6 **SEC. 2. FINDINGS.**

7 The Congress makes the following findings:

8 (1) Individuals with cancer often do not have  
9 access to a cancer care system that provides com-  
10 prehensive and coordinated care of high quality.

11 (2) The cancer care system has not traditionally  
12 offered individuals with cancer a prospective and  
13 comprehensive plan for treatment and symptom  
14 management, strategies for updating and evaluating

1 such plan with the assistance of a health care pro-  
2 fessional, and a follow-up plan for monitoring and  
3 treating possible late effects of cancer and its treat-  
4 ment.

5 (3) Cancer survivors often experience the  
6 under-diagnosis and under-treatment of the symp-  
7 toms of cancer, a problem that begins at the time  
8 of diagnosis and often becomes more severe at the  
9 end of life.

10 (4) Individuals with cancer are sometimes put  
11 in the untenable position of choosing between poten-  
12 tially curative therapies and palliative care instead of  
13 being assured access to comprehensive care that in-  
14 cludes appropriate treatment and symptom manage-  
15 ment.

16 (5) Comprehensive cancer care should incor-  
17 porate access to psychosocial services and manage-  
18 ment of the symptoms of cancer (and the symptoms  
19 of its treatment), including pain, nausea and vom-  
20 iting, fatigue, and depression.

21 (6) Comprehensive cancer care should include a  
22 means for providing cancer survivors with a com-  
23 prehensive care summary and a plan for follow-up  
24 care after primary treatment to ensure that cancer  
25 survivors have access to follow-up monitoring and

1 treatment of possible late effects of cancer and can-  
2 cer treatment.

3 (7) The Institute of Medicine report, “Ensuring  
4 Quality Cancer Care”, described the elements of  
5 quality care for an individual with cancer to in-  
6 clude—

7 (A) the development of initial treatment  
8 recommendations by an experienced health care  
9 provider;

10 (B) the development of a plan for the  
11 course of treatment of the individual and com-  
12 munication of the plan to the individual;

13 (C) access to the resources necessary to  
14 implement the course of treatment;

15 (D) access to high-quality clinical trials;

16 (E) a mechanism to coordinate services for  
17 the treatment of the individual; and

18 (F) psychosocial support services and com-  
19 passionate care for the individual.

20 (8) In its report, “From Cancer Patient to  
21 Cancer Survivor: Lost in Transition”, the Institute  
22 of Medicine recommended that individuals with can-  
23 cer completing primary treatment be provided a  
24 comprehensive summary of their care along with a  
25 follow-up survivorship plan of treatment.

1           (9) Since more than half of all cancer diagnoses  
2 occur among elderly Medicare beneficiaries, the  
3 problems of providing cancer care are problems of  
4 the Medicare program.

5           (10) Shortcomings in providing cancer care, re-  
6 sulting in inadequate management of cancer symp-  
7 toms and insufficient monitoring and treatment of  
8 late effects of cancer and its treatment, are related  
9 to problems of Medicare payments for such care, in-  
10 adequate professional training, and insufficient in-  
11 vestment in research on symptom management.

12           (11) Changes in Medicare payment for com-  
13 prehensive cancer care, enhanced public and profes-  
14 sional education regarding symptom management,  
15 and more research related to symptom management  
16 and palliative care will enhance patient decision-  
17 making about treatment options and will contribute  
18 to improved care for individuals with cancer from  
19 the time of diagnosis of the individual through the  
20 end of the life of the individual.
