unique in the field of [REDACTED]. If and when a collaborative effort should come to fruition, the monograph would furnish an empirical base that would be most useful as a point of departure. When available, it might prove a stimulus to the other groups who have data on the [REDACTED] and revive some interest within once-interestered foundations. From the standpoint of on-going researches in the area of [REDACTED], such a background study would be invaluable.

We have not been barren in the last year and a substantial amount of rough draft manuscript is in hand. Specifically, important segments of chapters 1, 4, 5, 7, 8, 9, 10 and 11 have been written. Much rewriting and editing needs to be done with these segments, however; and, of course, there is much to do on roughing out the additional chapters.

C I am very sure that a completed manuscript could be in your hands 14 months from the time of the receipt of the follow-up grant. If commitments allow and the pen runs riot, why we may beat the due date. I say about a year, because both [redacted] and myself have commitments which can't be put aside and we will have to make time or steal it.

Our plan is that each of us will take primary responsibility for specific chapters while we share the responsibility for the entire manuscript.

While I have mentioned 1500 to 2000 dollars as a reasonable grant to see the monograph through, further consideration prompts me to ask for 3000 dollars to be used as follows:

1. a thousand dollars apiece for [redacted] for bulk, motivation, inspiration and bill paying.
2. a thousand dollars for expenses; particularly further data processing and typing.

C I am sure that if the [redacted] is able to make this grant, the monograph will be forthcoming and important to many different clientele.

Sincerely yours,
C [redacted]

C
[REDACTED]
Executive Secretary

B [REDACTED]

August 3, 1959

B [REDACTED]
C [REDACTED]

C Dear [REDACTED]

I have just received your check and wish you could know how pleased I am. This grant provides me with an encouragement that will make me indebted to your [REDACTED] in all my future studies.

I now have four articles in what I consider to be next-to-final draft for submission to editors. I am preparing a fifth paper for the [REDACTED]

B [REDACTED] meeting in [REDACTED] in December, titled [REDACTED].
C [REDACTED] The symposium project, it now appears, may begin in June or September, 1960. In each of these, as well as in any others I may get to in the coming year, I will be pleased to acknowledge the support of the [REDACTED] and to send along reprints.

B [REDACTED] The [REDACTED] submitted a proposal for the symposium in [REDACTED] to the [REDACTED] early in July. I have just gotten word from Dr. [REDACTED] that they would have supported the project with the proposed September starting date if their funds had not already been committed, but would like to consider it for a June starting date. He also suggested on the telephone that the [REDACTED]

B [REDACTED] and the [REDACTED] might be other possibilities if I didn't want to wait on the [REDACTED]. I told him I would prefer to stay with the [REDACTED] if their consideration would be an active one unless the [REDACTED] should be interested, under the circumstances, in renewing their previous consideration.

I am still confident that support for the symposium will appear. Postponement of the date relieves me considerably of the concern I had that my period at [REDACTED] would prevent my accomplishment of the full project I proposed to you [REDACTED] in my grant application. Your Grant will make it possible for me to forego extension classes and speeches in the coming year which would otherwise cut into my study time.

B
D

August 3, 1959

C We are having a rewarding summer here though the weather has hardly fulfilled our expectations. My seven year old, [REDACTED] is getting good geography and history lessons.

B
B We plan to leave [REDACTED] August 16 on our way home via [REDACTED]. I should be pleased to drop by your office for a few minutes on either the 17th or 18th if such a time will be convenient for you and [REDACTED]. We want to take the kids for a [REDACTED] and show them the [REDACTED].
C
B/C I will call your office on the 17th, but don't let my visit interfere with any plans or business you may have.

Sincerely,

[REDACTED]
C
[REDACTED]
[REDACTED] sitting Professor

June 26, 1959

C Dr. [REDACTED]
B [REDACTED]

C Dear Dr. [REDACTED]

Following our conversations and our correspondence I find that I am very reluctant to recommend a reduction in the amount of the grant. Therefore, I shall be transmitting the full amount of \$2,500.00 as originally agreed. I have yet to see a tight budget estimate work out where travel, personnel and incidental office expenses are involved. Consequently, I would prefer that you use any funds left over from your summer activity in the furtherance of your seminar plans and will acknowledge [REDACTED] the support accordingly when the symposium reports are issued. I shall be transmitting the funds after the 1st of July and will be looking forward to seeing you in this area.

Sincerely yours,

C [REDACTED]
Executive Secretary

24-40

June 16, 1959

Mr. [REDACTED]

Dear Mr. [REDACTED]

Your fine news via telephone came during final exam time at [REDACTED]. I finished up there on the fourth, now have that odorous moving job behind me, and am back at work here in [REDACTED]. I am greatly pleased by this support from your [REDACTED] and deeply grateful to you and to [REDACTED] for your effective and continuing work in securing support for my studies. You may be sure that I will do my utmost to justify this decision.

As I told you on the phone, I could not afford to let the [REDACTED] opportunity go by since your Board's decision could not be known at that time. As it has turned out, I am glad that both these opportunities came about. My schedule at [REDACTED] is ideal--I will have most of the mornings and three afternoons free each week for my research.

Since my application to you was based on subsistence for the entire three month summer period, and the visiting professorship at [REDACTED] extends from July 6 to August 15, I must tell you in writing what I told you via telephone: that I would expect the grant to be reduced in amount to compensate for the period spent at [REDACTED]. At least one-third of my time, probably more, will be free for study at [REDACTED], however, and I will have a full month after [REDACTED] since my duties do not begin at [REDACTED] until September 16. The [REDACTED] trip will be my vacation this year. I plan to fly, finally plan, in order to save time and probably expense.

I am handicapped in preparing a budget for such a grant as this, and I need your advice. I wish to be circumspect, and I am uncertain as to what extent the funds may properly be reallocated to such items as travel and stenographic help. My work might benefit significantly from stenographic and research assistant help, especially in August when the departmental secretary will take her vacation and in September when she will be busy getting ready for school opening. I am not sure how much stenographic help will be available in the department office at [REDACTED].

I am hesitant to suggest just how the budget should be revised but gather that is what you prefer, and so offer the following for your advice and alteration.

Salary--June 6 to July 5, August 16 to September 15, and one-third time from July 6 to August 15	\$1950 (?)
Books	100
Stenographer--half-time for two months	160 (?)
Research assistant--half-time for two months	200 (?)
B Travel expenses from [redacted], to [redacted] and [redacted] [redacted] for consultation with other investigators	90 (?) \$2500 (?)

The stenographer, assistant, and travel are not essential but facilitative, and you may feel the salary item should be further reduced; Please set the figures as you think best.

BC
B You will be glad to know that Dr. [redacted], has expressed his interest in the symposium, that I have prepared a proposal for the [redacted] in final draft, and am now preparing the final draft with the assistance of the [redacted]. [redacted] has given some encouragement to the thought that the symposium may be approved by September. [redacted] has consented to serve as consultant. As I am correct in believing that your [redacted] wishes me to devote some of my time during the summer grant period to preparation of the symposium?

C
B I am writing my thanks to [redacted] also, for the help I am sure he has given. Many good things have come my way in the last two years, including a very profitable and pleasant year at the [redacted] and now this grant. With the significant topic I have for my research interest and the support I am receiving, I feel most fortunate.

C Please express for me, if there is an appropriate occasion, my thanks to the members of your Board. I am looking forward with pleasure to accepting your invitation to visit your office this summer. I hope that you and [redacted] in turn, can visit our campus soon, particularly for the symposium.

C Sincerely,

[redacted]
Associate Professor

May 19, 1959

MEMORANDUM TO: The Director

C SUBJECT: Project Proposal, Category B - By Dr. [REDACTED]

C We have been in correspondence with Dr. [REDACTED] for about six months. His first proposal for a symposium on [REDACTED] was turned down on the advice of our consultants who recognized the skill and stature of the Investigator, but felt that the symposium was repetitive and could be made more worthwhile after a period of study. In the interim, between our refusal and subsequent correspondence, I interested the [REDACTED] in the idea of the symposium. It now appears that the [REDACTED] will sponsor his work when he returns to [REDACTED] next year. The [REDACTED] is in the position at the moment to facilitate the planning for this symposium and contribute specifically to the orientation that future research and reporting takes in this provocative area of study.

b, b, b

C The Principal Investigator [REDACTED] has indicated that his summer's experimentation and planning effort will require approximately \$2,500.00. Our consultants agree that a grant in this amount is justifiable and desirable at the present time. You will note that arrangements for early summer visiting professorship are pending with [REDACTED]. Consequently, I shall attempt to provide an early reply to prevent inconvenience either to Dr. [REDACTED] or to the [REDACTED].

May 10, 1959

Dr.

Dear

Your letter was wonderfully welcome news. I know no way to set a budget for summer study except on the basis of my regular salary, which for the present year has been \$800 per month and which for the coming year I must presume will be approximately the same. I should like to devote the entire three month period, from June 10 to September 10, to study and writing. Be assured, however, that any grant your Board is able to confer will be welcome.

No other expenses beyond subsistence will be required though I should like to spend about \$100 of any grant on publications to supplement my personal library. I believe the [redacted] will be able to provide adequate stenographic help for the preparation of manuscripts as well as an excellent private study room in the new air-conditioned library. Our acquisitions in [redacted] and [redacted] have been fairly complete.

I was pleased to hear from Dr. [redacted] and am writing to inform him that the [redacted] will submit a proposal for the symposium as soon as it can be prepared.

[redacted] has offered me a visiting professorship in their six-week summer session beginning [redacted]. I called Dr. [redacted] there yesterday to ask whether he could hold the position open for a while in the hope I might hear from you [redacted] before the time he will have to fill it. He kindly agreed. Under ordinary circumstances I would be quite pleased to teach at [redacted] but I regard the prospect of spending the entire summer studying, especially at this juncture, as an outstanding opportunity.

I greatly appreciate your continuing interest in support of my studies.

Yours sincerely,

[redacted]
visiting Associate Professor.

A Proposed Research Study In the Theory of Communication

Description of Proposed Research

Long-range project:

1. A critical review of the major contributions to an understanding of the basic nature of communication: information theory; cognitive, learning, and developmental studies of verbal behavior; verbal problem-solving; semantic theories; social-psychological theory (including small group and mass communication); cultural linguistic theory; communicative disorders and personality theory--each of these to be published as a separate study, spread over a period of years.
2. An attempt at a comprehensive theoretical formulation of communication, unifying the findings from the behavioral sciences. (Already begun--to be carried on concurrently with #1.) This formulation will include:
 - a. a description of major variables with suggestions as to how these may be operationally defined,
 - b. a schematic model for communication systems,
 - c. a classification of the major varieties of human communication situations, defined in terms of the major variables,
 - d. a series of interdependent postulates concerning the interrelationships of the variables from which various testable hypotheses may be deduced,
 - e. presentation of various research findings which support the theory,
 - f. the suggestion of a number of experimental studies required to validate and refine the theory.
3. A series of experimental studies, designed to test the theoretical formulations evolved in #2. (To be carried on concurrently with #1 and #2. First experiment: to test the effects of various kinds of controlled feedback upon alteration of communicator's verbal behavior.)

Immediate projects:

1. A critical review of information theory intended to assess its adequacy as a formulation for a general theory of human communication, drawing conclusions concerning its usefulness for various kinds of communication research, possible additions and modifications required to extend its usefulness, empirical verification from findings of laboratory and field studies, contradiction or verification from other communication theories, and experimental designs required to validate the theory.
2. Preparation for publication of research projects already completed and papers already in first draft:
 - a. An experimental study in the transfer of training in verbal problem-solving. (five semester long experiments completed, revealing significant differences; was reported briefly in a convention paper for the [redacted] C

b. A review of the experimental literature in problem-solving (reviews completed through 1950) have discussed its publication with the editor of the

c. A paper, (to be presented as a paper before the

d. A paper, (in first draft, to be submitted to the

Significance of the Proposed Research in Communication Theory

The purpose of the proposed series of critical reviews of major contributions to communication theory is to evolve eventually a more unified theoretical formulation of the fundamental structure and process of communication which can be validated by both laboratory and field studies. There appears to me a great need for a more comprehensive, more operational, and more precise theoretical system than any now available, one which will integrate the findings from many different fields of investigation and which may yield useful interdisciplinary applications.

Much significant theorizing has been done in various aspects of communication, language, and verbal behavior. Particularly valuable it seems to me are the theories of Herbert Wiener and Warren Weaver in information theory, Wendell Johnson and Alfred Korzybski in the semantic process, Maxfield Elliott, Kurt Lewin, and Robert Baltes in group interaction, Wilbur Schramm in mass communication, Benjamin Lee Whorf in linguistics, Charles Morris in theory of signs, Norz Goldstein in his nature of abstraction, Leo Postman in cognition, B. H. Johnson in problem-solving, Jean Piaget in language development, and the classical writers in rhetoric, particularly Aristotle.

All of these bear directly on communication, but none of them pretends to deal with it totally and comprehensively. Only Wendell Johnson, perhaps, sees as central the question of what happens when A talks to B, and he makes no effort to integrate the disparate findings and concepts hitherto related to this process. Information theory provides a comprehensive framework, but requires a different kind of elaboration and refinement than it has had for application in the social sciences.

The greatest need in communication research now is for more adequate conceptualization. Too many studies are multiplying in all kinds of applied research in communication which are of greatly limited usefulness as basic research because the experimental designs rest on statistical assumptions alone (and these often of doubtful applicability) - the conceptual framework of these studies is of narrow scope or limited applicability - the theoretical level is low. Theoretical work is needed to permit generalization of the results to other situations. Theoretical work is also needed in the diverse areas of communication study the investigator's apparent lack of awareness of investigations in cognate fields dealing with very similar phenomena under different terminology and conceptual frameworks.

On the other hand I am convinced that some of the theoretical work in cognition, learning, linguistics, personality, group process, information theory, and semantics provides much of the essential substance out of which the more comprehensive, operational, precise, and interdisciplinary formulations will come.

No one man, book, or person will complete the job of an adequate conceptual center for communication. It is the purpose of my proposed symposium to stimulate

the men who have already done the most significant theorizing in one aspect of communication or another to further theorizing of a more comprehensive, interdisciplinary nature.

I doubt that the majority of social scientists yet recognize the centrality of communication within the social process, which shapes human nature to what it becomes, but there is abundant evidence of a growing insight and interest in communication in nearly all the social sciences and humanities. It is a staggering job to keep up with the literature.

The study of human communication and how it functions in shaping men's minds and actions is at least equal in significance to our understanding the structure of the physical universe. Communication, to me, occupies the place of Tennyson's "flower in the crannied wall." Scientists of many fields now seem to perceive the significance of communication which has been expressed by poets from William Blake to Carl Sandburg, and are attacking the subject at many points. The outlook is exciting and promising.

Some Preliminary Theorizing about Communication

In order to pull this project one step down out of the clouds, here are a few selected instances of the direction my thinking has taken so far, particularly the interesting of apparently disparate theories.

When Shannon's concept of information (defined in terms of a given set of equal probabilities) is modified by Postman's hypothesis-information theory, also by the social psychologists' concepts of interaction and social norm and the cultural anthropologists' concept of cultural value systems, the prospect of a really scientific theory of communication is enhanced. A hypothesis suggests itself which is potentially testable: Information communicated is equal to the difference between the expectations (Postman's term: hypotheses) of the receiver and the content of the sender's message (Postman's term: information). When the message corresponds to the receiver's expectations, it is redundant (hypothesis is confirmed), and little information is communicated; when the message contradicts the expectations of the receiver (hypothesis is infirmed), or goes beyond such expectations, information is communicated and new expectations are formed.

The whole process is cyclical or spiral, as Johnson and Von Foerster emphasize, so that expectations are continually being reinforced or weakened or extended. The prediction of the results of communication depends upon knowledge of the receiver's expectations (I. A. Richards' text reference) in regard to the referent of the message and upon some means of measuring the qualitative and quantitative content of the message in advance. Berlin has done significant work upon the latter while the cultural anthropologists and social psychologists and experienced laymen observers are often able to predict individual reactions from knowledge of the social norms or cultural values of the reference groups to which the individual belongs. The various projective tests of the clinical psychologists and the various attitude and opinion tests of the social psychologists are also applicable to the prediction of reactions to communication.

Persuasion, or propaganda, is dangerous, i.e. unpredictable in its effects, when the hypotheses of the receiver are unknown or misjudged, for, as Hovland found, if the message does not recognize those hypotheses (awareness of certain facts or arguments), a boomerang effect is likely.

A common instance of empirical evidence for the theory exists in the fauller situation in which a sports fan learns the outcome of a particular sports event when he was fauller beforehand with the past performances of the participants and the odds quoted by the bookmakers. If the outcome is as he predicted, his hypotheses are confirmed, and he will perhaps raise the size of his bet or the odds he will give on the next game. If on the other hand, the outcome contradicts the individual's expectations, his subsequent attitude and behavior will be altered in the opposite direction.

In the latter case, indeed, the individual's faith in his ability to predict may be shaken, and if he continues to predict poorly about matters more closely related to his personal welfare than the outcome of a ball game, we may postulate serious personality problems of interest to the clinical psychologist and psychiatrist. Allxman has done some interesting experimenting on the difference between the mathematical probabilities inherent in the experimental situation presented to the subject and the probabilities as perceived and acted upon by the subject. One finding: when the probabilities are equal, the subject almost never acts as if they are.

Both Alfred Korzybski and Benjamin Lee Whorf were interested in the effect which patterns of language habits have upon the expectations and subsequent actions of individuals. Korzybski attempted to free the individual from much of the unconscious influence of language by techniques designed to heighten the individual's awareness of language effects and by attempting to teach his students to apply the attitudes and methods of the experimental scientist in their talking about common human affairs.

Whorf was interested in the metalinguistic problem of Walter Dillius--the differential effects of various languages upon the thought processes of members of the language community. John Carroll has had some success in verifying Whorf's relativity hypothesis. Carmichael-Rogan-Walter, Sherif, and others have also verified a differential effect between two or more word-labels applied to the same object upon the subsequent non-verbal behavior toward the object.

Another interesting instance of the importance of expectations in the communication process is that of "stage fright." This apparently universal phenomenon seems instead to be culturally determined to a significant degree, and the question arises, Would there be stage fright if there were no stages? Our culture gives high status to one who can fulfill our expectations from a position on the public platform, and our folklore is full of contempt for the windbags, bores, and demagogues who fail to fulfill our cultural image of this role. This ambivalence suggests the hypothesis that "stage fright" is proportional to the speaker's uncertainty concerning the listeners' expectations and to the extent to which his perception of the listeners' expectations and values (the role image) contradicts his own expectations and values (self image). Phillip Werchel and I propose to refine and test this hypothesis, using some interesting new testing devices of fear and hostility which he has developed. Psychic distance between sender and receiver for the relation between their relative social roles in whatever status hierarchy, is a communication variable of major proportions which seems to lie outside Shannon's theory.

