

PROTECT:

Approved For Release 2000/08/08 : CIA-RDP96-00789R000300070001-1

START:

1318

DATE: 8 Jan 87

SANCTUARY: 1325

SESSION: 03

TARGET:

SOURCE: 101

FINISH:

SG1B

COORDINATE: [REDACTED]

FRONTLOAD:

" WE will be returning to the site you visited in our previous two sessions. It is the site of square buildings cylindrical objects near the river. "

NOTES:

- ① No known or stated inclemencies
- ② Flap in morning due to possible candidate for assignment.

DRAFT: \_\_\_\_\_

★ CLUSTER OF structures, set apart, open area around trees in distance. area is green, no snow. clusters separated from other facilities in area. I'm moving around in a circle now. one tall structure, has a partial purpose similar to administration. Not its sole purpose. Tall building. Not old. Not like I thought before. now some cylindrical structures. Green here. low structure. much lower than tall buildings and not as wide. moving around, some concrete. Possibly some rail tracks. moving around, cylindrical pole like, up/down, has arms or protrusions like a rail crossing sign. Road outside. Compound is a good word, maybe a fence to separate it from other areas. newness here. Temperature is pleasant here. Not cold. Air feels a little humid, thick..

→ CYLINDRICAL objects

★ Right side. metallic. Nub-tipped. like a chess-bishop. metallic, they're in color. (SNEEZE) ..... Two here, kind of washed out charcoal (SNEEZE). I don't see the two I called shoke stacks last time. at least two - separated by some distance (SNEEZE). I have a feeling I'm missing something here. There is a large ~~area~~ building here. more cylindrical objects. Something still missing.

→ Something missing. look around for the missing.

★ These three ~~to~~ components, the buildings, the cylinders do not make a whole. There is a rail road track. Perception here that the area is separated by a fence but not real secure.

→ Describe the activity

3

★ I'm going to break it down by area. I'm still surprised by shirtsleeve weather. Large building 1st. A perception that large building is performing but not near 100%. Skeleton crew is not proper word, more like advance party doing minimum to get things started. Red tape. Different types of planning. Planning like an S4 and S3. Where we are going. We still working on site but while working they moved in. Smell of dust. Dry walling, like still plastering.

→ Cylindrical site

★ Large, tall, cylindrical, metallic, I'm seeing two of them but that may be more symbolic than actual, maybe they are to be used in pairs but I can't be sure. They seem bigger at top than middle. Hour glass shape. Tall, several stories.

→ Focus on the interiors

★ I'm inside. looking up, I see a circle. a metallic circle. Round. RAW DATA: cables bad word, wiring better but neither is precise. They are coated, covered in a plastic like sheath covering, Blue, yellow, green, black. mostly yellow. Seem to be set into some kinda stages. Its cramped and crowded. Its standing on its tail like.

→ Focus down

★ makes no sense. RAW DATA: Looking down, Things look... shiny, metallic, its .. being careful.. reflective, maybe transparent. looks like two large metallic mirrors coming together to form upside down tepee, "A" shape. at the base there are movable controls to move the mirrors to exact opposing angles or to reverse upside down "A" to right side. The sides are round and they have been machined - ~~it~~ lives inside like looking inside

4

(continued)

★ a piston. I don't see any accommodations for people. The circular ring on top I mentioned earlier is open. Like something else clamps on later on. Like something would be locked in place. There is the smell of fresh lumber - maybe pine.

→ its now 8 Jan 87. This site is not finished. Move forward to when this site is finished and/or use.

★ I've moved forward but I'm stopping before its finished. Concrete construction going on around building. Trucks in the area. Where I am now, as opposed to earlier, construction is more now, meaning construction will increase. Some hardening going on. Many more construction workers now. Building is being enlarged but I don't think that was planned. Moving towards cylindrical objects a large, windowless building, concrete, flat roof. It has to do with cylindrical objects. I think I saw it before

→ you did

★ moving further a head now to when site is operational. Pleasant evening. a lot of natural growth now removed. Concrete structures now completed. Sloping roofs. Security is more intense. Still not complete but it has improved.

→ cylindrical objects

★ First let me get this out. There is an overall feeling of relief & relaxation but not exact. Like it was important to reach this stage and now its done. Cylindrical objects. Reinforced structures. Inside dark concrete. Lights overhead. Moving around - men in heavy coats. Balmy outside but heavy coats here.

5

(continued)

★ men carrying flashlights. Bad term, large lights. must be held in both hands. Spotlight. ~~the~~ Charlie horse in right leg.

→ Work it out - check mirrors

★ Right, There are a number of metallic objects inside the concrete. Mirrors also maybe only metallic objects. two different kind of cylinders. Big ones have mirrors at bottom.

→ Describe

★ mirrors have something to do with how wide something opens like an aperture.

