

The target is an extremely large freighter. There is something odd or unique about the stern. The hull is two tone; a red lower section & light gray upper section. The superstructure is light gray or dirty white, as is the smoke stack. The stack is ~~rather~~ slanted and/or oval in shape. It also has a red bar midway up. The character "30" or "B0" appears somewhere on the vessel. The superstructure ~~may be split fore & aft or~~ is either a split bridge type ~~or a~~ or a fore bridge w/ a large object on deck near the stern. The vessel has two self contained cranes or support/loading systems mid ship. The vessel is rather old.

The vessel is carrying a large quantity of marijuana. The contraband is located in two locations on the ship (see diagram).

There will be an transfer at sea. The contraband will be off loaded via a large side door onto smaller metal hulled vessels. This transfer will occur w/i sight of land and in an area of numerous small islands.

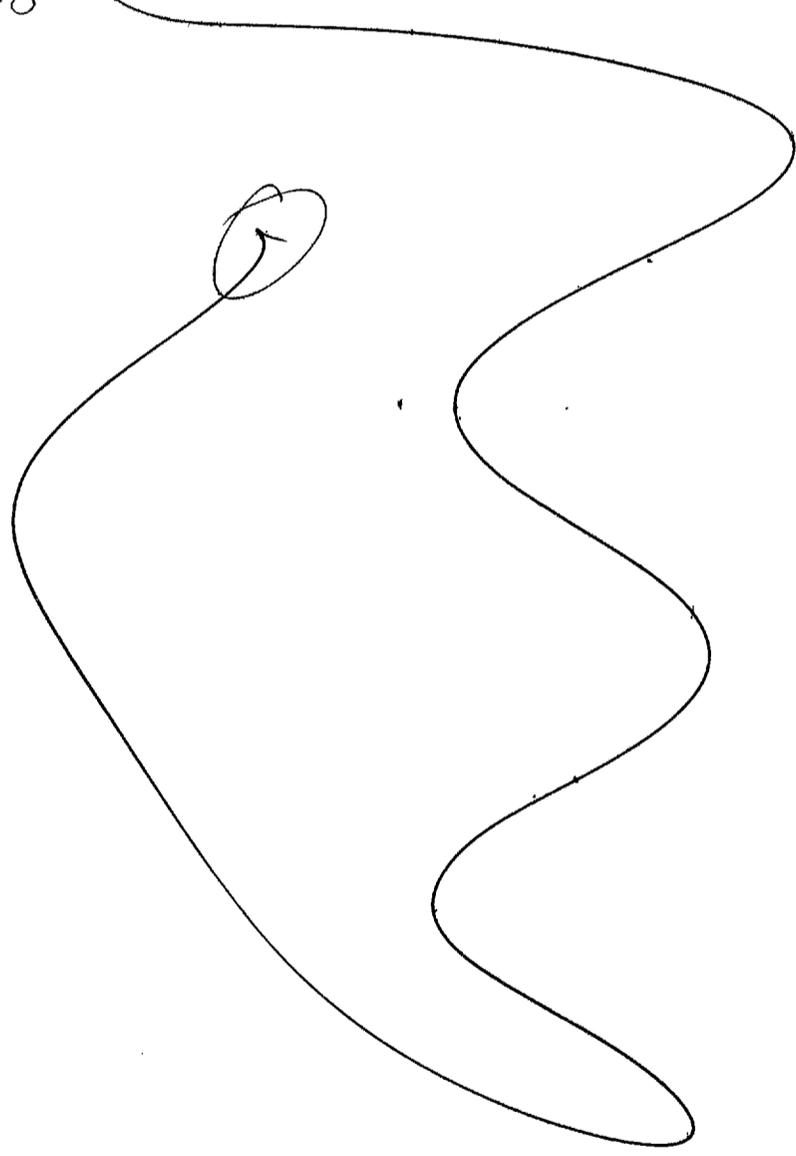

Nearby beaches sand bars are extremely white and of extremely fine grained sand/soil.

This is a very profitable operation. The words/terms associated with this operation are DUTSA DOBSA, SAN DOBOSO, DOBOSO, SANTA DE BASA or DE BASO, and de Muellan.