To summarize so far: The equi- and finite probabilities of Shannon's mathematics must be conveyed, for social science, to a concept of probabilities defined by the listener's expectations (beliefs, values, attitudes, actual knowledge, hypotheses, references), which are potentially measurable. Shannon's other concepts--redundancy, entropy, feedback, coding, message, etc.--must also be modified and operationally defined at the psychological level, but I believe they exist with extremely useful results.

This usefulness has been demonstrated already by the elaboration and application of the concept of feedback. This concept goes a vital step beyond both the behaviorist's stimulus-response chain (including mediating variables) and the Gestalt organizing principle in perception and makes them more useful in the functional analysis of social behavior. Feedback is defined as core then response--it may be described as the sender's awareness of (or response to) the receiver's response to the sender's stimulus. Provision for this looping, cyclical, spiraling effect (foreshadowed by Aristotle) makes all the difference in an adequate theory of communication, and the difference as far as human behavior and the foundations of culture are concerned. This spiraling effect is made possible, apparently, by the complexity of the human nervous system, which makes possible multiple levels of abstraction or structure, which makes possible the symbol capacity, which makes possible language. T. C. Scholvin has made plain this qualitative difference between human and animal capacities, which Korzybski called the "time-binding" function.

Exploitation of the factor of feedback has accentuated for much of the significant new research in small groups by Latane, Festinger, et al--a good example of the usefulness of new conceptualization in stimulating a whole new body of research findings. On the other hand, much of the work in structural linguistics, though otherwise useful, seems headed up a blind alley as far as evolving any satisfactory theory of learning is concerned. Because of the rigid and narrow concept of scientific method used by many of its students, and because of failure to employ cross-disciplinary checking of their findings, concepts, and postulates with those of cognate fields, they are led to conceive of language as a separate entity, operating by a set of laws independent of human psychological functioning.

It is an accepted theory that the concept of self, as well as one's system of values, is built within the child through a process of enculturation, but the enculturation process is stated more precisely (when the terms are defined) as the feedback (or internalization of the responses) which the child receives from the functionally related members of his reference groups. The symbols employed in this kind of communication are the means of making such self-concepts and values negotiable, deriving their meaning for the child from the contextual situation in which the symbols occur.

Some psychiatrists and clinical psychologists have come to describe the counseling situation, the psychiatric interview, and psychoanalysis as processes in which perceptions of self and one's interpersonal as well as intrapersonal relations are slowly altered through skillfully controlled feedback. The feedback is used to open up blocked internal channels, receiving from the feedback process the sum of disapproval. The counselor has first to build through skillful feedback a perception of himself which eliminates the expectations in the event of disapproval, rejection, or punishment. Rogers and his students describe changes in the client's language, the differences in the way he talks about himself and his relationships, as indicative of his altered perceptions and behavior. A highly specialized type of communication, it might be said, is used to alter perceptions and "hypotheses" of the client to the end of more stable and productive behavior.

Empirical instances of the role of the feedback process in language development, in personality development, in the learning situation, and interpersonal relations could be multiplied by the score. The most striking instance is probably that of the child born deaf: the absence of auditory feedback, and compensated by alternative but less effective types of feedback, will prevent the child from acquiring language, reading, or even human behavior. Helen Keller's story is a wonderful exemplar to this process of human interaction out of which human personality and human culture are made.

One of the richest possibilities for cross-fertilization between studies in the development of theory of communication may be realized with the blending of learning theory and information theory. Such a juxtaposition might suggest the following hypothesis: interaction in communicative behavior occurs upon the feedback information differentially reinforces one or more aspects of that behavior, the direction and magnitude of the interaction being a function of the interaction between the communication behavior (such as intensity of deprivation) and the source, speed, consistency, clarity, and intensity of its feedback.

The learning theorists have been hordedly shy of verbal behavior, preferring to appropriate from animal studies, but B. F. Skinner has recently made a contribution of sorts at any rate. Exploitation of the feedback process, and its cyclical aspect, holds great promise in its implications for human verbal learning. Some

studies on the effect of immediate knowledge of the results of previous learning upon subsequent learning have been made, and are clear in their implications. The lack of comprehensive investigation, however, of the effect of communication variables upon the learning results in the standard courses of the curriculum is extremely noticeable. As our society comes to demand better educational products from our schools, teachers will not, nor be able to, resist the need for clearer evidence of results. It is difficult, for example, to assess the effects of closed circuit television on learning when we know so little of the effects of other types of communication media. An adequate communication theory could be able to answer the question: Under what kinds of communicative conditions (feedback, coding process, concurrent channels, etc.) do what kinds of learning most probably occur?

Other examples of the potential fruitfulness of cross-disciplinary checking of theories drawn from various aspects of communication study might be cited. Those, which are cited in this brief account require more detailed development, but perhaps I have said enough to give you an idea of some of the directions my thinking has taken.

Dr. [REDACTED]

C
B

Dear Dr. [REDACTED]

C

I have now received the comment and decision of my Board of Directors on your proposal of January 30. It is the feeling of the Board that our commitments to previously initiated tasks require us to postpone consideration of your proposal in this year of operation.

While the Directors exhibit the same interest in supporting your work that both [REDACTED] and I have, they feel that they can not commit additional funds at this time.

C

I shall keep in touch with you and at the proper time for reapplication, I will inform you. In the interim, I can assure that you would like to obtain support for your current period of activity. I shall be pleased to assist you in any way that you feel is possible. One note of advice--your proposal would perhaps be strengthened by including request for support of an ongoing research task as well as the [REDACTED] support.

C

Sincerely yours,

C

[REDACTED]
Executive Secretary

C

[REDACTED]

74-48

C Professor [REDACTED]

B [REDACTED]

C Dear [REDACTED]

C Thank you very much for your prompt, incisive and helpful action on the [REDACTED] proposal. It opens the way for consideration of several alternatives which we are now approaching.

Since you didn't mention the matter of compensation I am enclosing our check for one day's consultation and hope this will be satisfactory to you. If not, I shall rectify.

C
B

There is nothing I would like better than the conversation you suggest and I hope this can take place soon. We made a small grant to [REDACTED] in the late in '55 which permitted me to visit on the day of the football game with [REDACTED] and I suppose I missed you because of your attendance at the game. Next time, however, I shall notify you in advance and hope that we can thoroughly relish events of the past few years. I am looking forward to it.

Sincerely yours,

C [REDACTED]

Executive Secretary

C Mr. [REDACTED]

C Dear [REDACTED]

I am sorry to be negative about this, but it seems to me not a very exciting proposal.

B This young man doesn't really want a conference. He hasn't set down any of the crucial problems for discussion. He has merely outlined the field in a rather superficial way, and gone down the list of leading scholars. In other words, he really wants a book, which he can edit. By paying travel to [REDACTED] he hopes to get a number of well-known people to contribute chapters.

Ten years ago, this would have been all right. Then the field needed structuring, and these people needed to talk to each other. Now the needs are no longer for great umbrella-like conferences, covering everything, but for interdisciplinary attacks on specific problem areas. I doubt that this young man is capable of picking out those areas, choosing the right people to illuminate them, or persuading them to come -- at least without a considerable reward.

In other words, it doesn't seem to me to be worth supporting.

C If you would like to know what I think are some of the C problems in [REDACTED] that need a well-organized interdisciplinary attack -- like some aspects of the [REDACTED] B that you and I have been so long interested in -- I'd be glad to sit down with you some time and talk about them, and try to help you find the right men to run the operation and the right place to stage it. And if you don't get around to it earlier, I'll be at the [REDACTED] next academic year, and you ought to pay that place a visit.

With best wishes, I am

Sincerely yours,
C [REDACTED]

Dr. [REDACTED]

Dear Dr. [REDACTED]

I have held some preliminary discussions about your proposal and find receptivity for it. I am now prepared to submit it to the Board but would raise two considerations before doing so:

1. Are you convinced that your initial budget is adequate?
2. You have made little provision for non-verbal communication in your proposed symposium.

I shall continue to hold informal discussions with our Board and with advisors but shall wait to formally present it for Board action until I have heard from you.

Sincerely yours,

[REDACTED]
Executive Secretary

C

B

[Redacted]

C

Dear [Redacted]

C, B

You will probably remember our talk last July at the [Redacted] meeting in [Redacted]. I mentioned the project I was working on, a conference and symposium look of [Redacted]. You were kind enough to encourage me to seek support for the project from your [Redacted].

C

In September, [Redacted] and I, as it happened, both came to the [Redacted] as visiting staff members until June. I have had a number of talks with [Redacted] about this project, and I explained to tell you that he is as keen about it as I. We both think that this conference or symposium should be developed under the auspices of the [Redacted] while I carried the major responsibility for the project.

B, C

C

You know of [Redacted] work. I think, as [Redacted] at the whole symposia of the [Redacted] as international [Redacted] primary responsibility here [Redacted] as [Redacted] in contact [Redacted] research in [Redacted].

B, C

[Redacted] has been a significant part of the research work in the [Redacted]. In fact, I worked with him on a recent project in studying the effects of political [Redacted] or [Redacted] the results of which he will publish soon in a book with [Redacted]. He probably has, also, that [Redacted] has directed three conferences in [Redacted] the papers of which are published in their separate volumes.

C

[Redacted] is convinced as well as I that the study of human relations and [Redacted] in the range of any one discipline. A conference or symposium is in my opinion one of the best ways to bring to the study of human relations, and one which the [Redacted] will be pleased to carry out as part of its [Redacted] or [Redacted] activities. I enclosed a copy of our preliminary plan for such a conference.

C

At the [Redacted], we both thought it wise to write this letter as a preliminary feeling to get your reactions and further [Redacted].

C suggestions along these lines before putting the project through formal channels, either at your end or ours. Both [redacted] and I think it would be a very appropriate thing to have you at the conference and be a part of the proceedings.

B
B,C We feel assured that the full backing of the President's office or the [redacted] for this project will be forthcoming. President [redacted] was on the [redacted] campus last month for a conference, and at lunch with [redacted] and he the project was mentioned to him. He indicated that he thought it a fine idea. He has frequently emphasized the importance of [redacted] in his speeches, and he gave the [redacted] full support of its three previous conferences.

B,C We believe that holding such a conference, attracting national attention, in a center of learning in the [redacted] will have the advantage of transmuting sentiment if such a broad scope into this [redacted] of the country. We both feel a strong sense of loyalty to the [redacted] and its administration. We believe that significant progress has been made toward an outstanding university in recent years.

B If you think, however, that your [redacted] would prefer to hold the conference at another location, or to make some change in the nature of the conference, we would be glad for you to suggest alternatives. We have spent many sessions already exploring ways to make this conference a landmark, and would be pleased to have additional suggestions from you toward that end.

C The enclosed outline is still a preliminary plan of the conference and the back, suggesting possible topics and contributors. Please suggest changes or additions. We hope that the papers will provide the visiting scholars, and later the readers, with an understanding of the research going on in each field to the end that each will achieve a new perspective on his own research and will be stimulated to correct any inadequacies of his own due to lack of information in so many fields. We also hope each scholar will contribute his formulations to a general theory of [redacted] and that the whole conference will contribute something to a unification of knowledge about man. We expect to consult carefully with representatives in each particular field of study before making a final choice of contributors and extending invitations.

Since we are so anxious to get your reactions to our plans, and in order they be prepared liberally, it might facilitate things in the long run to present here a tentative budget with major estimated expense items. This budget is based upon twenty papers though there might be a few more or a few less in the final version.

- 1. Ground and maintenance expenses for the contributors at \$250 each \$5,000

2. Secretarial help in the pre-conference and post-conference periods, and preparation of the manuscript for publication	\$1,500
3. Conference project director for full-time work during summer, 1958, part-time during second semester, 1958-59, and both semesters 1959-60	
a. Conference arrangements and correspondence	
b. Editing manuscript for publication	3,000
4. Printing brochures announcing the program to interested persons over the country	1,000
5. Printing, stationery, incidentals	500
6. Two research assistants to assist in preparing and conducting the conference and in editorial work, \$1,000 each	2,000
TOTAL	\$12,000

Some supplementary notes on the budget:

1. This estimated budget is made on the basis of securing substantial contributions from all over the country without honoraria. We would like to pay an honorarium, but would prefer to get your reaction before doing it.

2. If, in your opinion, the [redacted] will be interested in having a more active sponsorship in the publication of the volume of papers through an additional subsidy for that purpose, we would be glad to add that item, with our acknowledgment to this effect, of course, on the title page of the volume as well as on the brochure.

We should like to hold the conference during the coming fall semester at a time when we are best able to secure the contributions. [redacted] and I should like to go to work on the project as soon as possible since we are so luckily together here at [redacted] until June when we both return to [redacted].

It has surely good fortune to have run across you in [redacted] and [redacted]. We will appreciate it greatly if you will give us your comments on the proposed outline, and your suggestions for presenting an official request to your [redacted].

[redacted] sends his best regards. Register us kindly to [redacted] so you remember the day it is ours at your house at the

C cc: [redacted]

January 30, 1959

I was very pleased to receive your reply to my proposal, expressing your interest. With a view to your reply in specific terms, I have prepared a revision of the proposal for your consideration which I have passed over the file and the Board of Directors. I shall continue to do so until the time the Board is ready to act.

I am writing with great interest for we are all responsive to the proposal. We will give your organization first priority in the publication of the [redacted] to be made available to begin our correspondence with a number of people who will have specific suggestions, criticisms, or additions, and the organization of the [redacted] and subsequently, correspondence with those we finally will invite to participate. I must also begin work immediately on plans for publication, provided, of course, that your [redacted] is unable to participate in this subsidy.

You might wish to know that I am expecting to receive an offer from [redacted] although I do not yet know the specifics of their proposal and therefore do not know whether I shall accept. I mention this because, should I accept an offer from [redacted] I should like to hold the Conference here. The administrative officials of [redacted] have expressed keen interest in the project and seem to desire to develop other interdisciplinary projects in communication. [redacted] is fully aware of these considerations and, I am sure, will be glad to return to [redacted] where we can work closely together in [redacted] research. I fully appreciate that I must do what seems best for my future progress. Should I come to [redacted] role in the Conference would not be quite so active, but I do hope to test if you'd still be a significant part.

I trust you find my revised revision of my proposal and I am glad to know that you will also be able to answer further questions. I shall be able to suggest contributors to talk in the present work shop next year. I am indeed looking forward to hearing from you again.

Sincerely yours,

C [redacted]

An Interdisciplinary Symposium in Verbal Communication

prospectus of a symposium to be held at the [redacted] during the school year of 1960-61 and subsequently published in book form.

Preface

None of man's capacities is so uniquely human as that of verbal communication; none appears more significant to man's condition and potential. It is appropriate that the study of language and communication should hold the great common interest among many disparate fields of learning which it has now gained. Perhaps no other topic cuts across so many disciplines. Adequate comprehension of communication will not be achieved without drawing on scholarly resources throughout the range of the arts and sciences. Knowledge concerning various phases of the subject has been accumulating rapidly in diverse sections of the scholarly frontier which are even yet mostly isolated from each other.

This proposed conference will be unique in its broad range of participation by leading scholars from all sections of the frontier in communication research. The conference is designed to provide above all, for the sharing and inter-stimulation of theories and concepts which can both reveal the gaps and discrepancies and integrate the disparate findings. The "cracks between the sciences" may be thus exposed toward the end of unifying a science of communication.

Plan

Scholars who are regarded by their colleagues as outstanding contributors to knowledge of human verbal communication will be invited to submit papers. Each will be encouraged to develop his topic in his own way but to relate the findings of his study with those in cognate disciplines and with theoretical formulations of his own. A preliminary list of topics and contributors is attached.

Copies of the symposium papers will be distributed to conference participants in advance. Two representatives from not more than each of fifty universities will be invited to participate as auditors, questioners, and discussants.

The symposium will divide into five sections, presented over a period of five consecutive days, and will be limited to twenty-five or fewer papers. This limit is prescribed in order to insure the highest quality of participation and to encompass the published symposium within a single volume.

Questions and discussion will follow each paper and each section. These will be transcribed and edited for publication.

C De [REDACTED]

It was very good of you to take action so soon after returning to your office. I do hope that this did not involve too much inconvenience on your part, although I rather suspect it may have. Needless to say, I was delighted to know that final approval had been ~~obtained~~ *obtained* and that the funds had already been transmitted by the time I got your letter.

I have been able to continue the research without interruption this summer, and I am making good progress. I will from time to time inform you of these specific details as regards the research, and I will, of course, file a complete report with you at the time of the completion of the research, the publication of the book [REDACTED] and I am writing, or the termination of the grant from your organization.

L [REDACTED] tells me that you do quite a bit of traveling around the country in connection with your work. I do hope that I will have the opportunity to see you, not only to make your acquaintance, but also to discuss with you many aspects of our work which cannot adequately be discussed in a proposal such as I have filed with you. My sincere thanks to you and your organization for your kind consideration and support.

Yours very truly,

C
The [REDACTED] Directors have approved a grant to the [REDACTED] in the amount of \$9,141.00 for a research program on [REDACTED] proposed by [REDACTED]. Enclosed is our check in the amount of \$1,555.25 which represents the first quarterly payment of the grant.

The following conditions apply in the utilization of these funds:

1. A technical report is to be submitted after the completion of the phase of research covered by this grant.
2. A terminal accounting of funds expended in obtaining, processing and reporting data shall be provided for our records.
- B 3. After the completion of your research, any funds remaining shall be returned to the [REDACTED].
- B 4. Equipment purchased with these funds shall be conveyed to the [REDACTED] in lieu of any increased overhead rates.
- B 5. If, at any point, further research in this area is deemed not expedient or scientifically profitable, the [REDACTED] shall be notified in order to negotiate for termination of the grant.
6. Any technical reports or papers which grow out of the study supported under this grant shall contain the following notice: "This study was supported in part by a grant from the [REDACTED]"

B [REDACTED]
Other than the above conditions, it is required that the funds be expended entirely for the research designated and that no profits accrue to any individual.

c

February 20, 1960

C
Dear [redacted]

I am replying to your letter of February 1st with apologies for being so tardy. I appreciate your enclosing the payment with your letter since my finances were becoming a bit tight.

f The [redacted] economy still baffles me in that some items which one might expect to be costly -- such as public utility services and auto repairs -- are relatively inexpensive. On the other hand, an edible piece of beef raised here [redacted] is high, and an ordinary sport-shirt (manufactured at sweat-shop wages) costs about what it would in the U.S. I am most amazed, however, at the costliness of routine clerical service. To get a two-page questionnaire stencil typed and 100 copies mimeographed cost me nine dollars. All in all, budgeting becomes something of a challenge with credits and debits assuming unpredictable and curious proportions.

f You inquired about the nature of the documentary and statistical materials which I should like to use as supplementary sources. For one thing, I should like to sample the marriage and divorce records at 5-year intervals for the last 15 years, not only to discover the general trends but also to note such significant factors as age, occupation, place of residence, etc., of the individuals involved. These files are at the [redacted] in [redacted] the [redacted] I had hoped to get something of use from the birth records also, but the illegitimacy rate is so high (about [redacted]) that I have discarded the idea of examining these.

f The [redacted] can provide records on the educational training of teachers and also school enrollments, which could be sampled in the same way as marriage and divorce statistics. Job classifications and income trends are recorded at the [redacted] and the number, type, and location of new businesses can be discovered at the [redacted]

f I should also like to get some indications of the prevalence (and incidence, if possible) of physical and mental illnesses in a sample of industrialized and non-industrialized communities as well as the trends in the causes of death for various age groups. Increases in and the distribution of doctors, nurses, and hospital and clinic facilities would also be well worth recording. I can secure medical materials of this kind in more or less adequate form at the [redacted] and the [redacted]

f In [redacted] has promised me access to their case-history files in which about 150 cases are now being kept. This is a really

unusual opportunity, for welfare agencies are generally reluctant to open their files in this way. I believe the cases will reveal something of the consequences of rapid social change for family roles and the individual personality.

