Approved For Release 2001/03/07 : CIA-RDP96-00789R003700770005-3

Site involves object that is being evaluated for dependable/applicable/stable application of phenomena involved. Object is not yet "practical ized" - but is being evaluated for possible production + general use.

It is "hooked-up" to monitoring/evaluating equipment which controls conditions applied to object and ~~to~~ controls also what object does, but also keeps people involved in experiment continually aware - "feed-back" - of what is going on with object. Object is high-tech/electronic, utilizes either a known phenomenon in a novel way or an unknown phenomenon (or even a ~~[illegible]~~ known phenomenon in a previously unthought of way).
