

Lyn  
SRV  
Ft Meade  
3 Apr 87

SUBJECT: SRV envelope for the week of 30 MAR 87 - 3 APR 87

SESSION RESULTS: The following impressions were gained from the two sessions worked on for this tasking:

The site is a very large manmade place consisting of one or more very massive structures. The place seems to be all concrete, etc., and seems to be under almost continuing construction. The activity at the site is greatly commercial in nature, but there also seems to be some building going on. Among the "builders", there is the strong impression that they use many old-fashioned tools and/or ways of working.

Inside one of the structures is a small room into which is crowded many large squarish objects. This room gives the impression of being a storage room or "boiler room" type of place. There is one object of special note in this room: It is rounded on top (almost ball-shaped), and the bottom is rounded side-to-side, but straight vertically from about 3/4 of the way down from the top to the floor. It fits flush on the floor, and seems to be built into the room. The room has the feeling that it is definitely not for frequent human usage.

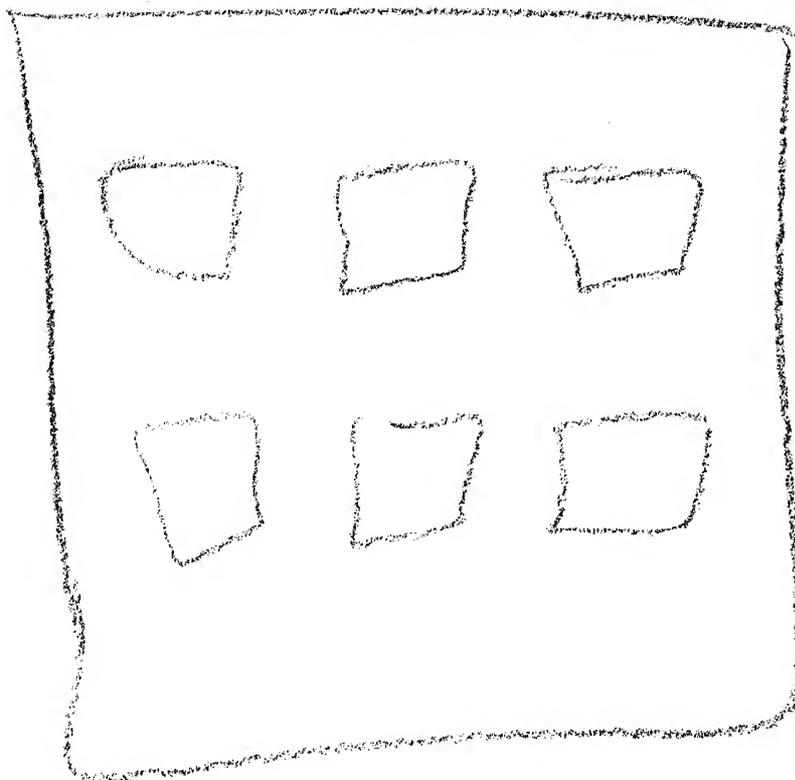

RVER CRITIQUE: I have the feeling that I was possibly locked onto the wrong site. While I believe that these two sessions were valid for A site, I would not feel comfortable depending heavily on this information for the tasking at hand.

red  
brick  
square  
structure

I saw an old red-brick square structure. I felt it was located in an older section of a town or a city.

Structure  
white  
overlap

I saw a big white square  
structure with overlaps on the  
structure.