How long it will take to record these materials is difficult to estimate precisely. I can secure the services of one or two people who have had experience with the [redacted] and who should therefore prove more efficient than an ordinary clerk. The work can also be hastened by my providing them with schedule forms on which to record the information. My best guess is that the work would cost somewhere between two and three hundred dollars. If a supplement could be provided for the higher figure, I would naturally expect to return any unused funds to the [redacted]

F.C

B

Many thanks for your friendly and encouraging letter. I shall write again later to let you know how things are coming along.

Sincerely yours,

C [redacted signature]

74-92

February 1, 1960

C [REDACTED]
[REDACTED]
C Dear [REDACTED]
C

Enclosed is a copy of a short interim report from [REDACTED]. We made a grant to him for \$6,000 on September 1, 1959. He got so excited about the prospect that he left [REDACTED] immediately. This is the first word we have heard from him since he has been in the field.

On page 3 he discusses the availability of core materials and vital statistics, but points out that he is unable to exploit this himself in the short time he will be there. Do you feel that we should extend his grant by a few dollars which is needed to employ an assistant, or should I just offer to punch his card for him? Thanks for the advice.

Sincerely yours,

C [REDACTED]
Enclosure

February 1, 1960

C
[REDACTED]
C Dear [REDACTED]

Thank you for your very informative letter of January 25. It sounds to me as though you are obtaining some marvelous field experience. I hope its cost in energy and enthusiasm is not prohibitive.

I am not disturbed by the changes you have had to make in your design. In behavioral science I have observed that field work usually requires this kind of modification. But field work similar to that of the Naturalist accomplished on human behavior frequently makes as great a contribution to theory as experimental manipulation.

It seems a shame that the documentation available in the health and vital statistics can not be obtained during your data collection period. It is possible that contained within this material is validation of some of the indices you may actually be studying. Do you have any idea how much the services of an assistant would be for the period of time necessary to collect the data? Can you provide more substantive information about the files and their relevance? Attached is our check for \$3,000 representing final payment on your grant.

Best regards,

Sincerely yours,

C [REDACTED]
Executive Secretary

trial

Jan. 25, 1930

Dear Mr [redacted]

I want, first of all, to thank you for your Christmas card. It was especially welcome since I was finding it difficult to believe that the Christmas season had really arrived, what with the temperature in the high 80's every day and the traditional [redacted] during the holidays.

I have been meaning to write you for several weeks to let you know how my project is going. So far it has been a mixture of successes and failures. Things are moving along quite well at present, but the first two months were frustrating in the extreme. I soon discovered that living costs here are far higher than I had anticipated--although I knew beforehand that some items would be expensive. Originally I had planned, as you know, to take up residence for several months in a succession of villegas. Rental of a permanent home-base within reach of the University and [redacted] proved so high, however, that to also secure room and board in the field became prohibitive. The second problem I encountered was transportation. Public facilities in the "metropolitan" area are adequate, but the rural areas are mostly unserved except by trucks and donkeys, both exceedingly slow and unreliable. Hence, I bought a small, over-priced second-hand car. This I did with an apprehension which was well justified, for it has developed a quite remarkable series of major and minor illnesses. Yet in all justice to the machine, it has so far always gotten me home, even from exceedingly remote villegas in the mountains. (Unexpectedly, even mimeographing has become a major item of expense. To have a two-page stencil cut and 100 copies of each page run off costs eight dollars and fifty cents)

My inability to reside in the field made the arranging of interviews difficult. Much too much time was being consumed in simply locating interviewees. Hence, I decided that the only way to speed up my data collecting would be to switch to group interviews and questionnaires. (The latter I have had to simplify because of the near-illiteracy of many rural people.) Fortunately, there are many organized groups which I can utilize even in the small villegas. These groups have been formed among the men chiefly by the [redacted] and among the women by the [redacted]. Younger people are similarly organized by the [redacted]

As you work through these groups to get at the people's

attitudes toward various changes, and at their reasons for accepting or rejecting these changes. Using groups means that I can include more people than I had originally thought possible. It also means, of course, a sacrifice of much of the depth which can be secured through individual interviews. The pressure of time has left me little choice, however. Too, I have been able to add a dimension not included in the original proposal: I am collecting data on the agencies largely responsible for changes in the villages, namely, the [redacted] and similar organizations. Regarding these, I am trying to get at the image which the field-agents have of their organizations' projects; also their assessment of the factors involved in such planned changes and of the people toward whom the projects are directed. What will, I hope, result will be a picture of the interaction between certain agencies of change and the human targets of change, not merely a description of the changes themselves.

My initial work on the project has been in a quite isolated region here near the [redacted] [redacted] which has been exposed to an agency known as the [redacted]. [redacted] [redacted] [redacted] somewhat after the T.V.A., its program La includes soil rehabilitation and conservation, reform of farming practices, and community and home development. The Authority's chairman and the various field agents-as well as the people of the valley-- have been extremely co-operative, and I feel that I have collected some interesting material despite a slow start. Furthermore, the changes occurring here are even more relevant to the field of [redacted] than those I had planned to deal with in my original prospectus. I might add that the [redacted] is a [redacted] growing and [redacted]-growing area, many of the villages lying more than 5000 feet above sea level. Vegetables and flowers are also grown, but physical erosion and human conservatism have made the work of the Authority difficult. The villages lack either electricity or telephone, and the roads are scarcely more than improvised donkey trails. Driving these roads is a rather adventurous business. They climb steeply, turn at blind right angles around sheer cliffs, and rarely sport the luxury of guard-rails. I have frequently had to postpone trips into the area, because any heavy rain brings on landslides of sufficient size to block the road. Clearing the way is usually done by hand-labor though occasionally bulldozers are used. Lead this sound overly dramatic, let me say I have not been running any actual risks. But the driving is a good bit more exciting than anything I have encountered in the U.S.

While continuing the work in the [redacted] I will shortly be getting a similar survey under way through the same three agencies in another region for comparative purposes. Following that I plan to collect materials in quite different fields in both rural and non-rural communities. These will be concerned with specific programs in public health, birth control, and education. Although the objectives are unlike those of the [redacted] or [redacted] the agencies involved are nevertheless promoting many innovations. Again, apart from discovering just how much change is occurring, I hope to find out

whether the patterns of interaction between agency personnel and the people are similar and whether comparable obstacles to change exist.

In short, the approach of my project had shifted from community studies to case studies. While my results may have more limited theoretical implications than might have been the case in the project I originally proposed, I think there is real value in expanding its substantive scope. The changes which are taking place go far beyond the family, the area to which my first prospectus was limited. Transformations are going on rapidly and are much less related to the [redacted] industry than I had thought earlier.

One thing annoys me. There is a wealth of documentary and statistical material which I shall not even be able to tap for lack of time. There are, for example surprisingly complete records kept by various agencies concerned with health, case materials accumulated by family guidance agencies, vital statistics, etc. I very much regret that I did not originally plan for adequate assistance which would have enabled me to record such valuable source materials. Would it be appropriate for me to request a small supplement for additional assistance in this work?

I hope I have given you some notion of what I am doing and the drasticness the project is taking. I hope also that neither you nor the [redacted] will find the alterations disappointing. They have been made only because of the pressure of circumstances. It is my own feeling that the alterations constitute both gains and losses, with the gains being the greater.

It would be absurd for me to try to express adequately my gratitude to the [redacted] for making this work possible. Apart from the material which is being collected, and I hope a fair amount of it will be publishable, the experience simply of being in an under-developed region and doing the field work is tremendous.

There is no question but that my research and teaching in the future will be markedly affected by the work I am doing here.

My profound thanks to the [redacted] and to you personally. I shall be writing again later.

Sincerely yours,

[Redacted signature]

P.S. Kindly forgive the appearance of this letter. The typewriter which I borrow has peculiarities which vary from moment to moment.

MEMORANDUM FOR: The Director

SUBJECT: Project Proposal - Category C - Dr. [REDACTED]

C
C, B
C

Attached is an unclassified proposal from Dr. [REDACTED] of the [REDACTED] Dr. [REDACTED] commented on my report as follows:

"Project B. Method and techniques of how to study social change are likely to be of tremendous importance if we are to study other rapidly changing countries intelligently, e.g., India, and, 'Beer test,' 'Middle East' etc.

This man's approach seems far more sophisticated than most and the notion of comparing several communities to role structures is good.

I think this fits in well with ongoing work and could provide a great contribution to the theory of social change. Also it's always nice I like role-analysis.

"I don't know the man, but he presents his case very well."

I have no additional recommendations in advising you to a decision regarding this grant. The applicant has demonstrated perseverance and imagination in his previous work which this proposal would extend. I feel that we should go on with a two-year or 12-month test, at of this though if you so desire, at the end of which we could evaluate to determine whether additional support will be justified.

C

[REDACTED]

B

B

Gentlemen:

F I am enclosing my proposal for a study of some of the consequences of economic change in [REDACTED] by precise covers, I hope adequately, the points of information included in your "Instructions for Submission of a Proposal." It includes also a few other items which I thought might be of interest.

C A letter I received from [REDACTED] earlier indicated that it was rather unlikely that applications for 1959 would be considered at this time since funds are already largely committed. She did not state, however, that such applications would be completely ruled out of consideration. For this reason, and because I failed to inquire what budget limitations exist, I have described three alternative time-tables and two alternative budgets.

If my proposal appears obscure or incomplete in any respect, I should greatly appreciate the opportunity to clarify or elaborate such points as you may single out.

Sincerely yours,

C

C

E F C [REDACTED]

SOCIAL CHANGE III [REDACTED]

Objectives

f The project proposed here has two, related objectives. One is to secure a description of recent changes in certain aspects of the economic and the family systems of [REDACTED]. The second objective is to discover how changes in roles within the family come about and the extent to which they are associated with alterations in the economic life of the people. In other words: What is the relationship between changes in economic roles, on the one hand, and on the other hand, changes in people's expectations concerning family roles and their behavioral conformity or non-conformity with those expectations?

The emphasis on role as an analytical concept in the present proposal is derived from its being a major element in the social systems of human society. Modification of these systems is the process usually conceived as social change.

f My immediate plans for materials gathered are to use them as the basis for a monograph on the relation between economic change and family structure as well as for articles in professional journals. I hope thereafter to undertake a text on social change which would incorporate not only the descriptive data on [REDACTED] but which would, more importantly perhaps, utilize my theoretical results concerning role as a frame of reference.

f Beyond these immediate projects, I intend to continue my teaching and research in the field of change with the hope of stimulating others to make it a major area of study. The ultimate objective, of course, is increased understanding and prediction of the social consequences which may be expected when man's relationship with his environment is altered. I should like to think, more specifically, that within another six or seven years a return to [REDACTED] might be possible in order to follow the kinds of developments encompassed by the present study.

Method

f [REDACTED] exhibits characteristics making it ideal for an analysis of social change. Recent and rapid economic innovations have occurred in a few communities with the advent of [REDACTED]. In several other communities, [REDACTED] has involved economic transformations over a longer period of time. To discover the implications of these economic forces, I propose to compare a [REDACTED] and a mining community with each other and both of these with a third community still anchored f in the traditional agrarian way of life that predominates [REDACTED].

Interviews and questionnaires will be directed at a sample of approximately 50 of the residents of a representative agricultural community to discover how they define the rights and duties of such family statuses* as father, son, wife, etc. (The samples will include the youth and elders as well as the parental generation within the family.) A small number of interviews will extend beyond scheduled questions in order to achieve greater depth and to aid in interpreting the quantitative data.

*A given status may, of course, comprise several roles. The status "father", for example, may include such component roles as disciplinarian, teacher, companion, etc., with relation to the status-occupant's children.

C [REDACTED]

In similar fashion, data on role-expectations will be secured from 50 residents in each of two communities which have been transformed into [REDACTED] and [REDACTED] centers to permit comparisons among three communities unlike in their economic structure.

Several weeks after the initial interview concerning role-expectations, respondent will be interviewed again to ascertain his role-behavior with respect to his family statuses.* Thus, comparisons can be made to reveal which statuses and roles are most marked by behavioral deviations and whether the deviations are more prevalent in the economically changing communities.

Schedules will be employed during the interviews in order that results will be sufficiently uniform and accurate to lend themselves to statistical analysis. Questions will permit a range of answers from extremely positive to extremely negative so that degrees of commitment and conformity to role-expectations can be ascertained. It should be possible to supplement the interviews with questionnaires administered to larger samples of residents during meetings of community organizations and - in the case of younger respondents - during school hours.

Hypotheses

1. Some deviations in behavior from role-expectations** will occur in an economically stable community as well as in economically changing communities.
2. Behavioral deviations will be more prevalent in an economically changing community than in an economically stable one with respect to those role-expectations which are characteristic of both kinds of communities.
3. A significant difference will exist between role-expectations in an economically stable community and expectations concerning the same roles in communities which have undergone either early or recent economic transformations.
4. Compared with an economically stable community, there will be more difference in the role-expectations in a community which has been undergoing economic change for a long period than in one where economic change has been relatively recent.
5. Maximum consensus concerning role-expectations will be found within an economically stable community, less consensus within a community characterized by recent economic changes, and minimum consensus within a community where economic change has been of relatively long duration.
6. Within a given status there is at least one role which is especially significant to the structure of that status and which might therefore be called a "pivotal" role. Its significance may be partially expressed in the hypothesis that alteration of a pivotal role will more frequently involve changes in other roles encompassed by the same status than when the initial alteration occurs in a role which is not pivotal.

C *I am indebted to [REDACTED] my colleague, for suggesting this technique which he used successfully during his field work in the [REDACTED]

C **In all the hypotheses, reference to roles and statuses pertain to those within the family.

7. Alteration of a pivotal role in one status will more frequently involve changes in roles encompassed by related status than when the initial alteration occurs in a role which is not pivotal.

Significance of the Project

C One circumstance contributing to the significance of the study proposed here is the fact that very little is known about recent changes in [redacted] an area of increasing economic and political importance in the [redacted]. From a theoretical point of view, the project's significance lies in its departure from traditional studies of social change. Whereas much work in this field has involved descriptions - often impressionistic - of broad trends in societies as a whole, the intention here is to employ a more restricted and more rigorous approach to the subject.

It might be added that the concept of role, though holding great promise for the study of social change, has previously been little used for this purpose. That hitherto unexplored facets of the problem can be opened up is indicated by the hypotheses posed above. Additional facets which are not covered by these hypotheses and which cannot now be anticipated will inevitably be suggested as the work proceeds. Fresh leads for analysis will, it is hoped, be discovered and new theoretical questions raised. For example, should hypotheses #6 and #7 be verified, pivotal role would prove to be a highly useful and perhaps a key concept for further studies in social change.

F In short, role should prove to be an exceedingly useful concept in pin-pointing what happens to the individual and the groups to which he belongs when one aspect-- in this case, the economic--of his life is altered. While not stated in my hypotheses, I suspect that in the case of [redacted] society, the pivotal role of both mother and father is the role of breadwinners. Typically, the male or feasible head of the family has lived close to the soil and has acted as superintendent and leader of the family's joint agricultural efforts. When this family head becomes dependent upon wages, is himself subordinated to the directions of others, and becomes occupationally isolated from spouse and children, many elements are necessarily altered: his conception of himself, their conceptions of him, and the various role relationships which identify them all with the family unit.

Time Required for the Project

F Field work is exceedingly time-consuming, especially during its initial stages and [redacted] is present. I do not see how the materials for this project can be gathered in less than twelve months. To permit some preliminary analysis in order that gaps in the data may be discovered and filled by brief returns to the field, an eighteen-month period would be preferable. One factor is, of course, the quality and amount of assistance (referred to below) which can be secured from the [redacted].

C, B, f } *Various studies have, of course, been done in the area, many of them reported in the quarterly [redacted]. Three books on the area are [redacted]

f [redacted] These works have been concerned chiefly with existing social patterns and problems rather than with social change.

Funds Required

The funds needed for the project will depend upon the amount of time spent in the field. Sabbatical leave arrangements are sufficiently flexible to permit one of two plans: I may leave in August, 1959, and be away for the year at half salary or I may leave in February, 1960, and be away for six months at full salary. Originally, I had hoped to follow the former plan, but if financial assistance cannot be assured until 1960, I could not leave until February. In this case, I would hope to be able to extend my stay through the academic year 1960-1961 on a leave of absence without salary. A third alternative would be, if necessary, to limit my leave of absence without salary to the fall semester only, leaving in February, 1960, and returning in January, 1961. Budget-wise, the first and third alternatives would require the same amount of financial aid; the second alternative would cost about 75% more, but would increase enormously the scope of the study. In round figures, the twelve-month plans would require a grant of \$6,000, the eighteen-month plan, a grant of \$11,000.

Twelve-month Budget

Transportation	\$ 500.00
----------------	-----------

This figure includes my personal round-trip fare to [redacted] and an estimate of the cost [redacted] of moving about [redacted].

Subsistence: funds in lieu of salary.	\$4,500.00
---------------------------------------	------------

My salary next year will be \$9000 if the newly proposed scale is established, \$8,400 if it is not. Whether funds in lieu of salary are distributed over twelve months or concentrated in the fall semester, the figure would be identical.

Tape recorder	\$ 300.00
---------------	-----------

This is to be used to record unstructured interviews, i.e., those which are not restricted by "yes" and "no" answers and which permit the respondent to talk freely with a minimum of direction. It also permits the interviewing of several persons simultaneously and documents the interaction between the respondents.

Assistants	\$ 700.00
------------	-----------

This is primarily for the kind of assistance in the field described below under "Assistance and Facilities", but it is also for assistance in coding materials to be transferred to IBM cards.

Total	\$6,000.00
-------	------------

Eighteen-month Budget

Transportation	\$ 650.00
----------------	-----------

This includes the same figure [redacted] for fare to and from [redacted] and [redacted] for local transportation.

Subsistence: funds in lieu of salary.	\$9,000.00
---------------------------------------	------------

Tape recorder	\$ 300.00
---------------	-----------

Assistants	\$1,000.00
------------	------------

Total	\$10,950.00
-------	-------------

Facilities and Assistance

I have the assurance of [redacted] and [redacted] that office space, library facilities, etc., will be made available to me and that the [redacted] will co-operate in every way possible. [redacted] anthropologist and recently [redacted] has also written me that "we would welcome this association and support your project." (Unfortunately [redacted] reference to "support" does not include financial help since the [redacted] funds are restricted to its own staff.)