→ ATTEMPT to perceive concepts that might describe its purpose - (Charlie horse sure bothersome) - sitting up -

★ OK, I'm stage "5"ing purpose now - I'm going to ASK around. Possibly used in pairs. "Transferring" "CYLINDRICAL" "SHUTTLEING" "ORBITING" "CYCLONIC" "PUSHING" "COOLING" "CRUX" "CHAMBERIZING" "DEBILITATING" "DEFUSING" "DELINQUENT" "CROWDED" "DECEPTION" " "

→ ASK NOW how it works

★ "Propulsion" "Directed force maybe directed Rays" "I GET" "CORRELLIS' AFFECT" "Picture of counter clockwise turn" "re-directing/re-focusing" "not necessarily exact but it's all that I can come up with" "Linkage of some kind" "change over" "cross over" "alternating current" "channeling/chambering"

→ LET'S WATCH video of total in use mode. Describe the activity

★ ENTIRE concrete structure moves. cylindrical objects dont

6

★ operate by themselves. shared responsibility, a lot of movement. a lot of people running around.  
 RAW DATA: large, hush, grey cloud, thick smoke, smaller objects like <sup>cylinders</sup> ~~objects~~ inside concrete operate in unisons. Instructions coming from someplace else.

→ ~~the~~ <sup>the</sup> other continue sequence

★ In another location, two large bowls on poles. Very bright violet and strange shade of blue either leaving or being sucked into these bowls at angle of 10 o'clock - I don't know what this has to do with cylindrical objects. It's still night and it's still warm outside.

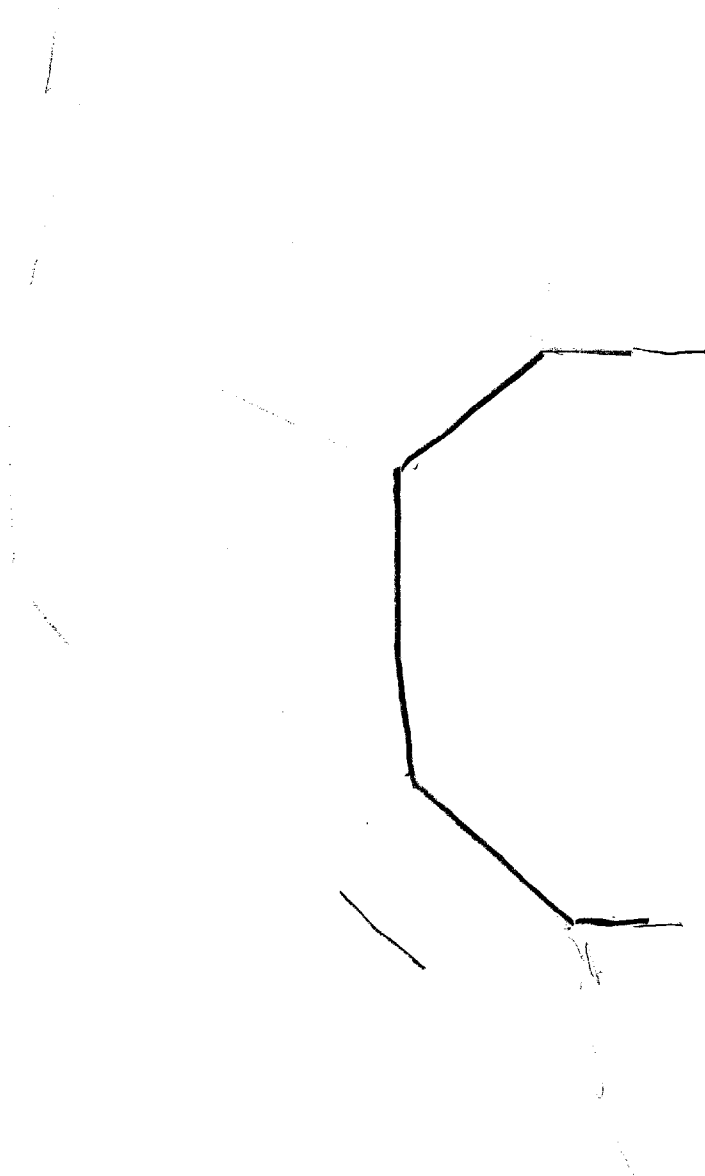

→ The grey cloud

★ Very thick grey cloud, opaque, high. at first I thought there had been an accident. An ugly shade of gray. Watching the cloud. It just keeps getting bigger. I'm still waiting to see what comes out of it. OK... things aren't tying together - I'm outside --  
 Raw data: High saucer shape object. Smoke now dissipating, cloud gone back down, sucked back down. The light is no longer being reflected.

→ smell cloud

★ Acidic, burns nose, like ammonia, not like sulphur, no rotten egg smell. The cloud has thickness like you could almost cut a piece. Sizzling, crackling, static, some kind of electrical component. Electromagnetic is important. Surprisingly the cloud is cool.

pressures lateral and lateral, sides of cylinder are wraparound and coculated. cylinders have something to do with particles coming apart and going together, boundary off.

There is a hot warm pulsating light. There is steam rising and separating, forming a cloud or vapor. There is a humming, a crackling and an ozone smell. The cloud is one under the other, it overlaps. Cloud has light behind it, encircling, swallowing and engulfing.

There is an alternating current, that pulses in controlled bursts in sync.

The event was a successful test of some kind. There were no surprises. Test confirmed what was expected. Test is followed by down-time. Time to recover and re-set-up.
