1 SEC. 2. FINDINGS.

2 Congress makes the following findings:

1 (1) Health care costs in the United States are
2 rising rapidly. Per capita health spending in the
3 United States is 56 percent higher than the median
4 country that is a member of the Organization for
5 Economic Cooperation and Development.

6 (2) According to the Centers for Medicare and
7 Medicaid Services, total health care spending in the
8 United States in 2004 was \$1,800,000,000,000 and
9 is expected to rise to \$3,600,000,000,000 by 2014.
10 Furthermore, chronic disease accounts for approxi-
11 mately 75 percent of health care costs annually.

12 (3) The United States spends less than 2 per-
13 cent of annual health care expenditures on preven-
14 tion

15 (4) Reducing and preventing the incidence of
16 chronic disease is one means by which to reduce
17 health care costs in the United States.

18 (5) More than 1,700,000 Americans die of a
19 chronic disease each year, accounting for nearly 70
20 percent of all deaths in the United States.

21 (6) The economic impact of chronic disease can
22 be seen in the annual costs associated with cardio-
23 vascular disease and stroke (\$352,000,000,000),
24 obesity (\$117,000,000,000), cancer

1 (\$171,600,000,000), and diabetes
2 (\$132,000,000,000).

3 (7) Obesity related health conditions cost em-
4 ployers nearly \$13,000,000,000 in health care and
5 other indirect costs.

6 (8) Health promotion investments by employers
7 on average yield a return of \$3 for every \$1 invested
8 in a program.

9 (9) Being overweight or obese increase the risk
10 of diabetes, heart disease, stroke, several types of
11 cancer and other health problems.

12 (10) An estimated 65 percent of adults and 15
13 percent of children and adolescents in the United
14 States are overweight or obese.

15 (11) The rates of obesity have doubled in chil-
16 dren and tripled in teens since the 1980's.

17 (12) Almost 40 percent of Americans are sed-
18 entary. More than $\frac{1}{3}$ of young people in grades 9
19 through 12 do not regularly engage in vigorous-in-
20 tensity physical activity.

21 (13) Only 1 in 5 young people eat the rec-
22 ommended 5 daily servings of fruits and vegetables.

23 (14) Food and beverage advertisers collectively
24 spend \$10,000,000,000 to \$12,000,000,000 a year
25 to reach children and youth.

1 (15) Between 1977 and 1995, trips made by
2 walking declined by 40 percent for adults while driv-
3 ing trips increased to almost 90 percent of the total.

4 (16) Virtually all-new users of tobacco products
5 are under the minimum legal age to purchase such
6 products. Every day in America, more than 4,000
7 kids try their first cigarette. Another 2,000 children
8 become new daily smokers.

9 (17) In 2002, nearly a quarter of American
10 adults, 46,000,000 people, smoked cigarettes, includ-
11 ing almost 40 percent of college-aged students.

12 (18) Research consistently shows that smoking
13 cessation services offered as a combination of to-
14 bacco medication therapy and counseling can be one
15 of the most cost-effective health interventions and
16 can reduce smoking-related health care costs.

17 (19) Physical and mental health are inter-
18 connected. Physical conditions often result in mental
19 health complications and depression can manifest
20 itself through physical symptoms.

21 (20) The Surgeon General reported that mental
22 disorders collectively account for over 15 percent of
23 the overall burden of disease from all causes, slightly
24 more than the burden associated with all forms of
25 cancer.

1 (21) One of every 2 people who need mental
2 health treatment in the United States does not re-
3 ceive it. Of children and adolescents 6 to 17 years
4 old who need mental health services, nearly 80 per-
5 cent do not receive it.

6 (22) Early screening and prevention programs
7 in the schools can detect high risk children that are
8 vulnerable to developing mental illness and assist in
9 accessing appropriate services.

10 (23) Children are at greater risk for mental
11 health problems when they experience stressful fam-
12 ily circumstances such as social or economic dis-
13 advantage, severe marital discord, divorce, family vi-
14 olence, parental substance abuse or other mental dis-
15 order or physical illness, and parental absence due
16 to military service, imprisonment, or death.

17 (24) The 2003 President's New Freedom Com-
18 mission on Mental Health urged a transformation of
19 the approach to mental health in the United States,
20 including improving the mental health of children
21 and promoting resilience and prevention.

22 (25) People with disabilities report substantial
23 disparities in health compared with people without
24 disabilities. These disparities are caused by a num-
25 ber of factors, including less access to health care

1 than individuals without disabilities. People with dis-
2 abilities report more days of pain, depression, and
3 anxiety and they have higher rates of obesity.

4 (26) Evidence shows that health promotion pro-
5 grams with exercise, nutrition, and wellness compo-
6 nents targeting people with disabilities can signifi-
7 cantly reduce the incidence of these conditions and
8 lead to healthy outcomes for people with disabilities,
9 as well as save money by reducing the frequency of
10 medical visits.

17 which the report relates; and