I shall, of course, seek the advice of the [redacted] anthropologists and sociologists in selecting representative communities of the three types described earlier. It is also my hope to secure student assistance from the [redacted] to accelerate establishing rapport with community residents, to aid in my acquiring early facility with the rather difficult [redacted] and to illuminate aspects of the economic and family life which might be discovered too late for maximum utility.

Professional Record and Previous WorkPublication:

Since the work is to be done in [redacted] collection of primary data cannot be started until I arrive in the field. Meanwhile, I have been acquainting myself with the area through the customary perusal of and note-taking on available materials. In addition to the volumes cited on page 3, issues of [redacted] (published by the [redacted]) pertinent to my project have been consulted and I have three unpublished doctoral dissertations based on field work in [redacted].

Progress of an indirect kind has been made in the direction of pre-testing certain questions for the interview schedule. This has been done in connection with my investigation locally of changing roles of older family members, a project supported by a [redacted]. The data in hand have been scored through four hundred questionnaires which have been coded and the results of which are now being processed on IBM cards. A major objective of this project

is to throw light on general aspects of role and role change in anticipation of the broader study to be done in [redacted]. I should perhaps add that my participation as a [redacted] in 1958 was largely motivated by my conviction that [redacted] in one or several fields which can provide valuable concrete data for the analysis of social change.

Actually, my professional interest in social change dates back about six years, and for three years I have been teaching both a graduate and an undergraduate course in the subject. Knowing of my interest in the field, [redacted] of [redacted] four years ago suggested that I undertake a volume on [redacted]. The study which resulted, [redacted] is therefore concerned with social change insofar as that area could be incorporated without obscuring the book's major objective. Since completing that work, I have come to feel that, for the purposes of illuminating the problem of social change, [redacted] provide a less promising body of data than does a smaller social system such as the family.

Other Sources of Assistance

I have written to the [redacted] its director has expressed an interest in my proposal, but the deadline for applications for 1959-1960 had passed before I applied. There is no doubt that some assistance will be forthcoming from our [redacted] Since its funds are extremely limited, however, and must serve a faculty of over [redacted] grants are always very modest. As a result, I cannot hope for more than \$500 from this source.

A Memorandum to: [REDACTED]

C Subject: [REDACTED] Project

C, B, F Enclosed is a summary report of the [REDACTED]. Further products will be forthcoming, but possibly you would like this description to become a part of your file on the task.

You will note that, as informally agreed, approval has been given for the use of unexpended funds for continuation of the work. A final accounting will be rendered on completion.

C [REDACTED]

C [REDACTED]
Enclosure

B

C

Dr. [REDACTED]

B, F

C

Dear [REDACTED]

Thank you very much for your letter of March 29 and your report summary. It seems to me that you have been most productive and, of course, we are gratified to have been a part of your work.

A discussion of your expenditures with my Finance Committee has resulted in approval for the use of the left over funds in continuation of your work. We will require a formal accounting of the funds used and acknowledgment of the [REDACTED] support for any additional work completed.

B

Again, we are pleased with the progress and hope you will keep us informed as the work goes along.

Sincerely yours,

C

C

B.F.

B.F.

f

March 29th, 1961.

C
B

C

Dear [redacted]

Enclosed is a copy of my report covering the two years March, 1959 - March, 1961, for which the [redacted] grant was given. I am sending you several more copies under separate cover.

In view of the multiple sources of financial support for our work, I have included in the report all of the studies related to the adjustment and assimilation of immigrants carried out by our Department of Psychology. The sources of finance are indicated separately for each project.

The University Accountant has not yet been able to complete the figures on the expenditure of year [redacted] grant. My estimate of the current balance is \$2500, but this could be \$500 away from the true figure. The reason for this residua is partly that the [redacted] unexpectedly provided certain required services (especially research grants and typing and computing services) and partly to the relative unavailability in this isolated community of the psychologists who were required to do the research work and to replace my teaching services.

Perusal of the descriptions of the studies in the report will show that several of them are still in process of analysis and preparation for publication. There is enough material to occupy my time during the next year, and perhaps for the next two, in writing them up for publication. I therefore request your Board of Directors to allow me to retain the balance of the funds to meet further costs of (a) teaching replacement for me, if this should be feasible, (b) computational and typing costs and (c) other publication costs.

F.B.

A complete accounting for funds to date will be provided by the Accountant of the [redacted] as soon as it can be compiled.

Sincerely,

Cif

[redacted signature block]

(Written by [redacted] project co-ordinator of investigations
subalized by [redacted])

INTRODUCTION.

Studies on the adjustment of immigrants have formed a notable part in the sociological literature of the first half of the 20th Century. Readily there comes to mind such studies as The Polish Peasant by Thomas and Znaniecki, The Ghetto by Louis Wirth, Immigration and Assimilation by H.O. Duncan or Americans in the Making by W. C. Smith.

The sources of the material used in these studies have been historical documents, personal documents and testimony, demographic records and ecological material (crime and suicide rates, for example).

These data have traditionally been treated as group phenomena sometimes illustrated by life history reports, and the investigations have seldom used any of the more exact techniques that have been developed in recent years by the behavioural sciences. The published reports sometimes come close to being journalistic descriptions rather than scientific statements; doubt often exists regarding the representativeness of the samples used, the objectivity of the data gathered and the soundness of the interpretations that are made. A review of the literature would suggest that little attempt has been made to consider the degree to which generalizations can be made either between different ethnic groups or between immigrants into different countries.

In 1952 a series of studies into the adjustment and assimilation of immigrants in [redacted] was inaugurated at the [redacted] with an investigation by [redacted] into changes in the attitudes of [redacted] immigrants in their first year after arrival. In this and in subsequent studies of [redacted] immigrants, a social psychological approach was adopted, and the data were collected by both questionnaire and interview schedule. Correlation coefficients, factor analysis, cumulative scaling and other statistical techniques have been used to study the relationships between the various measures of adjustment and assimilation and other background variables such as sex, age, economic circumstances, home background, marital status, length and place of residence in [redacted]. A unique feature of some of the studies has been the use of an [redacted] control group in order to assess the meaning of some of the measures obtained.

In order to enable comparative studies to be carried out on social assimilation, attempts have been made to develop a standard conceptual scheme which is applicable fully or in part to all relevant situations. Thus [redacted] (1957) presented a tentative model for this purpose analyzing factors such as the immigrants' attitude towards the new country, the accommodation of his

behaviour, his acquisition of the new culture, his identifications and reference groups, the adaptation of his social norms and values and the attitudes towards the assimilation of immigrants held by immigrants and by

f

f, B

c

f, c

c

This multi-aspect model has contributed to some of the concepts used in most of the investigations at the [redacted] and especially to those by [redacted] on the assimilation of trucees into the [redacted] and [redacted] on the assimilation of [redacted] immigrants. A completely revised version is being used in the planning of the current study of the assimilation of immigrants' children by [redacted] (see below)

The studies by [redacted] have concentrated on three aspects of the adjustment and assimilation process: satisfaction, identification and acculturation. He has devised standard methods of measuring these which have been used in similar form in several of the studies.

It is hoped that these attempts to develop a generalizable conceptual scheme and standard research tools will enable further comparative studies to be carried out, and will ultimately further the desirable extension of the insights gathered in the field of social assimilation to the general body of behavioural science theory.

FINANCE AND STAFF.

b, f

B

c

b, f

c, f

The finance for the studies came from three sources: the [redacted] which has provided research grant salaries to students, typing and computational assistance and general maintenance expenses.

The [redacted] gave a most generous grant to the University to provide half-time replacement for [redacted] teaching services for two years, to pay the salary of research assistants, and to subsidize travel, publication costs and general running expenses.

The [redacted] provided a grant to cover interviewing expenses in the large scale investigation by [redacted] of [redacted] immigrants in [redacted]

Staff and unpaid research students engaged on the various projects March 1959 - February 1961 were as follows:-

Staff:

B, c, f

[redacted]

and the following senior undergraduate students:-

B, c, f

[redacted]

INTERSTATE AND INTERNATIONAL CO-ORDINATION.

Cf
f
B In 1960 [redacted] made a short trip to [redacted] and the [redacted] to investigate work on the assimilation of immigrants and studies of emigrants. This trip which was financed by [redacted] proved to be a valuable source of information on current work. The observations are summarized in the report of April 1960.

C
B, f, c
B In August 1960 [redacted] and [redacted] took part in a conference on the adjustment of immigrants which was called at the [redacted]. This trip was subsidized by the [redacted]. The proceedings, including Dr. [redacted] paper and Dr. [redacted] two papers, are being edited by Dr. [redacted] and published in duplicated form by the [redacted].

SUMMARY OF RESEARCH PROJECTS CARRIED OUT.

The principal research worker and the sources of financial support are indicated.

1. Immigrant values questionnaire.

f, c, c
B (Principal research worker [redacted] assisted by [redacted]. Supported completely by [redacted].

f
f
c
f In order to study the relationships between the assimilation of immigrants and the convergence of their opinions and values to [redacted] norms, it is necessary to have a list of such norms. A pool of items was drawn up on which it was thought that [redacted] and immigrants would have different opinions, and after validation and cross-validation were carried out on [redacted] immigrants of varying origin and educational standard, a scale of 20 items was devised. This scale was subsequently shown to relate to other measures of the degree of acculturation of [redacted] and [redacted] immigrants. Thus, a useable instrument has been devised for measuring convergence of norms.

f
c, f In addition to its usefulness as a measure of assimilation, the value questionnaire also serves to high-light some representative [redacted] values with which immigrants must come to grips in the course of assimilation. Compared with [redacted] immigrants, [redacted] appear to value conformity rather than self-expression, superficial rather than intimate social contact, they are socio-equalitarians, but are less tender-minded concerning human relations, and they are less pessimistic about the future of the World than the immigrants.

Publication: It is planned to write a journal article on the construction of the value scale.

2. The role of religious institutions in the adjustment of [redacted] immigrants.

f
c, f
B (Principal research worker: [redacted] thesis supervisor: [redacted]. Supported completely by [redacted].

C The aim is to study the effect of religious affiliation, or non-affiliation, on the adjustment and assimilation of [redacted] immigrants. Variables include the degree of general and specific satisfaction of needs, acculturation, social participation, naturalisation and identification with [redacted].

f Several hypotheses are being tested on the effect on assimilation [redacted].

of factors in the various religious institutions such as their cohesion and their ethnic identification. The Questionnaires were sent out by mail and 654 useable replies were received, which represented 54 per cent of possible eligible respondents.

A Factor Analysis was carried out and after rotation three factors emerged. The first has been called Satisfaction; the second is Language, but it may be regarded as an acculturation factor. It includes facility with [redacted] on arrival and at the present time, years of education, and the difficulty of making the necessary adjustment. The third factor is that of identification which includes naturalisation, nationality of friends, membership in voluntary organizations and the assessment of one's own identification. When groups were compared on these scales, it was found that the [redacted] group was lowest on all three. Also low on Satisfaction were the [redacted] and [redacted]. Highest on this scale were the [redacted] and [redacted] in [redacted] Congregations together with the [redacted] came out highest. On the Identification scale the [redacted] group came out low, while the [redacted] and [redacted] in [redacted] congregations together with [redacted] came out highest.

The analysis is proceeding and the results are being incorporated in Mr. [redacted] thesis. Publication will be considered after the thesis has been presented.

2. The assimilation of [redacted] immigrants.
(Principal research worker [redacted] thesis supervisor [redacted] and, now [redacted] Major financial support from [redacted] and part support from [redacted])

The aim of the study was to investigate factors related to the assimilation of post-war immigrants. A sample of 118 [redacted] immigrants (mothers and fathers) were given an extensive interview in their homes.

Some preliminary results: Factors such as mixed marriages, or level of education, which have been conventionally accepted as enhancing assimilation were not significantly related to it. Other factors such as the feeling of culture superiority, often exhibited by immigrants coming from [redacted] proved to be highly significantly related to assimilation.

An enquiry into the attitudes of parents to the assimilation of their children proved most rewarding and interesting. A high correlation was found between the parents' own assimilation and their attitude towards the assimilation of their children. There were no parents who possessed both positive attitudes to their own assimilation and negative attitudes to their children's assimilation.

Regression in assimilation occurred in a relatively high proportion of the immigrants. In this respect two types of immigrants may be discerned: immigrants who regress in their identification with [redacted] but still maintain contacts with them, and those who cease to identify and withdraw from the [redacted] group, severing all connections with it. In this last group, regression occurs both at the psychological and the overt behavioural levels. Having rejoined the ethnic group these immigrants use the [redacted] language less frequently, have fewer contacts with [redacted] and generally appear less assimilated than before.

The study will be presented as a Ph.D. dissertation by [redacted] within the next twelve months.

C 4. The assimilation of [redacted] intellectuals.

F, C, B (Principal research workers [redacted] and [redacted] supported completely by [redacted])

F, B, C In 1955 [redacted] made a study by mail questionnaire of the assimilation of male [redacted] intellectuals residing in [redacted] who had come to [redacted] as refugees in the period [redacted]. Fifty useable replies were received (58 per cent of the population) which covered various aspects of acculturation, language knowledge, attitudes to [redacted] and [redacted] and convergence of opinions to [redacted].

F, C Some of the more interesting findings: it was verified that social participation with [redacted] was related to a favourable attitude towards assimilation, but that some command of [redacted] was a pre-requisite for this participation. Otherwise command of [redacted] bore no relationship to attitude towards assimilation. Married men were more favourable to assimilation than were unmarried.

C In 1960 the questionnaire was mailed again to the [redacted] intellectuals still residing in [redacted]. Fifty-one replies were received (80 per cent of the eligible subjects) of whom 34 had previously replied in 1955 (85 per cent of those still residing in [redacted]).

F The administration of the questionnaire on two occasions enabled changes to be studied and it was noted that the increase in identification with [redacted] during the five years interia period was marked, but there was little increase in adjustment satisfaction or acculturation variables. The variables on both occasions were intercorrelated and factor analyzed and four factors were found which showed a similar pattern of loadings on both occasions. These were named Satisfaction, Social and Occupational Adjustment, Identification and Acculturation. There was also a more general factor which was called Integration.

C, F A monograph has been written by [redacted] and [redacted] on this study and it is now being submitted for publication.

F, C 2. Assimilation of [redacted] migrants in a [redacted] town.

C (Principal research worker - [redacted]) Major financial support from [redacted] Partly supported by [redacted]

F This study was conducted in a semi-self-contained industrial community of approximately 2500 inhabitants on the outskirts of [redacted]. This community which was newly formed in 1954, [redacted] consists of approximately 45 per cent [redacted], 35 per cent [redacted] and 20 per cent new [redacted] immigrants, mainly [redacted].

F Interviews were conducted with a random sample of both husbands and wives in 60 [redacted] industrial households and a control group of [redacted]

f 45 [redacted] households. These interviews covered a wide range of the topics already referred to in connection with the [redacted] study described above, plus a great deal of background material on the immigrant's pre and post-migration experiences and attitudes. A preliminary analysis of the results suggests that there are three scales related to assimilation contained in the data: satisfaction in [redacted], identification with [redacted] and acculturation. These three scales, in turn, form a scale of assimilation in which satisfaction precedes identification, which precedes acculturation. These scales hold for both males and females.

An analysis has been made of the factors related to degree of assimilation and the position of the immigrants on the three sub-scales. Among the findings were clear indications that the assimilation of males is influenced by the perceived happiness of their wives. The wives are more resistant to assimilation than are their husbands. The findings indicate the paramount importance of satisfaction on the job for the men's assimilation progress.

The study has been written up in monograph form and has been submitted for publication.

- f 6. Assimilation of [redacted] immigrants in [redacted]
- C Principal research worker - [redacted] (with the assistance of [redacted] and [redacted])
 - B Major financial support from [redacted] Partly supported by [redacted]

C This study represented a replication of the [redacted] study (see above) in the same community, plus some other features.

f CC A sample of 40 [redacted] male heads of households were interviewed on a schedule that combined features of both the [redacted] interview study, and the [redacted] questionnaire study (2 above). The interviews were divided at random between a [redacted] interviewer and another [redacted]. Some of those interviewed had been respondents in the questionnaire study and others had failed to respond.

The purposes of this study were:-

- f (a) to study the adjustment of [redacted] immigrants in a known environment.
- f (b) as a reliability check on the [redacted] questionnaire study.
- f (c) to elaborate the information obtained in the questionnaire study, and to obtain information from non-respondents.
- f (d) to compare data obtained by a fellow-national of the respondents to those obtained by an [redacted]
- f (e) to cross validate the [redacted] questionnaire (see above).
- f (f) to compare results for this group of subjects with those obtained for the [redacted] immigrants and other groups.

Results:

- f 1. The [redacted] immigrants were a little less satisfied than the [redacted] and considerably less identified and acculturated. A scale analysis supported the validity and usefulness of the sequences propounded by [redacted]
- C 2. Several differences were found between the data obtained in the interviews and questionnaire studies, and also between

f Results (Cont).

the [redacted] and the [redacted] interviewers. The items that seemed to be most susceptible to change were the items related to the subjects' national identification.

f An article embodying the findings in the replication of the study is almost completed and it will soon be submitted for publication. It is also planned to write an article on the methodological implications of the study.

7. The adjustment and assimilation of immigrant and second generation adolescents.

ES (Principal research workers - [redacted] and [redacted] thesis supervisor - [redacted])
B.S (Principal financial support - [redacted]; partly supported by [redacted])

Pilot studies:

f.c (i) Conducted by [redacted] assisted by [redacted] and [redacted]

There are practical difficulties of rapport in asking children to characterize their attitude towards the roles of their parents and themselves as immigrants, and we have been seeking a disguised method which would enable these aspects to be studied in an indirect but reasonably objective fashion, and in a way that would not single them out as migrants from the other school children.

A fairly extensive trial was made on 137 children, aged 12-14, of the following types of test:-

- (a) Sociometric test.
- (b) "What are you?"
- f (c) Attitude to [redacted] and Immigrants questionnaire.
- f (d) Questionnaire on the appropriateness of the role behaviour of an [redacted] boy and of an immigrant boy on a number of complementary situations.
- (e) Questionnaire on attitude towards the role behaviour in a number of situations of immigrant parents.

The pre-tests showed some interesting results. For example, no inter-ethnic preferences were observed in the sociometric tests:

f f the more popular [redacted] children were those who mentioned [redacted] in the "What are you?" test; [redacted] were more in favour than immigrant children, that the latter should lose all "foreign" identity, although there were no differences in tolerance of immigrant parents, provided they did not bestow their immigrant identity on the children.

f (ii) In preparation for an intensive study to be conducted in 1961-62, [redacted] pre-tested some new instruments embodying the findings of the above study. With the aid of these instruments a study will be made of the degree of assimilation and the relevant desires and perceptions of second generation adolescent boys.

8. Frames of reference towards the assimilation process.

F, C
F, B, B

(Principal research worker [redacted] Major financial support from [redacted] partly supported by [redacted]

An important variable determining the course of the assimilation process is the overall conception of this process held by the immigrant groups and the host society. For example, do they favour the social segregation of immigrants, foreign language newspapers and broadcasts, compulsory naturalization after a certain number of years of residence, etc?

C, F

In a theoretical article [redacted] distinguished those frames of reference towards the assimilation process: [redacted]

C

[redacted] and [redacted] Data relevant to these frames of reference have been collected in almost all of the studies of immigrant

f

groups described above, and also from [redacted] control groups.

f

The data are being analyzed in terms of: what are the typical frames of reference of the various ethnic groups, how do [redacted] and immigrants perceive the frames of reference of the other groups, and what are the correlates of holding one particular frame of reference?

f, C
f

A most important finding was that the immigrants overestimate the degree to which [redacted] hold a [redacted] frame of reference, and the [redacted] overestimate the immigrants' pluralistic frame of reference.

It is planned to analyze the data further and to write a journal article on these studies.

9. The attitudes of the host community towards immigrants and their assimilation.

C, F
F, B
B

(Principal research workers [redacted] and [redacted] assisted by a Psychology III class. Major support [redacted] partly supported by [redacted]

The course of the assimilation of any individual immigrant is influenced by the attitudes which he meets from the receiving community. In order to study this, an interview study was carried out by the members of the Social Psychology Class after prior training. The interviewees were a representative sample of 200. The study covered such topics as: their attitudes to immigration in general and to specific ethnic groups, their social distance from members of those groups and their attitudes towards the assimilation of immigrants. In addition, to provide a control base-line for the data from immigrant groups, the subjects were interviewed concerning their satisfaction with life and their identification with [redacted]

f

The analysis of these data is proceeding.

MEMORANDUM FOR THE RECORD

SUBJECT : MEXICANA, Subject No. _____

1. The title of this project is _____

C, F

_____ The purposes of this project are (a) to elaborate and refine a paralinguistic model for the study of social assimilation which has been propounded by _____ the principal investigator, (b) to test this model with a set of data observed from _____

C, F

F

_____ emigres, (c) to cross-validate findings of other studies we are sponsoring on cultural, social and personality characteristics of _____

C, F

_____ emigres. _____ psychological model adds considerable promise for organizing data on defectors; the special class of emigres of interest to this Agency. This study is primarily undertaken in response to a continuing operational requirement to contribute to the understanding and knowledge of sources of defections.

C, B, F

2. _____

_____ will be principal investigator. His research proposal, under the signature of the Vice-Chancellor of the University, is attached together with a précis of the psychological model.

B

B, F, B

3. A grant from to _____

_____ will be made to it. _____ Dover for the grant will be in _____ interest in supporting and coordinating _____

f research on [REDACTED] [REDACTED].

4. Funding and supervision of this project will be handled
 B by the [REDACTED] in the
 total market. Accounting for the funds expended will be according
 B to the procedures previously established for the [REDACTED] relative to
 grants to visiting agents. Any unexpended funds remaining at the con-
 clusion of the project will be returned to the Agency. It is not antici-
 pated that any permanent equipment will be acquired during the project.
 Travel funds will be accounted for in a manner consistent with the
 established practice of the [REDACTED]

B 5. The total cost of this project for a period of one year
 commencing 1 January 1957 will be \$11,180.00. Charges should be
 made against Allocation 7-5501-05000.

NOTES ON THE [REDACTED] PROPOSAL

B, f, c

1. We are requiring the research group to limit their new data collection efforts to emphasize an [REDACTED] rather than [REDACTED] immigrants, and to retaining the data analyses to validating and giving substance to [REDACTED] models.

B, c, f, c

2. By so limiting the project it will be possible to cut the proposed budget by approximately 40%. The modified budget is \$11,781.00.

B, f, c, c

3. The feasibility of reducing the study to these limits was discussed with [REDACTED] Department and [REDACTED] during the latter's recent visit to the United States. [REDACTED] indicated that the reduction would be quite feasible.

MEMORANDUM FOR: [redacted]

SUBJECT: C, f [redacted]

C, f, B
B, C, f

1. The proposal dated 28 July under the signature of [redacted] is one which I actively encouraged from the principal investigator, [redacted] is a very bright and productive American trained social psychologist who has produced an interesting and potentially very useful psychological "model" for the study of [redacted]. I regret that the prospectus does not describe the model in some detail because it is this aspect which is of greatest potential interest to [redacted]. Of course, the report of [redacted] there would also provide a nice comparison for some of our American and [redacted] data. Finally, the selling point of having a project in [redacted] adds further support to the international research interests of the [redacted]. This is undoubtedly the most interesting project we could support in [redacted].

C
C, B
C, f
B, f
f

2. I can see how the prospectus as it stands would have little appeal to the directors. If you have not already distributed it, I hope you will add in your cover letter the remarks I have made in paragraph one above. I recently entertained at dinner [redacted] chairman of the department in which [redacted] is working. [redacted] is spending a sabbatical year in this country, at the [redacted]. I discussed the project with him and emphasized the fact that the proposed budget was considerably larger than we had anticipated. He implied that it could be cut considerably without destroying the project, only slowing it down. I have the idea that the [redacted] study and support for [redacted] was thrown in to try us out for size.

C, f
C, f
B
C, f

3. I therefore propose that we offer about \$10,700.00 to be distributed over two years. This is essentially the same budget with [redacted] and his assistant eliminated. This could go either as a small grant (which would be our preferred way) or as a special project (which will take more time to sell to the donors).

C, f

4. If the directors buy this, perhaps the attached outline for a letter to [redacted] will be useful to you.

f

C

[redacted]

August 13, 1950

C, F, B

Dear Mr. [REDACTED]

I feel that the request contains sufficient information for the Director upon which to base a decision and will refer it to him at the next Board meeting. Board was meeting at the time place for several weeks, I cannot promise to reply until late in the year or early next year. I hope this will not cause you too much inconvenience.

Sincerely yours,

C

B, C, F

August 20, 1958

A Memo to [redacted]

C From: [redacted]

B, F Subject: Project Proposal [redacted]

Attached is a proposal that we have received and forwarded to the Directors. We have received one unfavorable reply. However, this is an excellent opportunity to spread into other countries. We would appreciate your thoughts regarding this proposal.

C [redacted]

A [redacted]

C, F [redacted]

C, F [redacted]

This is a proposal I actively encouraged through conversations with the principal investigator [redacted] whom he wanted us to host fall. The project is rather imprecise, to say the least, but [redacted] has an impressive record of productivity for a relatively young man working in a relatively isolated university. I had not anticipated the amount of money he requests, and I think they could do some good things in about half the sum they are requesting, so that spread over two years it could come out of the small grant fund. If the Director's turn it down, of course I feel we have had it.

A [redacted]

B.F.

B.F.

B.F.

28th July, 1958.

B

Dear Sir,

I am writing to ask whether the [redacted] would be willing to assist the Department of Psychology of the [redacted] a research project on [redacted]

B
C, f

The attached statement of the Department envisages a programme for the calendar years 1959 and 1960 with [redacted] as part-time research coordinator and with [redacted] as part-time associate. As is indicated by the list of publications attached to this statement, the proposed research represents the culmination of a research programme which the Department has been supporting for several years. Other projects in the Department, such as studies of industrial relations, relations between coloured and white school children, and surveys of old age in [redacted] have also included techniques which may be used in the proposed study of [redacted]

C, f
C, f

Two considerations have governed the choice of the size of the project submitted. In the first place, it was believed desirable that the project should be sufficiently large to permit generalisation from several somewhat differently oriented enquiries, and secondly it was necessary that the project should be restricted so as not to become unwieldy and impractical for the research workers concerned. The estimated total cost for the project, as here designed, is £16,430 [redacted]. With assistance of this order the

f
C, f
f

CERTIFICATION

This is to certify that on several occasions a final accounting for \$111.23 has been requested from MCLERA Subproject # 74. This is attested to by the attached memorandas. It is apparent no accounting is forthcoming, the unaccounted for balance of the original grant of \$15,000 is being written off.

I further certify that satisfactory services have been derived from this grantee for the purpose authorized by the project approval.

A

~~XXXXXXXXXX~~
C/TED/BAB

74-113

December 19, 1966

Memorandum for TSD Finance

Subject: [REDACTED] Grant to

B, f
B

The original grant to the above named [REDACTED] was in the amount of \$13,611.23 which was paid to the [REDACTED]. However, the Fund received from its Sponsor the sum of \$15,000.00. This meant that the Fund was holding the sum of \$1,388.77. As the project progressed, an additional grant in the amount of \$1,500.00 was requested. This meant that an additional \$111.23 needed to be added to the existing \$1,388.77 to complete the grant. This was done.

Since this was \$15,000 from a special source that was written off earlier, it left \$111.23 to be accounted for. Attached find the last two letters (copies) that were sent in attempting to get an accounting for the \$1,500 grant.

In view of the fact that the Fund did not follow through on helping get their report published or maybe the chief investigator has left, we have never received a reply. I would suggest writing this sum off the books.

Dr. [REDACTED]

Dear Dr. [REDACTED]

Thank you for your letter of February 5. It clarified a number of points about which I had been confused.

I am pleased to inform you that, on the basis of your letter, the Board of Directors has approved a supplementary grant of \$1,500.00 for your project. We are directing our bank to pay you the [REDACTED] equivalent.

It is my understanding that we will receive two typewritten copies of the report in [REDACTED]. I feel that the original agreement with [REDACTED] that you referred to is a good one. We can best consider your questions of printing and production at a later date.

The Board of Directors joins me in wishing you success in the completion of your endeavor.

Sincerely yours,

C

CERTIFICATION

This is to certify that I have received an accounting from
MKULIRA Subproject # 74 which reflects expenses of \$750.00.
The accounting is being retained in TSD where it may be reviewed
by the certifying officer upon request.

I further certify that satisfactory services represented
by the accounting have been received and that to the best of my
knowledge and belief the funds expended were for the purpose
authorized by the project approval.

C

Dear [REDACTED]

B

This is in response to your letter of October 14, 1965 regarding the grant of \$1,550 to me by the [REDACTED]. The money was paid to me directly by the Fund as compensation for time released by the [REDACTED] so that [REDACTED] and I could cooperate on a joint research endeavor. The details of this arrangement were worked out by [REDACTED] when [REDACTED]. If you would like any additional information about the terms of the grant, I can refer you to [REDACTED].

B

CC

If I may be of any further assistance to you on this matter, please do not hesitate to contact me.

Sincerely yours,

[REDACTED]

[REDACTED]
As you most likely recall, ^C [REDACTED] wrote you back in October about a few grant balances that were still unaccounted for. Thanks to you some of them have been cleared up. I'm afraid though, that there are still a few which have not as yet come in even though you followed-up on them very promptly. It would be appreciated if you could give us some further help on these we still have not received. They are as follows:

^{C, B} [REDACTED] ^C
\$4,500.00
111.23
750.00
1,147.90 (We have

received a reply and a refund from [REDACTED] but he was asked for more detail on his expenses.)

We would like to receive copies of any correspondence you may initiate or receive on this matter.

Thanks again for your help.

^C [REDACTED]

74-126

CERTIFICATION

This is to certify that I have received an accounting from MCOLTRA Sub-project #74 for the period JUNE 1960 - 30 November 1965. The accounting reflects expenses for the entire remaining grant balance.

The accounting statement and payment certification will be retained in TSD and will be made available for review in TSD if necessary.

I certify further that satisfactory services represented by the accounting have been received and that to the best of my knowledge and belief the funds expended were for the purposes authorized by the project approval.

October 13, 1964

Dear [redacted]

Since our family vacation in August was followed directly by my trip to [redacted] to the annual convention of the [redacted] there was an unavoidable delay in receiving your letter of August 28. At the earliest possible date upon returning, I asked the [redacted] to request an accounting of funds granted by the [redacted] from the Internal Auditor, since all expenditures from the grants were deposited with the [redacted] and every payment was made with clearance of the appropriate administrative officer. I should think that you will receive the Internal Auditor's report any day.

Let me take this opportunity to express appreciation to the Fund for its timely support of our research program on behavior of members in small groups and the reference scales of their cultural-ecological settings. In addition to our acknowledgment of the Fund's support in various papers and our recent book [redacted] it has been my pleasure to express this appreciation publicly in presenting the research to several university and national gatherings of professional colleagues. In fact, chiefly because of its sponsorship of much of the research to be reported, I agreed to [redacted] invitation to discuss the papers at the [redacted] at the [redacted] in [redacted] on September 5, and I had further opportunity to refer to the Fund's support in my own [redacted]

The research completed in the period of the more recent grants from the Fund is to appear with due acknowledgment in our forthcoming book [redacted] to be released the early part of 1965 by [redacted]. We take it that you and other officers may share in some measure our own pleasure at seeing the remaining research completed with [redacted] support appear in print between the covers of a book.

Sincerely yours,

Director

B
[REDACTED] Chairman

Dear Dr [REDACTED] C

Thank you for your prompt reply and your check for \$797.90.

Unfortunately, the [REDACTED] B auditors would appreciate a summary of the actual expenditures. Sorry to bother you again.

Thank you for the kind things you said about the Fund and we all look forward to your publication.

Sincerely, [REDACTED]

C
[REDACTED]
Treasurer

C
Dear 

Attached are carbon copies of letters I have sent to our delinquent grantees. As you can see, in each case, I had written to them about a year ago with no results.

Let us hope we have better luck. In some of these cases the amounts are different from yours but don't let that bother you.

C

Dr. [REDACTED]

Dear Dr. [REDACTED]

On September 8, 1964, we wrote you regarding various past accountings for grants given you by the [REDACTED]. We are in receipt of an accounting for the last grant given you in the amount of \$1,200.00.

In as much as the [REDACTED] has suspended its granting activities, our auditors require accountings of all outstanding accounts. The accountings we require from your organization are as follows:

June 6, 1960	\$1,000.00
Oct. 1, 1960	6,500.00
Feb. 8, 1961	1,500.00
Jan. 27, 1962	1,500.00
Jan. 25, 1963	1,500.00

Your prompt attention to this matter would be appreciated.

Sincerely,

C
[REDACTED]
Treasurer

Your prompt attention to this matter would be appreciated. If your final report on [REDACTED] is ready, we would be very interested in receiving a copy.

Sincerely,

C
[REDACTED]
Treasurer

74-153

13 October 1965

C [REDACTED]
I am trying to pickup the many loose ends on TSD grants. It appears that accountings are due or past due on the following:

B, F	{ [REDACTED]	\$7,136.25
		3,000.00
C, F	{ [REDACTED]	4,500.00
B	{ [REDACTED]	111.23
C	{ [REDACTED]	750.00
		1,147.90 ✓

C [REDACTED], you must realize that the above information was taken from some rather antiquated workpapers passed to me by [REDACTED]. The amount outstanding does check back to our memorandum account balance so I venture a guess that the amounts are correct. If you could bring me up to date on the status of these grants, I would be most grateful.

A

C
B
Dear [REDACTED]

I have been going over the [REDACTED] quarterly statements and find an item that, Finance Division, Audit Staff and TSD/B&F failed to take into consideration in the past.

B On your [REDACTED] Statement of Income and Expenses the item "Grant Refunds (Returns)" has heretofore been completely ignored as being part of [REDACTED] grant activity.

Would it be possible for you to furnish complete detail on this, i.e. Grantee and amounts back to October 1963.

A. Memo to [REDACTED]

C From [REDACTED]

C Re: Accounting [REDACTED] 903-6

Attached is a copy of the accounting received by

B the [REDACTED] from the above named Grantee.

I am not sure if you are aware of the fact that

C [REDACTED] is becoming an employee of ours and the remainder
of his funds will be used to defray some of his expenses.

A separate quarterly accounting will be continued on

C [REDACTED]

January 23, 1955

Miss [REDACTED]
Treasurer [REDACTED]

C Dear Miss [REDACTED]

In checking our records we do find considerable
C correspondence with Mr. [REDACTED] Executive Director
of the [REDACTED] concerning its grant of
B \$1,000, to [REDACTED] to cover the [REDACTED]

B [REDACTED] which was held in [REDACTED] on [REDACTED]
We have not, however, a record of a detailed account
of how we spent this money; rather, our report to
C Mr. [REDACTED] was informal in nature and indicated that
all of the \$1,000, was spent to cover printing costs of
the proceedings.

We enclose a copy of the proceedings which was published
using your funds and you will note we have acknowledged
in it the use of the grant for this purpose. (SEE ENCL NO PAGE)

In checking back on the actual printing costs for this
B publication, we find that we had 1000 copies of the booklet
published by [REDACTED] at a cost of \$1,287. So we actually supplemented
your grant with \$287 to pay the complete printing costs.
B The bills from [REDACTED] to us for this printing
are numbers 481 and 583.

B Since [REDACTED] received a grant from the [REDACTED]
B [REDACTED] to publish these proceedings, it has distributed them
freely to attendees to the clinic, medical schools, major
hospitals and individual medical research people who have
asked for copies. Over 950 copies have been distributed

74-168

C
Miss [REDACTED]
January 25, 1963

December 10, 1963

Dear Miss [redacted]

Thank you for your recent letter regarding the [redacted] funds for which I am responsible. I am happy to outline the present status of these funds for you.

I was initially granted \$4500 to develop a critical review of the status of [redacted] research. It was proposed to organize this review in four general areas: physiological aspects, behavioral aspects, pharmacological aspects, and psychiatric aspects. Shortly after receipt of the funds two things became apparent: (1) The imminent appearance of books by [redacted] and [redacted] minimized the requirement for a broad and comprehensive survey approach. (2) A more effective and still needed work would be best accomplished in a more focused fashion.

With these considerations in mind the program was revised to work in two areas: (1) the rapidly developing area of [redacted] aspects of [redacted] which had exploded around the interest in the [redacted] formation, and (2) the area of [redacted] therapy which had had limited consideration in this country because most of the work was in foreign journals (primarily Russian, German and French).

At this point \$2000 was returned to [redacted] (7-3-62). Since that time the following expenditures have been made from the remaining \$2500:

By check to:

Dr. [redacted]

MEMORANDUM FOR: THE RECORD

SUBJECT : Supplement to Project MKULTRA,
Subproject 74

B
B

1. With this request for supplemental funds the purpose of Subproject 74 will be increased considerably in scope. The original purpose, to enable the [REDACTED] to make small "cover" grants for studies which are not of immediate interest to TSD/RB in order to propagate the [REDACTED] present cover of being interested in the broad field of human ecology, will remain. The level of effort and the considerations governing the use of funds for "cover" purposes will remain the same as outlined in the Memorandum for the Record, dated 2 August 1961. The supplemental funds requested will be used in support of the development program being spearheaded by C/BAB/TA/TSD.

A

2. The Behavioral Activities Branch has undertaken responsibility for developing a number of psychological aids to the point where they have a potential for current operational usage by the operating divisions of the DD/P. These developments include the [REDACTED] assessment technique, other indirect assessment techniques, training techniques, psychological and psychopharmacological aids to interrogation and elicitation, studies of motivation and attitudes, and any other developments which could increase the scope of psychological support for Agency operations. Research funds

[REDACTED]

utilized in the past for a number of research studies in support of this kind of effort will now be absorbed under Subproject 74. The [REDACTED] will serve as cutout and administrator for the disbursal of these funds. Expenditures will be made in direct support of the program of the Behavioral Activities Branch.

3. The costs for this additional support are estimated not to exceed \$14,000 for a period of one year. Charges should be made against Allotment 2125-1390-3902. Accounting for these funds shall conform to procedures established for the [REDACTED].

4. The [REDACTED] will require the grantees or the institutions of which they are members to submit annual accountings of a nature which is customary for this type of grant.

5. The grantee will document and account for any travel expenses which are reimbursable by this parent organization and will conform with the accepted practices of that organization. If the grant should be made to an independent individual, any travel expenses will be accounted for in his accountings to the [REDACTED].

6. Individual grants made under this subproject will bear the prior approval of the Assistant Chief for R&D as requested by the Chief, TSD.

MEMORANDUM FOR: THE RECORD

SUBJECT: MKULTRA, Subproject 74

B
B
B
1. The purpose of Subproject 74 will be to fulfill what is considered a deficiency in the present cover of the [redacted]. At the present time the [redacted] has been making grants to large institutions for research work of immediate interest to TSS/CD. It is felt that for the [redacted] to continue to propagate its present cover of being interested in the broad field of human ecology, it will be necessary to make "cover grants". These grants will be small monetarily and will not necessarily be of immediate interest to TSS/CD. However, it is thought that they will contribute materially to the cover and security of the [redacted].

B
B
2. At a meeting of the Board of Directors of the [redacted] on 11 March 1957, at which the DCI was present, this matter was discussed in full. The DCI at that meeting assured the Board that he understood and approved of the necessity for the [redacted] to engage in certain activities not related to our immediate interests in order to validate itself.

B
B
B
3. At the present time it is not possible to anticipate how many grants will be made nor who the grantees will be. However, each grantee's application to the [redacted] will be reviewed by the authorized [redacted] mechanism and a decision made for acceptance. Upon approval of the [redacted] the proposed grant will then be approved by C/TSS/CD and C/TSS.

4. It is estimated that the total cover grants will not exceed \$25,000.00 for a period of one year. Charges should be made against Allotment 7-2502-10-001.

B
5. The [redacted] will require these grantees or the institutions of which they are members to submit annual accountings of a nature which is customary for this type of grant.

6. The grantee will document and account for any travel expenses which are reimbursable by his parent organization and will conform with the accepted practices of that organization. If the grant

12 April 1962

MEMORANDUM FOR: THE RECORD

SUBJECT : Supplement to Project MKULTRA,
Subproject 74

1. With this request for supplemental funds the purpose of Subproject 74 will be increased considerably in scope. The original purpose, to enable the [redacted] to make small "cover" grants for studies which are not of immediate interest to TSD/RB in order to propagate the [redacted] present cover of being interested in the broad field of human ecology, will remain. The level of effort and the considerations governing the use of funds for "cover" purposes will remain the same as outlined in the Memorandum for the Record, dated 2 August 1961. The supplemental funds requested will be used in support of the development program being spearheaded by C/BAB/TW/TSD.

2. The Behavioral Activities Branch has undertaken responsibility for developing a number of psychological aids to the point where they have a potential for current operational usage by the operating divisions of the DDP. These developments include the [redacted] assessment technique, other indirect assessment techniques, training techniques, psychological and psychopharmacological aids to interrogation and elicitation, studies of motivation and attitudes, and any other developments which could increase the scope of psychological support for Agency operations. Research funds

utilized in the past for a number of research studies in support of this kind of effort will now be absorbed under Subproject 74.

B [redacted] will serve as cutout and administrator for the disbursement of these funds. Expenditures will be made in direct support of the program of the Behavioral Activities Branch.

3. The costs for this additional support are estimated not to exceed \$20,000 for a period of one year. Charges should be made against Allotment 2125-1390-3902. Accounting for these funds shall conform to procedures established for the [redacted]

B 4. The [redacted] will require the grantees or the institutions of which they are members to submit annual accountings of a nature which is customary for this type of grant.

5. The grantee will document and account for any travel expenses which are reimbursable by this parent organization and will conform with the accepted practices of that organization. If the grant should be made to an independent individual, any travel expenses will be accounted for in his accountings to the [redacted]

B 6. Individual grants made under this subproject will bear the prior approval of the Assistant Chief for R&D as requested by the Chief, TSD.

Research Director

Date: _____

DRAFT/ [REDACTED] A
2 August 1961

MEMORANDUM FOR: THE RECORD

SUBJECT : Continuation of MKULTRA; Subproject 74

B 1. The purpose of this project will remain the same as when
it was originally established: to enable the [REDACTED]
to make small "cover grants" for studies which are not necessarily
of immediate interest to TSD/RB in order to propagate the [REDACTED]
B present cover of being interested in the broad field of human ecology.

B 2. The continuing mechanism of "cover grants" was established
with the approval and concurrence of the DCI at a meeting of the Board
of Directors of the [REDACTED] on 11 March 1957. In addition approval was
granted in February 1959 for the Board to disburse these grants at its
own discretion. The major consideration in the use of these funds is
to remain as originally laid down: that is, the funds should be spent
over as large a number of small projects as possible in order to achieve
maximum value in a cover sense. A secondary consideration in every
case is that information of particular value to the Agency might be
obtained. The purpose of changing the original procedure was twofold.
By eliminating the multiple approval originally required, a certain
amount of administrative delay in the initiation of projects could be
eliminated. In addition, it is thought that the Board itself could function
in a much more authentic fashion if, during each year, it has available
this sum of money for disbursement on the basis of its own authority.
[REDACTED]

B 3. The [redacted] shall function as cover and cutout for this project. The total estimated costs for the "cover" grants is \$25,000.00 for a period of one year. To this must be added \$1,000.00 which represents the 4% service charge due to the cutout. The cost of the project for one year, therefore, will not exceed \$26,000.00. Charges should be made against Allotment 2125-1390-3902.

B 4. The [redacted] will require these grantees or the institutions of which they are members to submit annual accountings of a nature which is customary for this type of grant.

5. The grantee will document and account for any travel expenses which are reimbursable by his parent organization and will conform with the accepted practices of that organization. If the grant should be made to an independent individual any travel expenses will be accounted for in his accountings to the Fund.

DRAFT
23 May 1960

MEMORANDUM FOR: THE RECORD

SUBJECT : Continuation of MKUITRA, Subproject 74

1. The purpose of this project will remain the same as when it was originally established: to enable the [REDACTED] to make small "cover grants" for studies which are not necessarily of immediate interest to TSS/CD in order to propagate the [REDACTED] present cover of being interested in the broad field of human ecology.

2. The continuing mechanism of "cover grants" was established with the approval and concurrence of the DCI at a meeting of the Board of Directors of the [REDACTED] on 11 March 1957. In addition approval was granted in February 1959 for the Board to disburse these grants at its own discretion. The major consideration in the use of these funds is to remain as originally laid down: that is, the funds should be spent over as large a number of small projects as possible in order to achieve maximum value in a cover sense. A secondary consideration in every case is that information of particular value to the Agency might be obtained. The purpose of changing the original procedure was twofold. By eliminating the multiple approval originally required, a certain amount of administrative delay in the initiation of projects could be eliminated. In addition, it is thought that the Board itself could function in a much more authentic fashion if, during each year, it has available this sum of money for disbursement on the basis of its own authority.

3. It is estimated that the total cover grants will not exceed \$25,000.00 for a period of one year. Charges should be made against Allotment ~~0525-1009-1902~~ 1525-1009-1902

4. The [redacted] will require these grantees or the institutions of which they are members to submit annual accountings of a nature which is customary for this type of grant.

5. The grantee will document and account for any travel expenses which are reimbursable by his parent organization and will conform with the accepted practices of that organization. If the grant should be made to an independent individual any travel expenses will be accounted *B* for in his accountings to the [redacted]

MEMORANDUM FOR THE RECORD

SUBJECT: Disbursement of Funds Under Project MKULTRA Subproject 74

1. At the joint meeting of representatives of TSS and the Board of Directors of the [REDACTED] which took place in [REDACTED] on 20 October 1958, it was decided that the funds made available by TSS in Subproject 74 would henceforth be disbursed at the discretion of the Board of Directors of the [REDACTED]. The major consideration in the use of these funds was to remain as originally laid down: that is, the funds should be spent over as large a number of small projects as possible in order to achieve maximum value in a cover sense.

A secondary consideration in every case is that information of particular value to the Agency might be obtained. The purpose of changing the original procedure was twofold. By eliminating the multiple approval originally required, a certain amount of administrative delay in the initiation of projects could be eliminated. In addition, it was thought that the Board itself could function in a much more authentic fashion if, during each year, it had available this sum of money for disbursement on the basis of its own authority.

2. In order to implement this decision the remainder of the funds obligated under FY-59 are being transmitted to the [REDACTED] for its use. The amount is \$11,775.00 chargeable to Allotment 9-2502-75-902.

Dr. [REDACTED] - C

- B

Dear Dr. [REDACTED] - C

Enclosed is the check in payment for your travel expense.

I agree with you that the \$3,000 allocated to [REDACTED] does appear excessive. I plan to make a visit there very shortly in an attempt to obtain clearer definition of the charge. There are some other administrative complications that may need to be worked out also and one scientific consideration that concerns me a little bit. I would hate to see our task carried too far into the realm of economics, and it is my impression that the [REDACTED] group is devoted to their own concept of the overwhelming importance of economics in human behavior. I am not prepared to say what weight should be given to "economic determinism," but I am sure that it is far from being the sole motivating force.

It was a real pleasure seeing you again. I should like to repeat my statement of gratitude for your strong support.

Sincerely yours,

C - [REDACTED]
Executive Secretary

MEMORANDUM FOR: THE RECORD

SUBJECT : Supplement to Individual Grant Under
MKULTRA, Subproject No. 74

1. Subject to the approval of C/TSS the Board of Directors [REDACTED] [REDACTED] has recommended that a grant be made to [REDACTED] Prof. [REDACTED] for the purpose of continuing a research program in [REDACTED] in accordance with the attached proposal. The proposal serves both as a progress report and as a summary of project plans.
2. It is anticipated that long term support for this study will be provided by [REDACTED]. The present supplement and continuance of [REDACTED] grant is intended to support the project during the interim period before the [REDACTED] grant becomes effective.
3. The total cost of the continuance of this project will amount to \$5,000.00 for a period of 3 months starting 1 October 1958. Charges should be made against Allotment 9-2502-75-902.
4. The [REDACTED] will supply [REDACTED] [REDACTED] with copies of the records of disbursements related to the operation of this project at its termination. Title to permanent equipment purchased under this project will be retained by the University in lieu of overhead charges. Any unused funds will be returned to [REDACTED] upon termination of the grant.
- [REDACTED]

PROPOSED RESEARCH PROGRAM

in

Principal Investigators

C [REDACTED] Ph.D., Professor, Departments of Psychology and
Psychiatry, [REDACTED]

C { [REDACTED] M.D., Assoc. Professor and Chairman, Department
of Psychiatry, [REDACTED]

[REDACTED] Ph.D., Ass't Professor, Clinical Psychology,
Department of Psychiatry, [REDACTED]

Purpose

This program will undertake a coordinated investigation of the relationship between the psychological expression of feelings and emotions on the one hand, and their biological and physiological expression on the other. To put it another way, it is to correlate the conscious, verbal, symbolic expression of feelings with those modes of discharging feeling of which the individual is unaware -- the various physiological responses which occur in the organism.

The investigation will be carried out across individuals and groups to determine the relationship between the psychological and physiological expression of feelings in differing pathological and normal groups. It will be carried out longitudinally on individuals in psychotherapy to determine whether the relationship between the psychological and physiological expression of feelings changes during a period of change in personality and behavior.

It is the general purpose of this inter-disciplinary study to add to our basic knowledge of man as a whole physiological and psychological organism, and to our basic knowledge of the way in which significant change occurs in man.

Previous Related Work

In recent years the various disciplines concerned with man's emotional behavior have come to converge increasingly into a holistic view. Psychologists (18, 21, 28), psychiatrists (3, 4, 9, 10), internists (12, 13, 19), physiologists (34) and biochemists (6) have come to borrow freely from one another in theory and investigational techniques in pursuit of understanding the role of emotion in adaptation.

This convergence has been especially evident in the interest in psychosomatic illness where there have been investigations of particular emotional states believed to be related to specific illnesses. The work of Harold Wolff and various associates (14, 24, 25, 26) and of Alexander (1, 8) is well known. [REDACTED] B+D is currently pursuing this same line.

Some work has also been done in identifying the patterns of physiological response to emotions in different diagnostic groups. Investigation of the somatic response mechanisms of psychoneurotics (22), of the comparative heart rates in psychosis and neurosis (39), of the heart rate in anxious patients (11), of the hippuric acid secretion in schizophrenics as compared with depressives (6) --- these are some of the studies which have been made. Such studies have particular relevance for the cross-sectional aspect of the present program.

There are also a number of studies which have made continuous recordings of physiological changes during therapeutic or other significant interviews. Lasswell (17) was one of the first to study the relationship between verbal expression in an interview and physiological indices of emotion. Some of the more recent work has been done by Mowrer and associates (27) measuring palmar sweating; by DiMascio and Boyd (5), measuring heart rate and heart lability; by Anderson (2), taking a continuous EKG during the sessions; by Shagass and Malmö (35), who have been particularly interested in action potentials in the muscular system; by Margolin (23), who has studied the behavior of the stomach; and by a group at Michael Reese Hospital, Chicago, studying heart action before, during and after a stress interview.

The studies mentioned (and these are by no means all) indicate that the relationship between psychological and physiological expression of feelings has already been subjected to considerable scrutiny. It is our belief, however, that most of the work to date has suffered from a lack of clearly defined hypotheses derived from an intimate knowledge of emotional processes as revealed in the process of psychotherapy. The hypotheses to be tested here are derived primarily from observation of persons undergoing the process of change in psychotherapy.

[REDACTED]

[REDACTED]

[REDACTED] It is believed that this more rigorous theoretical base will enable us to pursue more precise and significant hypotheses. The methods for investigating

Clinically we observe repeatedly the difficulty which the emotionally ill have in discharging their emotions. Indeed, maladjustment has been defined in part as the inappropriate persistence of emotion. Partial confirmation of this hypothesis is found in the work of Malmo et al (22), who found that in psychoneurotic subjects elevation of blood pressure persisted longer than in normals when subjected to an affective stimulus.

III. The reaction-time to an emotional stimulus will be greater in a psychiatric population than in a normal one.

Again, we observe clinically that the emotionally ill appear to struggle with the meaning of a stimulus and that this process takes time. This hypothesis, too, has been partially confirmed in the work of Smith (36) and in the work of Malmo, previously cited.

IV. The amplitude of physiological responses to a given stimulus will be greater in a psychiatric population composed of behaviorally constricted persons than in normals.

The reasoning here is that, if emotion cannot be fully discharged externally, it will tend to be discharged internally. The peptic ulcer personality would seem to be a clinical instance lending support to such a hypothesis. Jones' (16) work tends to support this hypothesis also.

V. The amplitude of physiological responses to a given stimulus will tend to be less in a psychiatric population composed of "acting-out" persons than in normals.

The reasoning here is the converse of the foregoing -- that the

more emotion is behaviorally discharged, the less it will be manifest internally in the organism. Again, some of Jones' work suggests such a difference.

VI. Symbolization (the ability verbally to define one's feelings) of physiological change will be less accurate in a psychiatric population than in a normal one.

This hypothesis is partly a clinical hunch and partly grows out of our personality theory. It is based on the observation that accurate symbolization seems crucially dependent on full awareness and that degrees of unawareness characterize maladjustment and psychiatric illness.

VII. The variability of symbolization in the psychiatric population will be greater than in normals.

This hypothesis is predicated on the expectation that, if normals report accurately, the range will be narrow while a psychiatric population might be expected to err in many directions as a function of differential ways of handling feelings. For example, we observe that obsessives symbolize their experience differently from hysterics, etc.

VIII. A normal population will more accurately identify feelings in others than will a psychiatric population.

Many workers, among them Fey (7) and Stock (37) have demonstrated previously that there is a close relationship between perception of self and perception of others. This hypothesis then seeks to confirm and extend previous work but, in this instance, with the specific focus the perception of feelings in others.

IX. The ability or inability to recall emotional stimuli will be correlated with differential patterns of physiological response to the stimuli which are remembered, on the one hand, and forgotten, on the other.

Iflund (15) has demonstrated that stimulus material is differentially recalled as a function of the meanings which such stimuli have for the perceiver. The present hypothesis extends this finding with the expectation that stimuli which will subsequently be forgotten will elicit a different physiological response than will those stimuli which will subsequently be recalled. Framed in clinical terms, the testing of this hypothesis attempts to demonstrate some of the physiological concomitants of repression.

Method

Samples from normal and psychiatric populations will serve as the control and experimental groups for this cross-sectional study. Both groups will be exposed to standardized stimulus material selected for its emotion-inducing value.

Using a behavior polygraph modified for the purpose of this study, the aim would be to obtain continuous recordings of as many of the following physiological variables as proves to be feasible without seriously interfering with the subjects' functioning in the experimental situation: heart rate, heart rate variability; blood pressure -- systolic and diastolic; blood flow; skin temperature; breathing rate, and depth of breathing; action potentials of muscles; galvanic skin reflex; electroencephalogram; tear duct activity. In addition, blood samples

may later be used for such biochemical determinations as serum cholesterol level, epinephrine and nor-epinephrine levels, eosinophile counts. These recordings will make it possible to define the character of the physiological responses as well as their duration and amplitude.

While these physiological recordings are being made the verbal symbolized expression of the subject's emotional experience will be recorded on a studio-quality tape recorder. The verbal productions can then be analyzed and categorized in terms which will permit definition of the accuracy and variability of symbolization. This portion of the design will test Hypotheses I through VIII. Subsequently, the subjects will be asked to attempt to recall the stimuli which have been presented. This aspect of the design will test Hypothesis IX.

The Longitudinal Investigation of
the Process of Change

Since this second aspect of the program is in considerable degree exploratory, it is not now possible to formulate all of the hypotheses to be investigated. Some of the initial hypotheses can however, be spelled out. They are stated here in general form for more ready communication, but will be translated into operational hypotheses in terms of the methods described later in this statement.

I. In the initial stages of the process of psychotherapy, physiological changes indicative of an organismic emotional response will frequently occur in conjunction with verbal statements which are not expressive of emotion.

The rationale here is that feelings which are denied to awareness, or which are unacceptable to the client, will occur at the

physiological level, but cannot be given direct verbal expression.

II. In the later stages of the process of psychotherapy, physiological changes indicative of emotional response will tend to be accompanied by direct verbal expression of an equivalent degree of emotional response.

The rationale is that as the individual can admit his experiences in awareness, and feel acceptingly toward them, his verbal expression, in a safe therapeutic relationship, will come to match his organismic state.

III. In the condition specified under I. (where verbal expression is not congruent with physiological reaction) the physiological deviation from the normal will tend to persist.

IV. In the condition specified under II. (where there is, generally speaking, a congruence between verbal expression and physiological reaction) the physiological deviations will tend to be discharged, and the indicators return to the normal state.

These two hypotheses are based in part on the psychological theory of the process of therapy, and in part on the findings of Thetford (38), whose study showed that when individuals were frustrated, the physiological reactions to frustration subsided more rapidly in those subjects who had group therapy. The findings from this part of the study will, of course, be related to the findings under hypothesis II of the Cross-Sectional[†] Investigation.

V. In those segments of the recorded interviews which are independently judged, on a psychological basis, to be XXXXXXXXXX C

C

[REDACTED]

there will be found to be significantly greater physiological changes than in other segments of the same interview.

C

Since these moments include feelings of anxiety and fear at being "new" and changed, and at the same time feelings of intense satisfaction in the process of change, the physiological reactions will doubtless be complex, and will require much exploratory study.

C

VI. In peak [REDACTED] in therapy the physiological indices of emotional response will precede the verbal statement of, or description of, that feeling.

C

VII. The physiological reactions of the therapist, during the therapeutic interview, will tend to match, in direction but not in degree, the physiological reactions of the client.

This hypothesis is based on the interesting work reported by DiMascio and Boyd (5). It suggests that such characteristics of the therapist's interaction as empathy and acceptance have a physiological as well as a psychological aspect. In the long run it may help to distinguish between relationships which have a therapeutic potential, and those which do not.

VIII. A further direction of inquiry, which cannot at this point be stated as an hypothesis, relates to the neurological events in moments when personality change seems to be occurring. What happens when a previously repressed feeling "bubbles through" into awareness? Could it be that the emotional response has been, up to this point, organized at the hypothalamic level and that it now becomes a function of the cortex as well? This would be in line with the thinking of Papez (29) who points out that ^{through} ~~the~~ emotional responses are certainly possible without cortical participation, the subjective experiencing of an emotion is not possible without such cortical participation. Could it be that in the psychological safety of the therapeutic relationship the barriers to neural communication between the hypothalamic and cortical levels tend to disappear? Could such a neural event be the physiological experience to which clients often refer in such moments? These are relatively naive questions, on which we need expert neurophysiological consultation to determine whether it is possible to formulate any testable hypotheses in this area. It is, however, a direction of inquiry which we hope we may be able to take.

Method

The essential framework of this longitudinal portion of the research is the study, over time, of the individual case, through continuous recording of data, and through repeated measurements taken at intervals of time.

Clients or patients will be utilized for the study who are willing to participate in the research, understanding that the measurements taken have value for the advancement of science, but will not affect their own therapy one way or another. (Previous experience indicates that it will be entirely possible to obtain such subjects, particularly where the client with little in the way of financial resources realizes that this is an avenue by which he can "pay his way", and obtain the benefits of working with an experienced therapist, at no cash cost to himself.)

Using a behavior polygraph modified for the purposes of this study, the aim would be to obtain a continuous recording of as many of the previously mentioned physiological variables as proved to be feasible without seriously interfering with the therapeutic relationship.

On the psychological side a studio-quality tape recording of the interview will be made, which will provide the basis for continuous measures of such variables as: stage of process in therapy; remoteness vs. immediacy of experiencing of feeling; degree of self-involvement in expression of feeling; quality of the therapeutic relationship
~~_____~~
~~_____~~ current attitudes toward self; feeling expressed in voice tone; feeling expressed in words.

C

In addition to these continuing measures there might be some physiological measures taken at intervals, probably before and after each interview, based on bio-chemical analysis of urine and blood samples.

On the psychological side additional measures would be taken at intervals, such as a Q-sort of the self and the ideal self, a Q-sort for the qualities of the actual relationship and the ideal relationship, and a description of moments experienced as significant in each interview, obtained separately from client and therapist. The methods for this portion of the study would be drawn from previous research in psychotherapy as carried on by the Counseling Center of the University of Chicago (33) and by other investigators (27).

A Gradual Approach

In a study involving so many technical complexities of instrumentation, it would not be the aim to begin on a grand scale. It is planned that both the cross-sectional and longitudinal aspects will begin with limited pilot studies, and be expanded as experience dictates. In the longitudinal study some of the proposed measures will initially be obtained from the client alone. Based on this experience, further measures would be added (and some might be eliminated). Gradually the study will be extended to obtain the same measures from the therapist.

Analysis of Data

The data from the physiological and psychological measures in both aspects of the study would be prepared in such form that they could be used in two ways. The data would be used directly to test

the specific hypotheses which have been stated (or others which might be developed). It would also be analyzed by factor analysis to discover the inherent order in the data, and thus to generate new hypotheses for future testing. In the longitudinal portion of the study the adaptation of factor analysis would be the P technique as used by Luborsky (20) or the still more recent method of Successive Sets Analysis being developed by J. M. Butler.

Significance

This is a basic program of study of the relationship of psychological to physiological variables in various personality states, and in the process of personality change. There is no immediate or obvious application of its findings , but this by no means implies a lack of significance in its findings.

There has been a growing interest in studying the whole person in interaction with his environment, recognizing that such studies will supplement and may even to some extent supplant the highly segmented investigations of human behavior which have been so common. The program which is proposed aims at the core of the interaction of the whole man with his environment, by aiming at the dynamic and motivational aspect of that interaction, the feelings and emotions.

The cross-sectional aspect of the program should throw light on the basic nature of psychopathology and maladjustment. It holds promise of illuminating such concepts as repression and maladaptive functioning in new terms which involve both psyche and soma. It could lead to more fundamental ways of differentiating between normal and pathological states, and between different types of pathologies.

The longitudinal portion of the program will extend still further our knowledge of the process by which personality, attitudes, and behavior may change in fundamental ways. Previous research in psychotherapy -- in which we have had some part -- has been largely psychological in nature. Now it is proposed in this study to heighten the magnifying power of the microscope, as it were, to obtain much more complete and complex data about the process of personality change. We propose to do so by aiming a comprehensive inter-disciplinary investigation at the whole person -- physiological and psychological -- during those moments when significant change appears to be occurring. If there are any positive discoveries at all, they should, in the long run, have significant implications for psychotherapy, education, training of leaders, training of scientists, and any field in which alteration of personality and behavior is a part of the goal. Such discoveries seem certain to have meaning in a world where the increasing rapidity of the rate of acquisition of knowledge, and of technological and cultural change, imply that man's continuing existence on this planet will depend primarily on his ability to change and adapt.

Facilities and Setting

B [REDACTED] provides a particularly good setting for such research. It has an enviable reputation for ease of inter-departmental cooperation. It has competent workers in closely allied fields related to this study: Dr. [REDACTED] has carried on research in [REDACTED] Dr. [REDACTED] Dr. [REDACTED] and Dr. [REDACTED] psychologists, have worked along lines of [REDACTED] [REDACTED] Dr. [REDACTED]

B4
C

B_a [redacted] in medicine, is experienced in [redacted]
research; Dr. [redacted] would be available for consultation on
[redacted] problems; the department of biochemistry is avail-
able for consultation regarding biochemical assays which may be attempted;
C and Dr. [redacted] is available for consultative help in the field
of [redacted].

Space is a more difficult problem but there seems to be rea-
sonable assurance that a projected extension of space for the Depart-
ment of Psychiatry will provide adequate research space.

Comments on Budget

The program will undoubtedly continue for several years but it is unrealistic at this point to try to project the budget beyond the autumn of 1959.

The success of the venture will undoubtedly rest upon obtaining the help of one or preferably two men trained in the psychological field, in the field of electronic instrumentation and in the field of mechanical data analysis. We have an agreement with one such man and have hopes of finding another.

The travel item is to permit one or more of the investigators to visit projects in other centers involving similar instrumentation.

The urgent need is for funds for the preliminary nine month period. We believe that on the basis of that experience we could approach [REDACTED] or some similar organization for sizeable continuing support.

PROPOSED RESEARCH PROGRAM

in

Principal Investigators

[REDACTED] Ph.D., Professor, Departments of Psychology and
Psychiatry, [REDACTED]

[REDACTED] M.D., Assoc. Professor and Chairman, Department
of Psychiatry, [REDACTED]

[REDACTED] Ph.D., Ass't Professor, Clinical Psychology,
Department of Psychiatry [REDACTED]

Purpose

This program will undertake a coordinated investigation of the relationship between the psychological expression of feelings and emotions on the one hand, and their biological and physiological expression on the other. To put it another way, it is to correlate the conscious, verbal, symbolic expression of feelings with those modes of discharging feeling of which the individual is unaware -- the various physiological responses which occur in the organism.

The investigation will be carried out across individuals and groups to determine the relationship between the psychological and physiological expression of feelings in differing pathological and normal groups. It will be carried out longitudinally on individuals in psychotherapy to determine whether the relationship between the psychological and physiological expression of feelings changes during a period of change in personality and behavior.

There are also a number of studies which have made continuous recordings of physiological changes during therapeutic or other significant interviews. Jasswell (17) was one of the first to study the relationship between verbal expression in an interview and physiological indices of emotion. Some of the more recent work has been done by Mowrer and associates (27) measuring palmar sweating; by DiMascio and Boyd (5), measuring heart rate and heart lability; by Anderson (2), taking a continuous EKG during the sessions; by Shagass and Malmo (35), who have been particularly interested in action potentials in the muscular system; by Margolin (23), who has studied the behavior of the stomach; and by a group at Michael Reese Hospital, Chicago, studying heart action before, during and after a stress interview.

The studies mentioned (and these are by no means all) indicate that the relationship between psychological and physiological expression of feelings has already been subjected to considerable scrutiny. It is our belief, however, that most of the work to date has suffered from a lack of clearly defined hypotheses derived from an intimate knowledge of emotional processes as revealed in the process of psychotherapy. The hypotheses to be tested here are derived primarily from observation of persons undergoing the process of change in psychotherapy.

 C
It is believed that this more rigorous theoretical base will enable us to pursue more precise and significant hypotheses. The methods for investigating

these hypotheses involve two separate but complementary approaches, one cross-sectional, one longitudinal or process in nature.

The Cross-Sectional Investigation

This may be thought of usefully as the static approach. It consists of examining the relationship between physiological and psychological variables in a number of subjects suffering from a range of emotional pathology and comparing them with subjects drawn from a "normal" population. The family of hypotheses contained within this phase of the research will be closely inter-related. These hypotheses reflect selected facets of ongoing normal and pathological behavior; it is hoped by this means to contribute further to an operational definition of the psychosomatic parameters of organismic behavior.

Representative Hypotheses

I. The discrepancy between verbal report and measured physiological response to a given stimulus will be greater in a psychiatric than in a normal population.

This hypothesis is derived both from personality theory and from the common clinical observation that patients have difficulty in reporting the character and degree of their inner experience. For example, the apparent emotional unresponsivity of the schizophrenic patient is known to mask a profound experience of inner turmoil. Some support for this hypothesis is evident in the work of Jones (16) on differential patterns of psychogalvanic skin response in children.

II. The duration of physiological response to a given affective stimulus will be greater in a psychiatric population than in normals.

Clinically we observe repeatedly the difficulty which the emotionally ill have in discharging their emotions. Indeed, maladjustment has been defined in part as the inappropriate persistence of emotion. Partial confirmation of this hypothesis is found in the work of Malmö et al (22), who found that in psychoneurotic subjects elevation of blood pressure persisted longer than in normals when subjected to an affective stimulus.

III. The reaction-time to an emotional stimulus will be greater in a psychiatric population than in a normal one.

Again, we observe clinically that the emotionally ill appear to struggle with the meaning of a stimulus and that this process takes time. This hypothesis, too, has been partially confirmed in the work of Smith (36) and in the work of Malmö, previously cited.

IV. The amplitude of physiological responses to a given stimulus will be greater in a psychiatric population composed of behaviorally constricted persons than in normals.

The reasoning here is that, if emotion cannot be fully discharged externally, it will tend to be discharged internally. The peptic ulcer personality would seem to be a clinical instance lending support to such a hypothesis. Jones' (16) work tends to support this hypothesis also.

V. The amplitude of physiological responses to a given stimulus will tend to be less in a psychiatric population composed of "acting-out" persons than in normals.

The reasoning here is the converse of the foregoing -- that the

more emotion is behaviorally discharged, the less it will be manifest internally in the organism. Again, some of Jones' work suggests such a difference.

VI. Symbolization (the ability verbally to define one's feelings) of physiological change will be less accurate in a psychiatric population than in a normal one.

This hypothesis is partly a clinical hunch and partly grows out of our personality theory. It is based on the observation that accurate symbolization seems crucially dependent on full awareness and that degrees of unawareness characterize maladjustment and psychiatric illness.

VII. The variability of symbolization in the psychiatric population will be greater than in normals.

This hypothesis is predicated on the expectation that, if normals report accurately, the range will be narrow while a psychiatric population might be expected to err in many directions as a function of differential ways of handling feelings. For example, we observe that obsessives symbolize their experience differently from hysterics, etc.

VIII. A normal population will more accurately identify feelings in others than will a psychiatric population.

Many workers, among them Fey (7) and Stock (37) have demonstrated previously that there is a close relationship between perception of self and perception of others. This hypothesis then seeks to confirm and extend previous work but, in this instance, with the specific focus the perception of feelings in others.

IX. The ability or inability to recall emotional stimuli will be correlated with differential patterns of physiological response to the stimuli which are remembered, on the one hand, and forgotten, on the other.

Iflund (15) has demonstrated that stimulus material is differentially recalled as a function of the meanings which such stimuli have for the perceiver. The present hypothesis extends this finding with the expectation that stimuli which will subsequently be forgotten will elicit a different physiological response than will those stimuli which will subsequently be recalled. Framed in clinical terms, the testing of this hypothesis attempts to demonstrate some of the physiological concomitants of repression.

Method

Samples from normal and psychiatric populations will serve as the control and experimental groups for this cross-sectional study. Both groups will be exposed to standardized stimulus material selected for its emotion-inducing value.

Using a behavior polygraph modified for the purpose of this study, the aim would be to obtain continuous recordings of as many of the following physiological variables as proves to be feasible without seriously interfering with the subjects' functioning in the experimental situation: heart rate, heart rate variability; blood pressure -- systolic and diastolic; blood flow; skin temperature; breathing rate, and depth of breathing; action potentials of muscles; galvanic skin reflex; electroencephalogram; tear duct activity. In addition, blood samples

may later be used for such biochemical determinations as serum cholesterol level, epinephrine and nor-epinephrine levels, eosinophile counts. These recordings will make it possible to define the character of the physiological responses as well as their duration and amplitude.

While these physiological recordings are being made the verbal symbolized expression of the subject's emotional experience will be recorded on a studio-quality tape recorder. The verbal productions can then be analyzed and categorized in terms which will permit definition of the accuracy and variability of symbolization. This portion of the design will test Hypotheses I through VIII. Subsequently, the subjects will be asked to attempt to recall the stimuli which have been presented. This aspect of the design will test Hypothesis IX.

The Longitudinal Investigation of
the Process of Change

Since this second aspect of the program is in considerable degree exploratory, it is not now possible to formulate all of the hypotheses to be investigated. Some of the initial hypotheses can however, be spelled out. They are stated here in general form for more ready communication, but will be translated into operational hypotheses in terms of the methods described later in this statement.

I. In the initial stages of the process of psychotherapy, physiological changes indicative of an organismic emotional response will frequently occur in conjunction with verbal statements which are not expressive of emotion.

The rationale here is that feelings which are denied to awareness, or which are unacceptable to the client, will occur at the

physiological level, but cannot be given direct verbal expression.

II. In the later stages of the process of psychotherapy, physiological changes indicative of emotional response will tend to be accompanied by direct verbal expression of an equivalent degree of emotional response.

The rationale is that as the individual can admit his experiences in awareness, and feel acceptingly toward them, his verbal expression, in a safe therapeutic relationship, will come to match his organismic state.

III. In the condition specified under I (where verbal expression is not congruent with physiological reaction) the physiological deviation from the normal will tend to persist.

IV. In the condition specified under II (where there is, generally speaking, a congruence between verbal expression and physiological reaction) the physiological deviations will tend to be discharged, and the indicators return to the normal state.

These two hypotheses are based in part on the psychological theory of the process of therapy, and in part on the findings of Thorndike (38), whose study showed that when individuals were frustrated, the physiological reactions to frustration subsided more rapidly in those subjects who had group therapy. The findings from this part of the study will, of course, be related to the findings under hypothesis II of the Cross-Sectional Investigation.

V. In those segments of the recorded interviews which are independently judged, on a psychological basis, to be [REDACTED] c

C [REDACTED]
there will be found to be significantly greater physiological changes than in other segments of the same interview.

C
Since these moments include feelings of anxiety and fear at being "new" and changed, and at the same time feelings of intense satisfaction in the process of change, the physiological reactions will doubtless be complex, and will require much exploratory study.

C VI. In peak [REDACTED] in therapy the physiological indices of emotional response will precede the verbal statement of, or description of, that feeling.

C
VII. The physiological reactions of the therapist, during the therapeutic interview, will tend to match, in direction but not in degree, the physiological reactions of the client.

This hypothesis is based on the interesting work reported by DiMascio and Boyd (5). It suggests that such characteristics of the therapist's interaction as empathy and acceptance have a physiological as well as a psychological aspect. In the long run it may help to distinguish between relationships which have a therapeutic potential, and those which do not.

VIII. A further direction of inquiry, which cannot at this point be stated as an hypothesis, relates to the neurological events in moments when personality change seems to be occurring. What happens when a previously repressed feeling "bubbles through" into awareness? Could it be that the emotional response has been, up to this point, organized at the hypothalamic level and that it now becomes a function of the cortex as well? This would be in line with the thinking of Papez (29) who points out that ^{through} the emotional responses are certainly possible without cortical participation, the subjective experiencing of an emotion is not possible without such cortical participation. Could it be that in the psychological safety of the therapeutic relationship the barriers to neural communication between the hypothalamic and cortical levels tend to disappear? Could such a neural event be the physiological experience to which clients often refer in such moments? These are relatively naive questions, on which we need expert neurophysiological consultation to determine whether it is possible to formulate any testable hypotheses in this area. It is, however, a direction of inquiry which we hope we may be able to take.

Method

The essential framework of this longitudinal portion of the research is the study, over time, of the individual case, through continuous recording of data, and through repeated measurements taken at intervals of time.

Clients or patients will be utilized for the study who are willing to participate in the research, understanding that the measurements taken have value for the advancement of science, but will not affect their own therapy one way or another. (Previous experience indicates that it will be entirely possible to obtain such subjects, particularly where the client with little in the way of financial resources realizes that this is an avenue by which he can "pay his way", and obtain the benefits of working with an experienced therapist, at no cash cost to himself.)

Using a behavior polygraph modified for the purposes of this study, the aim would be to obtain a continuous recording of as many of the previously mentioned physiological variables as proved to be feasible without seriously interfering with the therapeutic relationship.

On the psychological side a studio-quality tape recording of the interview will be made, which will provide the basis for continuous measures of such variables as: stage of process in therapy; remoteness vs. immediacy of experiencing of feeling; degree of self-involvement in expression of feeling; quality of the therapeutic relationship

~~_____~~

~~_____~~ current attitudes toward self; feeling expressed in voice tone; feeling expressed in words.

In addition to these continuing measures there might be some physiological measures taken at intervals, probably before and after each interview, based on bio-chemical analysis of urine and blood samples.

On the psychological side additional measures would be taken at intervals, such as a Q-sort of the self and the ideal self, a Q-sort for the qualities of the actual relationship and the ideal relationship, and a description of moments experienced as significant in each interview, obtained separately from client and therapist. The methods for this portion of the study would be drawn from previous research in psychotherapy as carried on by the Counseling Center of the University of Chicago (33) and by other investigators (27).

A Gradual Approach

In a study involving so many technical complexities of instrumentation, it would not be the aim to begin on a grand scale. It is planned that both the cross-sectional and longitudinal aspects will begin with limited pilot studies, and be expanded as experience dictates. In the longitudinal study some of the proposed measures will initially be obtained from the client alone. Based on this experience, further measures would be added (and some might be eliminated). Gradually the study will be extended to obtain the same measures from the therapist.

Analysis of Data

The data from the physiological and psychological measures in both aspects of the study would be prepared in such form that they could be used in two ways. The data would be used directly to test

the specific hypotheses which have been stated (or others which might be developed). It would also be analyzed by factor analysis to discover the inherent order in the data, and thus to generate new hypotheses for future testing. In the longitudinal portion of the study the adaptation^{at} of factor analysis would be the P technique as used by Luborsky (20) or the still more recent method of Successive Sets Analysis being developed by J. M. Butler.

Significance

This is a basic program of study of the relationship of psychological to physiological variables in various personality states, and in the process of personality change. There is no immediate or obvious application of its findings, but this by no means implies a lack of significance in its findings.

There has been a growing interest in studying the whole person in interaction with his environment, recognizing that such studies will supplement and may even to some extent supplant the highly segmented investigations of human behavior which have been so common. The program which is proposed aims at the core of the interaction of the whole man with his environment, by aiming at the dynamic and motivational aspect of that interaction, the feelings and emotions.

The cross-sectional aspect of the program should throw light on the basic nature of psychopathology and maladjustment. It holds promise of illuminating such concepts as repression and maladaptive functioning in new terms which involve both psyche and soma. It could lead to more fundamental ways of differentiating between normal and pathological states, and between different types of pathologies.

The longitudinal portion of the program will extend still further our knowledge of the process by which personality, attitudes, and behavior may change in fundamental ways. Previous research in psychotherapy -- in which we have had some part -- has been largely psychological in nature. Now it is proposed in this study to heighten the magnifying power of the microscope, as it were, to obtain much more complete and complex data about the process of personality change. We propose to do so by aiming a comprehensive inter-disciplinary investigation at the whole person -- physiological and psychological -- during those moments when significant change appears to be occurring. If there are any positive discoveries at all, they should, in the long run, have significant implications for psychotherapy, education, training of leaders, training of scientists, and any field in which alteration of personality and behavior is a part of the goal. Such discoveries seem certain to have meaning in a world where the increasing rapidity of the rate of acquisition of knowledge, and of technological and cultural change, imply that man's continuing existence on this planet will depend primarily on his ability to change and adapt.

Facilities and Setting

B [REDACTED] provides a particularly good setting for such research. It has an enviable reputation for ease of inter-departmental cooperation. It has competent workers in closely allied fields related to this study: Dr. [REDACTED] has carried on research in [REDACTED]. Dr. [REDACTED] Dr. [REDACTED] and Dr. [REDACTED] psychologists, have worked along lines of [REDACTED].

C [REDACTED] Dr. [REDACTED]

[redacted] in medicine, is experienced in [redacted] research; Dr. [redacted] would be available for consultation on [redacted] problems; the department of biochemistry is available for consultation regarding biochemical assays which may be attempted; and Dr. [redacted] is available for consultative help in the field of [redacted].

B

v

C

Space is a more difficult problem but there seems to be reasonable assurance that a projected extension of space for the Department of Psychiatry will provide adequate research space.

C → [redacted] Treasurer

B → [redacted]

Dear [redacted]

I have spent several hours searching my files for the budget which I submitted and for records of actual expenditures during my 1959-1960 investigation [redacted]. Thus far I have found neither, though I feel certain I brought them back from [redacted]. I shall continue the search if you require a detailed statement of expenditures, but I am not certain what you wish by way of an accounting.

f TC

The initial grant, as I recall, was for \$6000.00. The bulk of this was used in lieu of half my regular salary at the University. The remainder was budgeted for personal assistance, travel, and a tape recorder for verbatim interview recording. Assistance money was used for having questionnaires typed and mimeographed. Travel money was for my fare to and from [redacted] and for traveling to villages where the questionnaires and interviews were administered. In the spring of 1960, an additional sum (about \$400) was provided for special assistance in gathering additional data. This was used to have information copied from the records of the [redacted] and from marriage and divorce records.

TRC }

In short, I adhered to the submitted budget as closely as possible, although I ultimately was forced to use my own money for some expenses which exceeded my expectations, especially local travel.

If the above statement is inadequate, let me know and I shall make another effort to locate my records.

I have examined and approved the submitted expenditures.

Sincerely yours,

MEMORANDUM FOR THE RECORD

SUBJECT: [REDACTED] Proposal

B, C
C
B, C
B
C
B

1. At the research meeting of 12/8/60, a decision was made to accept the recommendation of [REDACTED] that the [REDACTED] project be approved for an expenditure of \$1,500 over a three-year period for the support of the [REDACTED] through 1963. This will be funded through Cover Grants.

2. It was suggested that [REDACTED] be apprised of the fact that we find considerable value to the existence of the [REDACTED] and that, should it develop that support from other sources is not forthcoming over the next three-year period, we reconsider the level of funding.

SIDNEY GOTTLIEB

Memorandum to: Sid

B, C, f Subject: Project Proposal - Dr. [REDACTED]

B, C, f Attached is a letter application from Dr. [REDACTED] requesting support
B in the amount of \$8,390.56 for continuation of the [REDACTED], which we
founded, through 1963.

B, C, f We feel that the [REDACTED] has been successful in providing us
appropriate publicity in the scientific community, in discovering new [REDACTED]
B, f scientists throughout the world, and in gaining access to the [REDACTED]

B, f [REDACTED] However, we have expended \$13,800 in establishing the
[REDACTED] and feel that other sources of funding should be developed. Con-
sequently, we recommend that a grant of \$4,500 be made for support of the
C, f project through 1963. In the process of making the grant, we will encourage
[REDACTED] to supplement the grant from other sources.

C [REDACTED]

November 9th, 1960.

Mr. [REDACTED]

Dear [REDACTED]

Thanks to the generous support by your [REDACTED] now approaches our [REDACTED] issue. The purpose of this letter is to ask you for continued support, though at a reduced scale.

As you may remember, our efforts in the field of [REDACTED] date back to 1955. It was then that, as a joint undertaking of the [REDACTED] and I mailed a number of questionnaires concerning the prevalence and nature of [REDACTED] to a number of [REDACTED]

The nature of the response was such as to assure lively interest in collaborative research, [REDACTED] communication, exchanges of ideas and discussions of problems. Based on the replies to our questionnaire, our first [REDACTED] was prepared; it appeared in [REDACTED]

Beginning modestly with [REDACTED] pages, sent to [REDACTED] correspondents, the [REDACTED] quickly blossomed out until by now there are [REDACTED] pages per copy and well over [REDACTED] correspondents in [REDACTED]. No-hundred have contributed at least once, from [REDACTED] over [REDACTED]. The contents of each issue includes not only research and general observations, but theoretical considerations and critiques as well. The growth is further reflected in the increasing number of paying subscribers, which now stands at [REDACTED]. Many interested subscribers and valuable contributors are unable to pay the modest subscription fee owing to [REDACTED]

Washington, 1963.

b, f Early in our efforts it occurred to us that the network of correspondents which has been established might be used as a research instrument. Accordingly, [redacted] presents a cross-cultural survey of [redacted] based on the replies to a questionnaire sent to our correspondents for this specific purpose. The results obtained encourage continuation of surveys of this kind.

b, f Feeling thus that the [redacted] has firmly established itself as a useful means of [redacted] I wish to apply for continuation of [redacted] on a more permanent basis. Following is an itemized account of expected income and expenditure for the years 1961-1962-1963.

1961 BUDGETExpected Income

b, f	Grant from [redacted]	\$1,500.00
	minus [redacted]	1,500.00
		\$1,455.00
b, f	Funds remaining from 1960 after [redacted] expenses have been subtracted.	
C	[redacted] plus Subscriptions)	1,624.44
b, f	Estimated income from Subscriptions for 1961 (subscriptions have been raised to [redacted] for students [redacted])	1,000.00
	Total:	\$ 4,279.44

Estimated Expenditures

b, f	Two [redacted] at approx. \$1,000.00 each (1200 copies)	\$ 2,000.00
C, f	Editorial Salaries: [redacted]	1,000.00
	[redacted]	1,000.00
	Secretarial Salary	1,560.00
	Miscellaneous (filing cabinet, personalized stationery, translation fees, books, etc.)	300.00
	Total:	5,860.00
	minus Expected Income	4,279.44

Still Needed \$ 1,580.56

April 14, 1960

A Memorandum to [REDACTED]

Subject: [REDACTED]

Continuation of support for the [REDACTED] task
[REDACTED] is requested. Justification for the support follows:

B, f

1. The [REDACTED] has kept the [REDACTED] informed in the rapidly developing field of [REDACTED]. In many of the so called [REDACTED] the [REDACTED] has maintained contact with scientists who are observing and measuring the impact of [REDACTED] values and technology. This could prove to be of value in planning [REDACTED] activities in some of these areas.

g

B, C, f

2. The [REDACTED] has publicized the [REDACTED]
3. The [REDACTED] fulfills one of the charter purposes of the [REDACTED] - the dissemination of knowledge and research findings in [REDACTED]

B, f

4. The [REDACTED] represents potentially valuable contacts in the [REDACTED] it now reaches.

B, C, f

5. The services of Dr. [REDACTED] and Dr. [REDACTED] are obtained as consultants without additional payment.

Attached are an accounting for funds expended from September 1957 through February 1960 and a proposed budget for 1960.

C

C
B [REDACTED]

C Dear [REDACTED]

B, f { Thank you very much for your letter of November 23rd and the enclosed check of \$750. (which incidentally disagrees with your letter which reads \$725.; however if you don't mind we could carry over the extra \$25. for the next [REDACTED]) as [REDACTED] will confirm the [REDACTED] now in press is superior in quality to its predecessors. Interesting material continues to be sent to us; there is already enough for [REDACTED]

B, f { I would indeed be grateful to you for having an opportunity to discuss with you longer range planning and wonder in this connection whether you could spare some time on Saturday, December 5th at lunch time. I have to attend a meeting of the [REDACTED] in [REDACTED] in the morning and will leave for [REDACTED] at 4 p.m.

B, f { One of us intends to attend the [REDACTED] conference in [REDACTED] but [REDACTED] permitting I shall speak in [REDACTED] in January, and in September as you know I shall be in [REDACTED]

I greatly appreciate your friendly comments on my [REDACTED] paper. Since its completion I have received so much material from various [REDACTED] that I would be indeed in a position to prepare a much fuller version.

Yours sincerely,

C, f [REDACTED]

74-269

November 23, 1959

C, f
B
[REDACTED]

C Dear [REDACTED]

I am sorry that I didn't get to visit you with [REDACTED] because there is a great deal that we need to talk over. I owe you a vote of thanks for some of the people you suggested that I meet in [REDACTED] particularly [REDACTED]

C, B, f
[REDACTED]

C

I appreciated, too, the chance to read your paper which you are preparing for [REDACTED] next year. The one comment I would have is that the requirement of the title placed on you to cover is for such a vast area in such a short time. I think you ought to consider doing a book on the subject if you ever have the opportunity.

B, f
C

Lastly, in response to your letter of the 16th, enclosed is our check for \$725.00 which appears to be adequate for Newsletter #7. Perhaps we should try to get together in early 1960 to discuss longer range planning, but, at this point, I am reluctant to try to set a date for another visit to [REDACTED]. I seem to be more fatigued from travel now than any time in the last year, and there really are more places that I should be going than any period since I have been with the [REDACTED]

B, f

Are any of your people attending the [REDACTED] conference in [REDACTED] in late December?

Best regards,

Sincerely yours,

C [REDACTED]

Enc. 1 and check

B, f

C, B, f

November 18th, 1959.

C, B
[Redacted]

C Dear [Redacted]

C, f
B, f
[Redacted] Further to my conversation with Mr. [Redacted] on November 12th in [Redacted], I am approaching you for additional funds to cover [Redacted] due to be published in January.

C
O, f
B, f
Last day we received a grant of \$600 from your [Redacted]. This amount, plus \$227.13 left from the previous [Redacted] have us a total of \$827.13. The actual expenses involved in the production of [Redacted] (see below) came to slightly more than this total, the balance having to be paid through other sources.

List of Expenses

Printing: 1000 copies - 81 pp.	\$ 535.00
Covers: 1000 copies printed-	
Binding 919 copies	\$ 15.00
Gathering of pages	\$ 41.00
Checking: 1000 copies	\$ 30.00
Postage	\$ 133.00
f 100 [Redacted] masters	\$ 10.60
f 1000 [Redacted] envelopes	\$ 17.00
Total	\$ 894.00

I have examined and approved the submitted expenditures.

A
Chief
TSS/Chemical Division
Date: 5 February 1960

Therefore, all of the original amount has been spent. The other available financial source, our [Redacted] subscriptions fund, contains \$230.00 at present, which is the total amount of money available at present.

B

74-270

B, f

[REDACTED]

B f

As [REDACTED] will be similar in form, number of pages, and number of copies to be printed, I should like to submit the following budget, based on the expenses of [REDACTED] but with two minor changes. The increased amount for postage is to cover the increased number of subscribers to whom we wish to send the [REDACTED] by air mail. The increased amount for gathering of pages is due to the fact that the job will be done this time by machine at the printer's instead of manually, thus cutting out the necessity for checking. Although the final item, an additional request for money towards the purchase of an Oxford dictionary, does not deal specifically with [REDACTED] we feel that it would be most useful in the editing of future [REDACTED] regarding the consistency in spelling and grammar.

Proposed Budget

Printing: 1000 copies - 81 pp.	\$ 535.00
Covers: 1000 copies printed	
Binding of completed Newsletters	\$ 155.00
Gathering of pages	\$ 60.00
Postage	\$ 150.00
100 [REDACTED] masters	\$ 10.60
1000 [REDACTED]	\$ 17.00
1 Oxford Standard Dictionary	\$ 25.00
	<hr/>
	\$ 952.60

B, f

Subtracting from the above total the 230.00 presently available, \$722.60 is still required for the production and distribution of [REDACTED]

B, f

Hoping that our request meets with your approval, I remain,

I have examined and approved the submitted expenditures.

Yours sincerely,

A

C, F [redacted]
B, f [redacted]

C, f Dear [redacted]

Thank you for your wonderful hospitality on our visit; I am sorry we didn't have longer for discussion. Thank you also for your accounting. I am taking steps now to transmit \$600.00 to you for the production of [redacted] and request that you consider whether an equal amount will be adequate for the production of the [redacted]. This we can take up at a later date, but I wanted to raise the consideration.

Cc
Bc
I had a very interesting meeting with [redacted] and [redacted]. We concluded our conversations with the suggestion that [redacted] prepare an integrated proposal on research among the [redacted] to be submitted through you to the [redacted], the support for which would be arranged by the [redacted] after the initial period. [redacted] was quite emphatic that he could assure support if the work can be gotten underway. I can only congratulate you for your good fortune in having [redacted] interest and support; he is a man of breadth and experience.

C I have suggested that [redacted] delay his trip somewhat, but you will be hearing from him directly.

C, B, F [redacted] is very much interested in receiving future [redacted]. I am sure he will be writing to you and transmitting the subscription fee of \$1.00, but in the interim I am enclosing his address: [redacted]

C

Best regards,

Sincerely yours,

C [redacted]

C [redacted]

BF

[REDACTED]

April 21, 1959.

C
B

C

BF

Further to our conversation of April 16 in [REDACTED] and in accordance with our correspondence of last December, 1958, I am approaching you for additional funds to cover [REDACTED] due to be published in June.

We are able to carry over some money from the present grant which you have given us. Of the funds allotted for the publication of [REDACTED] (irrespective of salaries), the following amounts have been spent:

	Spent	Allotted
Production Costs	\$372.87	(\$400.00)
Mailing Costs	125.00	(150.00)
Translation of articles and correspondence in unusual languages	000.00	(100.00)
Filing Cabinet	000.00	(75.00)
TOTAL	\$497.87	(\$725.00)

Therefore, \$227.13 of the original amount is left. I might add that 150 additional copies of [REDACTED] are being printed up at no cost to your foundation, as I shall be paying the expenses.

The other available financial source is our [REDACTED] Subscriptions fund. \$218.92 in subscription fees has been received altogether. Of this amount, \$123.76 has been spent on overtime salaries and general office supplies, leaving \$95.16 at our disposal. Thus, the total amount of money available at present is \$322.29.

I have examined and approved the submitted expenditures.

A.

Chief

TGS/Chemical Division

Date: 5/2/59

74-275

B.F.

Although [redacted] will be similar in form and number of pages to the previous issue, two changes are being made which will affect its budget (see below). Firstly, 1000 copies of the [redacted] will be printed instead of 800, to meet the demands of a constantly increasing circulation. Secondly, the [redacted] has informed us that it refuses to print any more [redacted] as the job has become too large for the department to handle. Therefore, it will be necessary to engage a commercial organization. For these two reasons, production and distribution costs will be necessarily increased.

PROPOSED BUDGET

Commercial printing (as quoted by one representative company in the area): 1000 copies of [redacted] masters x 6 1/4 pp.	\$520.00
Quality Press; 1000 covers printed 1000 books bound	150.00
Mailing Costs	195.00
TOTAL	\$865.00

Subtracting from the above total the \$322.29 presently available, \$542.71 is still required for the production and distribution of [redacted]

The proposed budget obviously does not cover the [redacted] issue which is in preparation. Questionnaires concerning [redacted] in relation to varying cultures have been sent out to [redacted] all over the world. It is at present, impossible to foretell when sufficient numbers of responses will be available for analysis and when the material will be ready for publication.

Hoping that our request meets with your kind approval, I remain,

Yours sincerely,
C.B.F.

I have examined and approved the submitted expenditures.
